MUT E

SCOTTISH PROVIDENT

ESTABLISHED 1837. **INSTITUTION.** INCORPORATED 1848.

Head Office: 6, ST. ANDREW SQUARE, EDINBURGH.

ITS DISTINCTIVE SYSTEM of **whole Life Assurance** offers to Members the advantage of **with profit** rates which differ but little from the non-profit rates usually charged.

Premiums for £100 payable at Death (with right to share in Surplus).

Age next Birthday.	25	30	35	40	45	50	55
During Life	£1 17 5	£2 2 4	£2 8 6	£2 16 6	£3 8 2	£4 3 2	£5 2 3
25 Payments	2 9 8	2 13 11	2 19 3	3 5 11	3 15 11	4 8 8	5 5 8

The **whole Surplus** goes to the Policy-holders on a system at once safe and equitable—no share being given to those by whose early death there is a **loss** to the Common Fund.

Endowment Assurance.

SPECIAL CLASS WITH SEPARATE FUND.

Policy-holders in this Class share exclusively in the whole Surplus thereof, and Bonuses are allotted on the compound system.

Annuities.

RATES MAY BE HAD ON APPLICATION.

FUNDS EXCEED: £16,250,000.

Branch Offices in Glasgow, Aberdeen, Dundee, Birmingham, Bristol, Cardiff, Leeds, Liverpool, Manchester, Newcastle, Nottingham, Belfast, and Dublin.

LONDON: 3, LOMBARD STREET, E.C. 3; WEST END: 17, PALL MALL, S.W. 1.

[311

The block at side has figured in this well-known publication for 31 consecutive years, and must be well known to the public at home and abroad in connection with the best grades of British woollens. Prices for the moment are fluctuating because of the disorganisation of trade internationally and which depresses the market; but there can be no permanent alleviation while wages and other expenses of manufacture remain stationary. This business has been developed from small beginnings without any ambitious views of extension; it remains, as always, a personal one, the principal desiring no more trade than he can adequately and faithfully deal with, and his customers be benefited. It must not be forgotten that while there is scarcely any limit to the production of inferior qualities of goods, meant for the multitude, there certainly is for the better, interesting only to the select and discriminating few whom we alone cater for, and who have the faculty to appreciate the difference between real cheapness and the counterfeit. W. B.

SHORT SCHEDULE OF STOCK:

HOMESPUNS—Irish and Scotch, peasant-made from all districts; for country wear, sport, and travelling.
SCOTCH CHEVIOTS; for warm, rough suits, and wraps.
IRISH FRIEZES; for heavy travelling ulsters.
FLEECES; for warm, soft, woolly overcoats, and capes.
HOMESPUNS; natural cream, brown, grey, dyed, and colours.
IRISH TWEEDS; for hard useful wear; winter and summer.
TWEEDS; for ordinary town wear; various weights.
WORSTEDS; for business and professional wear. Dress suitings.
SERGES; navy and black; rough and smooth; all seasons.

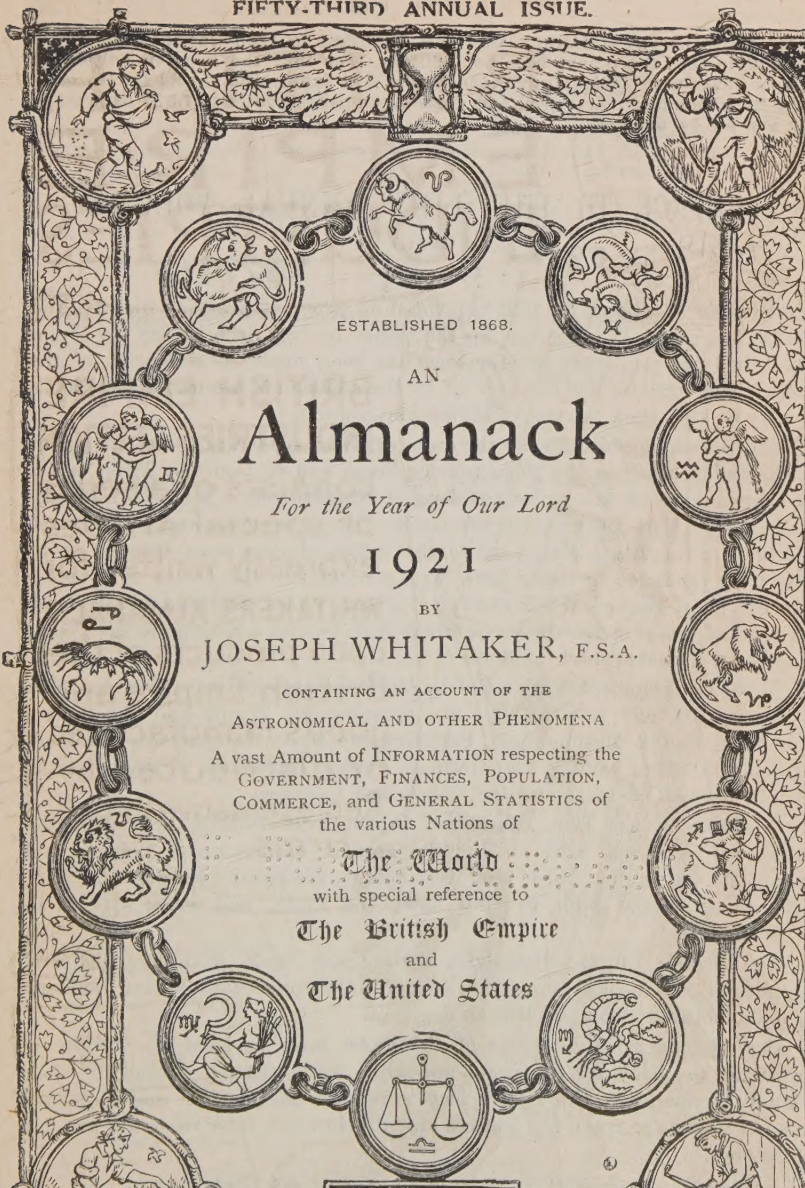
FIFTY-THIRD ANNUAL ISSUE.



ESTABLISHED 1868.

AN

Almanack

For the Year of Our Lord

1921

BY

JOSEPH WHITAKER, F.S.A.

CONTAINING AN ACCOUNT OF THE

ASTRONOMICAL AND OTHER PHENOMENA

A vast Amount of INFORMATION respecting the GOVERNMENT, FINANCES, POPULATION, COMMERCE, and GENERAL STATISTICS of the various Nations of

The World

with special reference to

The British Empire

and

The United States

LONDON

OFFICE: 12, WARWICK LANE,

PATERNOSTER ROW

PRICE SEVEN SHILLINGS AND SIXPENCE.

NOTE.—WHITAKER'S ALMANACK was first published in 1868 (for the year 1869). and since 1887 there have been two editions. For 1921 the Popular Edition (in paper cover with Zodiac design) consists of 578 pages, and is sold for 3*s. net.*; the Half-Bound Edition (in red and green cloth cover) consists of 970 pages, and is sold for 7*s.* 6*d. net.*

PREFACE TO THE LIIIRD ANNUAL VOLUME.

(1921.)

A314 W58 53

157716

WHITAKER'S ALMANACK for 1921 is printed on paper of pre-War quality, and the 1914 price of £18 per ton for the paper having risen to £88 per ton, a small (but not proportionate) increase has been made in the price of the book. This increase has been set off by the addition of a number of articles, as may be seen from the size of the present volume.

The principal additions, in the order of their appearance, are extensions of the Index, a key to the Surnames of Peers and to Courtesy Titles, a list of Companions of the various Orders of Knighthood, a table of Administrations from 1804–1920, an extension of the lists of Societies and Institutions, additions to the Legal Notes and to the tables of Intestates' Estates (with particular reference to Scots law), further entries in the tables of Sporting Records, short Historical Sketches of England, Wales, Scotland and Ireland, accounts of the principal Cities of Great Britain, and additions to the Places of Interest in and around London.

In the Geographical Section the development of Self-Government in India is dealt with, and new articles are provided for Egypt and the Sudan, Cameroon, Kenya, Mesopotamia, Palestine and Haifa, Tanganyika, Togoland, Armenia, Austria, Danzig, the German States, Kurdistan, Russia and the various Russian States, and Syria, Cilicia and Lebanon.

Questions of the Day, introduced in the 1920 edition, are again the subject of paragraph articles, and the annual summaries of Science and Invention, the Drama, Music and Meteorology, are again presented, together with an illustrated guide to Hall Marks on Plate, and other articles of general interest.

The British Empire Industries section has again been included, and supplies miscellaneous information concerning various commodities produced or manufactured under the British flag.

Correspondents in all parts of the globe have assisted the Editor in preparing the book for the press, and while again thanking them for their friendly co-operation, the Editor begs to request that letters may be posted in such time as to reach the address stated below *not later* than the last day of October.

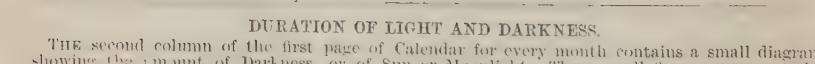
DURATION OF LIGHT AND DARKNESS.

THE second column of the first page of Calendar for every month contains a small diagram showing the amount of Darkness, or of Sun or Moonlight. These small figures represent the twelve hours from 6 P.M. to 6 A.M., and have four divisions, each representing three hours. From Jan. 20 Jan. 25 1921, there is moonlight from 6 P.M. till 6 A.M. (approximately), but from the 4th to the 11th there is no moonlight. In the summer months the Sun comes to our aid.

THE DIAGRAMS USED ARE—



WHITAKER'S ALMANACK, 1921.

BEING THE FIRST YEAR AFTER BISSEXTILE OR LEAP YEAR, AND 11 AND 12 OF KING GEORGE V.

Mean Longitude of Moon's Ascending Node, January 1, 212° 58′ ♏

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

January 1. Day breaks at 6*h.* 2*m.* Civil twilight ends, 16*h.* 52*m.* Night begins, 18*h.* 5*m.* The length of the day from Sunrise to Sunset is 7*h.* 51*m.*

The ending of Civil twilight is here defined as the time when the Sun's centre is 7½° below the horizon. Night begins and Day breaks when it is 18° below.

Jan. 1. 4*h.* Earth at least distance from the Sun, 91.341,000 miles. Perihelion.

Jan. 3–4. Eclipse of Jupiter's satellite IV. See p. 80.

Jan. 4. Jupiter at a stationary point.

Jan. 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m.* 10·6*s.*

Jan. 5. Saturn at a stationary point.

Jan. 9. Mars in conjunction with Venus, 14*h.* 38*m.* ♀ 0° 25′ S.

Jan. 13. Mars in conjunction with ☽, 9*h.* 38*m.* ♂ 5° 23′ S.

Jan. 13. Venus in conjunction with ☽, 12*h.* 33*m.* ♀ 5° 32′ S.

Jan. 16, 19*h.* Mercury in superior conjunction.

Jan. 27. Jupiter in conjunction with ☽, 1*h.* 53*m.* ♃ 5° 3′ N.

Jan. 27. Saturn in conjunction with ☽, 12*h.* 51*m.* ♄ 5° 34′ N.

Jan. 31. *morn.* Occultation of 8 Libræ and *a* Libræ. See p. 81.

Uranus sets, *Jan.* 1, 20*h.* 43*m.*

Neptune rises *Jan.* 1, 18*h.* 45*m.* : *Jan.* 31, 16*h.* 43*m.*

In this month the Mornings increase 25*m.*, the Afternoons 46*m.*

Constellations near the South meridian at 22*h.* : Perseus, Taurus, Eridanus, Auriga, Orion, Gemini, Canis Minor, Canis Major.

The 24-hour Clock.—In this issue of WHITAKER'S ALMANACK, the hours of the day are numbered from 0 to 23, the hour after midnight being 0, and the abbreviations A.M. and P.M. are not now used. This "twenty-four hour" method has been in use in some other countries for some years, and was adopted by the British Services during the war. In 1919 the Home Secretary appointed a Committee to consider and report as to the advisability of adopting this method in the United Kingdom for official and other public purposes, and as the Committee decided to recommend the scheme, there appears to be sufficient reason for making this important change in this Almanack. The change from former practice is made by adding 12 to the number which indicated the hours from

☿ Mercury rises shortly before the Sun at the beginning of the month. At the end it will be an evening star setting less than an hour after the Sun in the W.S.W.

♀ Venus will be seen in the south-west in the early evening. It moves from the constellation Capricornus, through Aquarius into Pisces. Its brightness increases to magnitude − 4.0.

♂ Mars is an evening star near Venus, higher in the first part of the month but lower and to the right at the end.

♃, ♄ Jupiter and Saturn rise in the late evening north of East. Jupiter is in Leo, Saturn on the confines of Virgo, to the left of and lower than Jupiter. Magnitudes: Jupiter, − 1.9; Saturn, + 1.1.

1 to 11 in the afternoon and evening, the second hour after noon being now called 13, and that immediately before midnight 23.

The Lords Commissioners of the Admiralty have already given instructions that the hours of the day shall be numbered in accordance with this method in the "Nautical Almanac," beginning with the issue for the year 1925. Until that date the astronomical day, which begins at noon, will be used as hitherto, and for that reason the system of the column "Mean Time at 0h. Sidereal Time" in the second page of each month is not altered, but the hours are counted from 0 to 23, beginning at noon.

Mean Longitude of Moon's Ascending Node, February 1, 211° 20′ ♏

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

February 1. Day breaks at 5*h*. 44*m*. Civil twilight ends at 17*h*. 35*m*. Night begins at 18*h*. 44*m*. The length of the Day is 9*h*. 6*m*.

Feb. 1. Neptune in Opposition, 18*h*. Distance 2,701,600,000 miles.

Feb. 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m*. 7·6*s*.

Feb. 9. Mercury in conjunction with ☽, 16*h*. 0*m*. ☿ 4° 34′ S.

Feb. 10. Venus at greatest elongation, 4*h*. 46° 46′ E.

Feb. 11. Mars in conjunction with ☽, 9*h*. 43*m*. ♂ 3° 19′ S.

Feb. 12. Venus in conjunction with ☽, 4*h*. 41*m*. ♀ 0° 17′ S.

Feb. 13, *aft.* Occultation of 54 Ceti. See p. 81.

Feb. 15. Mercury at greatest elongation, 11*h*. 18° 8′ E.

Feb. 20, *aft.* Occultation of A^1 A^2 and 60 Cancri See p. 81.

Feb. 21. Mercury at a stationary point.

Feb. 22. Saturn's ring reappears. See note, p. 38.

Feb. 23. Jupiter in conjunction with ☽, 8*h*. 15*m*. ☾ 5° 12′ N.

Feb. 23. Eclipse of Jupiter's Satellite IV. See p. 80.

Feb. 23. Saturn in conjunction with ☽, 20*h*. 55*m*. ♄ 5° 37′ N.

Feb. 25. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m*. 5·5*s*.

In this month the Mornings increase 50*m*.; the Afternoons 49*m*. Neptune rises Feb 1. 16*h*. 39*m*.; sets 7*h*. 51*m*. morn. Feb. 28. 6*h*. 3*m*.

The Zodiacal light may be seen at the end of this month, as the moon will then be absent in the evening.

Constellations near the S. meridian at 22*h*.: Auriga, Taurus, Orion, Gemini, Canis Minor, Monoceros, Canis Major, Argo, Cancer, Hydra.

Note.—The arrangement of the Table of Moonrising, southing, and setting on this page is as in last year's issue of this Almanack. The times in the second column are those of Moonrise on the day of the month shown by the adjacent figure in the first column, the hours being expressed according to the method described in the note on p. 26. The figures in the third and fourth columns show the time of the southing and of the setting *which next follow that rising*, and these sometimes happen

* The days thus indicated throughout the Almanack are those on which High Tides may be expected. Strong northerly winds in the North Sea and a low barometer with heavy rains in the counties drained by the Thames will probably cause a higher rise of the river, and the low-lying riverside districts to be flooded.

MORNING AND EVENING STARS.

☿ Mercury is an evening star throughout February in the constellation Aquarius, and in the middle of the month may be seen by the naked eye about 6 o'clock low down south of west

♀ Venus is also an evening star and remains in the constellation Pisces. This planet is a bright object in the south-west sky in the twilight and sets north of west. Magnitude, −4·0 to −4·2.

♂ Mars is also in the constellation Pisces, below and to the right of Venus. It sets earlier, nearly due west. Magnitude, +1·5.

♃ ♄ Jupiter and Saturn rise during the early evening. Both are moving from left to right in the constellation Leo and are in line with the star Regulus, Jupiter, much the brightest of the three objects, being in the middle. Magnitude: Jupiter, −2·0; Saturn, +1·0.

after midnight of the day indicated. In such cases the figures are in heavy type. It is therefore to be remembered, in using this Table, that these distinctive figures always indicate a time *on the morrow of the day of its line.* To one day in each lunation there are necessarily no entries, but there are no omissions. On the lines immediately following that with no entry the times given for moonrise are in the early morning of the day to which they are assigned. A similar system is followed in the Tables of Rising, Southing, and Setting of the Planets on this and other pages.

Apparent Right Ascension and Declination of Polaris.

Mean Longitude of Moon's Ascending Node, March 1, 209° 51′ ♎.

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

March 1. Day breaks at *4h.* 55*m.* Civil twilight ends *18h.* 21*m.* Night begins *19h.* 30*m.* The length of the Day is *10h.* 50*m.*

Mar. 3. Mercury in Inferior conjunction *2h.*

Mar. 5, *2h.* Jupiter in Opposition. Distance, 411,150,000 miles.

Mar. 5. Mean time taken by Sun's semidiameter in crossing the meridian, *1m.* 5*·0s.*

Mar. 12. Mars in conjunction with ☽, *7h.* 5*m.* ♂ 0° 52′ S.

Mar. 12. Eclipse of Jupiter's Satellite IV. See p. 80.

Mar. 12, *13h.* Saturn in Opposition. Distance, 783,400,000 miles.

Mar. 13. Venus in conjunction with ☽, *3h.* 42*m.* ♀ 5° 40′ N.

Mar. 17. *8h.* Venus at greatest brilliancy.

Mar. 21. Sun enters the sign Aries (Spring Equinox), *3h.* 51*m.*

Mar. 22. Jupiter in conjunction with ☽, *12h.* 57*m.* ☽ 5° 27′ N.

Mar. 23. Saturn in conjunction with ☽, *3h.* 55*m.* ♄ 5° 48′ N.

Mar. 25. Mean time taken by Sun's semidiameter in crossing the meridian, *1m.* 4*·2s.*

Mar. 28. Eclipse of Jupiter's Satellite IV. See p. 80.

Mar. 30, *10h.* Mercury at greatest elongation. 27° 50′ W.

Mar. 31, *21h.* Venus at a stationary point.

Neptune sets *Mar.* 1, *5h.* 59*m.* *Mar.* 31, *4h.* 0*m.*

The Zodiacal light may be seen at the beginning and end of this month as the Moon will then be absent from the evening sky.

In this month the Mornings increase 69*m.*; the Afternoons 51*m.*

Constellations near the S. meridian at *22h.*: Gemini, Canis Minor, Monoceros, Argo, Lynx, Cancer, Hydra, Leo, Crater.

Planetary Oppositions.—Jupiter and Saturn are both in Opposition early in this month in the constellation Leo, the two phenomena being nearly contemporaneous, because the planets have been brought together by their orbital motion, as is mentioned on a later page. Last year Jupiter was in Opposition on February 3, being in Cancer. The Opposition of Jupiter happens a month later year by year because Jupiter moves forward through about a twelfth

Morning and Evening Stars.

☿ Mercury is a morning star during the month, rising less than an hour before the Sun.

♀ Venus is a brilliant object in the evening sky. The stars of Orion and the constellations which surround it always make an attractive picture in the spring twilight; and this year Venus, which is now in Aries, will add to its splendour. Magnitude at greatest brilliancy on March 17, −4·3.

♂ Mars sets before 21h. W. by N., at the beginning of the month; and more northward later.

♃, ♄ Jupiter and Saturn being in Opposition in the beginning of the month, are in the S. about midnight and above the horizon from sunset until dawn. They will be seen S. of E. in the twilight. Both planets are moving westward, approaching Regulus. Magnitudes: Jupiter, −2·0; Saturn, +0·8 at Opposition (March 12).

of its orbit around the Sun in a year, and the earth must therefore describe more than one revolution, or in other words, more than a year must elapse before the Earth is again in line with the Sun and Jupiter. For similar reasons Saturn is in Opposition about a fortnight later in each year than the preceding. Jupiter is nearest to the Sun when in Heliocentric longitude 12°. The Earth is in that longitude at the beginning of October, and Jupiter will be brightest when Opposition happens about that date. The present is therefore not a bright Opposition. Saturn is nearest the Earth at an Opposition which happens in December, but its brightness is more affected by the phase of the rings spoken of in a note on p. 39.

RAIN FELL IN APRIL, 1920.

on 21 days; total fall 2·66 inches; *above* the average by 1·00 inch.

Summer Time.—*See* Note p. 40 and p. 92.

MONTHLY NOTES.

April 1. Refreshment House Licences to be renewed. Clerks of the Peace and Town Clerks send registration precepts to Overseers before 15th inst.

5. Dividends on Consols, &c., due. Financial year, 1920-1921, for Treasury purposes ends.

7. Fire Insurances must be paid.

–. Quarter Sessions to be held this week unless otherwise fixed.

14. Parish Councils to hold their annual meeting on or within seven days of this date.

18. Edinburgh Spring Holiday.

24. Census Day, 1921.

Mean Longitude of Moon's Ascending Node, April 1, 208° 12′ ♎

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

April 1. Day breaks at 3*h*. 37*m*. Civil twilight ends 19*h*. 15*m*. Night begins 20*h*. 30*m*. The length of the Day is 12*h*. 53*m*.

Apr. 5. Mean time taken by Sun's semidiameter in crossing the meridian 1*m*. 4·4*s*.

Apr. 6. Mercury in conjunction with ☽ 7*h*. 19*m*. ☿ 5° 49′ S.

Apr. 8, *morn.* Annular Eclipse of the Sun. Visible as Partial Eclipse at Greenwich. See p. 80.

Apr. 9. Venus in conjunction with ☽ 17*h*. 57*m*. ♀ 8° 28′ N.

Apr. 10. Saturn's ring-plane passes through Sun. See note.

Apr. 10. Mars in conjunction with ☽ 2*h*. 54*m*. ♂ 1° 30′ N.

Apr. 18. Jupiter in conjunction with ☽ 16*h*. 50*m*. ♃ 5° 36′ N.

Apr. 19. Saturn in conjunction with ☽ 9*h*. 13*m*. ♄ 5° 56′ N.

Apr. 22, *morn.* Total eclipse of the Moon. Not visible at Greenwich. See p. 80.

Apr. 22, 18*h*. Venus at Inferior conjunction.

Apr. 25. Mean time taken by Sun's semidiameter to cross the meridian 1*m*. 5·4*s*.

Neptune sets *Apr.* 1, 3*h*. 56*m*.; *Apr.* 30. 2*h*. 2*m*.

The Zodiacal light may be seen after 20*h*. 30*m*., at beginning of this month, the Moon then being absent.

In this month the Mornings increase 1*h*. 1*m*., the Afternoons 48*m*.

Constellations near the South meridian at 22*h*.: Cancer, Hydra, Leo, Leo Minor, Crater, Corvus, Virgo.

The Solar Eclipse of April 8 is with one exception the largest that has been seen in London for at least 50 years, the exception being the eclipse that happened on *April* 17, 1912, when nine-tenths of the Sun's diameter was obscured, and the magnitude on this occasion is not very different. The eclipse in 1912 was seen annular from the neighbourhood of Paris, and it is predicted that the eclipse on *April* 8 will be seen annular from a strip of the earth about 140 miles wide the central line of which passes through the extreme north-west point of Scotland.

Saturn's Ring.—Analogous to the passage of the plane of the Earth's equator through the Sun at the terrestrial Equinoxes, the plane of Saturn's ring passes through the Sun twice during a revolution of the planet in its orbit. This will happen on the 10th of this month. The last

MORNING AND EVENING STARS.

☿ Mercury is a morning star, but rises not long before the Sun.

♀ Venus is a bright evening star at the beginning of the month, becomes fainter and sets earlier, and being at Inferior conjunction on the 22nd, it rises and sets before the Sun in the last week of April. It moves in retrograde direction from the constellation Aries into Pisces.

♂ Mars lingers in the evening sky. It moves eastward somewhat rapidly, passing from the constellation Aries into Taurus, and sets in the W.N.W. a few minutes be ore 21*h*.

♃, ♄ Jupiter and Saturn are to be seen in the evening twilight in the south-east sky. They are in the west at altitude 15° about 3 o'clock in the morning early in the month. Both are moving westward in the constellation Leo. Magnitudes: Jupiter, −2·0 to −1·8; Saturn, +0·9 to +1·0.

occasion was on July 26, 1907. The plane similarly passed through the Earth on 1920 November 7, 1921 February 22, and will again on 1921 August 3. Between the first two dates the south side was illuminated by the Sun, and the Earth was on the north side. Between February 22 and April 10 the Sun and Earth are on the south side. From April 10 to August 3, the north side will be illuminated, but the Earth will be on the south side. In the intervals when the Sun and Earth are on opposite sides of the plane the Ring system is said to be invisible, but has been found not to be entirely so.

Mean Longitude of Moon's Ascending Node, May 1, 206° 37′ ♎.

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

May 1. Day breaks at 2*h.* 4*m.* Civil twilight ends at 20*h.* 11*m.* Night begins 21*h.* 50*m.* The length of the Day is 14*h.* 45*m.*

May 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1*h.* 6·1*m.*

May 6. Venus in conjunction with ☽, 4*h.* 45*m.* ♀ 2° 55′ N.

May 6. Jupiter at a stationary point.

May 7. Mercury in conjunction with ☽, 13*h.* 59*m.* ☿ 1° 0′ N.

May 8. Mars in conjunction with ☽, 22*h.* 4*m.* ♂ 3° 27′ N.

May 10. Mercury in Superior conjunction, 11*h.*

May 11. Venus at a stationary point.

May 15. Jupiter in conjunction with ☽, 21*h.* 58*m.* ♃ 5° 28′ N.

May 16. Saturn in conjunction with ☽, 13*h.* 48*m.* ♄ 5° 52′ N.

May 17–18. Jupiter's Satellite IV. in eclipse. See p. 80.

May 20. Mercury in conjunction with Mars, 3*h.* 22*m.* ☿ 1° 3′ N.

May 20, *aft.* Occultation of ν Librae. See p. 81.

May 21, 17*h.* Saturn at a stationary point.

May 25. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m.* 7·7*s.*

May 28. Venus at greatest brilliancy.

The disc of Venus is crescent during the month; appearing like the moon after third quarter.

Neptune sets May 1, 1*h.* 58*m.* May 31, 23*h.* 57*m.*

In this month the Mornings increase 43*m.*; the Afternoons 44*m.*

Constellations near the S. meridian at 22*h.*: Leo, Leo Minor, Crater, Hydra, Corvus, Virgo, Boötes, Libra.

Venus at Greatest Brilliancy.—Venus will be very bright in the early morning at the end of May as she was in the evenings in March. Similar epochs of great brilliancy occurred in August and October of the year 1919. This periodic maximum brightness happens when the planet is near the Earth (distant 40 or 41 million miles). At inferior conjunction on April 22 she will be nearer

Time of High Water at the undermentioned Places—

MORNING AND EVENING STARS.

☿ Mercury rises nearly with the Sun in the first week of May, and is an evening star after superior conjunction on the 10th. It may be seen by naked eye in the last week of the month, about 21h. above the north-west horizon.

♀ Venus is a morning star rising an hour or more before the Sun, N. of E. It will be at greatest brilliancy on the 28th, when its magnitude will be − 4·2.

♂ Mars is still above the horizon for a short time after sunset, setting N.W. by W. It passes between Aldebaran and the Pleiades about the 10th.

♃, ♄ Jupiter and Saturn are in the western sky in the late evening, and set before sunrise. They change position little during the month, Jupiter being nearly midway between Saturn and Regulus.

by several million miles, but will be practically invisible, since her unilluminated hemisphere will be presented to us. In March and May though only a part of the illuminated surface is to be seen (like the crescent Moon), since the planet is near, the largeness and brightness of the disc compensate for the small fraction of it seen illuminated. Hence the appearance noted. Venus may sometimes be seen even when near inferior conjunction if she is higher in the sky than the Sun, as she was on April 22.

Apparent Right Ascension and Declination of Polaris.

Mean Longitude of Moon's Ascending Node, June 1, 204° 58′ ♎.

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

June 1. Civil twilight ends at 21*h*. 6*m*. There is no closed night in this month in the latitude of London. The length of the Day from Sunrise to Sunset on June 1 is 16*h*. 14*m*. Its length is nearly 16*h*. 34*m*. from June 19 to 23.

June 3. Venus in conjunction with ☽, 3*h*. 4*m*. ♀ 1° 36′ S.

June 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m*. 8·4*s*.

June 6. Mars in conjunction with ☽, 16*h*. 57*m*. ♂ 4° 54′ N.

June 8. Mercury in conjunction with ☽, 0*h*. 43*m*. ☿ 6° 37′ N.

June 11, *morn*. Mercury at greatest elongation. 24° 13′ E.

June 12. Jupiter in conjunction with ☽, 6*h*. 28*m*. ♃ 5° 5′ N.

June 12. Saturn in conjunction with ☽, 19*h*. 47*m*. ♄ 5° 35′ N.

June 21. Sun enters the sign Cancer (Summer Solstice), 23*h*. 36*m*.

June 25. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m*. 8·7*s*.

June 29. Mars in conjunction.

Uranus rises June 1, 0*h*. 51*m*.; June 30, 22*h*. 53*m*.

Neptune sets June 1, 23*h*. 53*m*.

The disc of Venus is crescent during the month, increasing to nearly half full at the end.

In this month the Mornings increase 6½*m*. up to the 18th, and then decrease 4*m*. The Afternoons increase 14*m*. up to the 26th, and then decrease slightly.

Constellations near the S. meridian at midnight: Corona, Hercules, Ophiuchus, Serpens, Scorpius, Lyra, Aquila, Sagittarius.

The Longest Day. — Though there is but slight difference in the length of the interval between sunrise and sunset on the days about June 21, there is in general one of these days which is a few seconds longer than any other. This is the day on which the Summer Solstice falls, and at the end of a century is June 20 or 21, whilst at the beginning it is a day later, and June 21 or 22 is the longest day. The reason for this difference in date may be briefly stated. Because the Tropical year is not an integral number of days, the solstice falls later in the calendar year by year by six hours, *nearly*. It is not permitted to be very late because the intercalation of the extra day in leap year brings it back one whole day. This whole day is too much, because the solstice is later yearly by *not quite* 6 hours, and hence, on the

MORNING AND EVENING STARS.

☿ Mercury is an evening star, and may be seen in the twilight in the first half of the month, low down in the N.W. by W.

♀ Venus is a morning star, rising two hours or less after midnight E.N.E. Mag., −4·2 to −4·0.

♂ Mars, in conjunction on the 28th, rises and sets nearly with the Sun.

♃, ♄ Jupiter and Saturn are in the western sky during the evening and set soon after midnight, or earlier at the end of the month. Both are moving from right to left; Jupiter rather the faster, so that it is approaching Saturn. Magnitudes in the middle of the month; Jupiter, −1·5; Saturn, +1·3.

whole, it falls earlier in the calendar as the century progresses, and the dates of the longest day at the beginning and end are as stated. In this year it happens that the solstice occurs only 24 minutes before midnight of June 21, and the difference in length of the two days is scarcely appreciable.

This acceleration of the date during the century is corrected by the omission of the intercalary day in the centennial year, which puts the date a day later. But this does more than is necessary, and a further compensation is made by making the fourth centennial year a leap year.

Mean Longitude of Moon's Ascending Node, July 1, 203° 23′ ♎.

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

July 1. Civil twilight ends 21*h.* 22*m.* In this month there is no closed night at Greenwich till after the 21st, when the Sun will be 18° below the horizon at midnight. The length of the Day on July 1 is 16*h.* 29*m.*

July 1, *aft.* Venus at greatest elongation, 45° 44′ W.

July 2, *morn.* Occultation of Venus by the Moon. Conjunction, 5*h.* 36*m.* See p. 81. ♀ 0° 43′ S.

July 4, 8*h.* The Earth at maximum distance from the Sun—94,453,000 miles. Aphelion.

July 5. Mars in conjunction with ☽, 11*h.* 22*m.* ♂ 5° 48′ N.

July 5. Mercury in conjunction with ☽, 20*h.* 5*m.* ☿ 0° 34′ N.

July 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m.* 8·4*s.*

July 8, *morn.* Mercury in Inferior conjunction.

July 9. Jupiter in conjunction with ☽, 19*h.* 17*m.* ♃ 4° 32′ N.

July 10. Saturn in conjunction with ☽, 4*h.* 56*m.* ♄ 5° 8′ N.

July 19, *morn.* Mercury at a stationary point.

July 23. Uranus in conjunction with ☽, 17*h.* 3*m.* ♅ 4° 24′ S.

July 25. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m.* 7·0*s.*

July 28, *aft.* Mercury at greatest elongation, 19° 40′ W.

July 31. Venus in conjunction with ☽, 18*h.* 24*m.* ♀ 2° 8′ N.

Uranus rises July 1, 22*h.* 49*m.*; July 31, 20*h.* 50*m.*

Meteors of the Perseid stream begin to appear in July.

In this month the Mornings decrease 34*m.*, and the Afternoons 29*m.*

Constellations near the S. meridian at midnight: Hercules, Ophiuchus, Serpens, Lyra, Cygnus, Aquila, Delphinus, Equuleus, Aquarius, Capricornus, Sagittarius.

Occultation of Venus.—In her monthly journey round the sky, the Moon necessarily passes in front of and occults the more distant stars. The phenomenon is less frequent than might be at first thought expected, speaking of the bright stars, and it is still rarer in the case of the planets. In the early morning of July 2, about 10 minutes after sunrise, Venus being nearly due E., at an altitude of about 25°, will be occulted by the Moon then in its last quarter. The disappearance will take place at the illuminated edge of the Moon, the re-appearance at the unilluminated, and

Time of High Water at the undermentioned Places—

MORNING AND EVENING STARS.

☿ Mercury sets before the Sun during the greater part of the month. It rises with the Sun on the 12th, and is a morning star after that date rising about N.E. by E..

♀ Venus is a morning star, and rises unusually early. It is in the constellation Taurus, and will pass between Aldebaran and the Pleiades about the 10th. Magnitude, −4·0 to −3·7.

♂ Mars, which is passing through the constellation Gemini, begins to be a morning star. It rises an hour before the Sun at the end of the month N.E. by E.

♃, ♄ Jupiter and Saturn are in the western sky for a short time after sunset. The two planets are nearly due west at altitude about 10° at 21*h.* in the middle of the month. Magnitudes: Jupiter, −1·4; Saturn, +1·4.

the first may be seen by naked eye, but the reappearance happens an hour after sunrise. Stars when occulted disappear and reappear instantaneously, because they have no appreciable disc, being so far from us; but Venus will occupy 30 or 40 seconds in the process, and the disappearance and reappearance of the two edges will be seen as distinct phenomena in a telescope. The last occasion of an occultation of Venus was 1898, May 22, when the reappearance occurred 20 minutes before sunset, and the planet, easily visible to the naked eye, made a pleasing picture by its proximity to the crescent Moon.

Apparent Right Ascension and Declination of Polaris.

Meteors of the Perseid stream are expected this month, the nights of most abundance being from the 10th to the 12th, but moon light on these nights may interfere with successful observation.

In this month the Mornings decrease 47*m.*, and the Afternoons 59*m.*

Constellations near the S. meridian at 22*h.* are those which were in that position at midnight in July: Hercules, Ophiuchus, Serpens, Lyra, Cygnus, Aquila, Delphinus, Equuleus, Aquarius, Capricornus, Sagittarius.

Shooting Stars.—Of all the objects that are seen in the sky the nearest to us are the meteors or shooting stars. These are believed to be small fragmentary bodies, moving in orbits in space, controlled by the Sun's attractions just as are the large planets. In some cases the orbit of one of these small bodies, or a group of such, intersects the orbit of the earth, and when the meteor rushes through the earth's atmosphere it incandesces by friction and is made visible to us. From observation it is found that a shooting star when first seen may be 70 or 80 miles above the earth and 50 miles at the end of its visible path which may be 40 or 50 miles long, and is traversed in a second or so. The rapid

Morning and Evening Stars.

☿ Mercury is a morning star, rising more than an hour before sunrise in the first week of the month. It rises and sets nearly with the Sun at the end.

♀ Venus continues to be a morning star, as it will be until Superior conjunction in 1922 February. It passes through the constellation Gemini into Cancer during August. Magnitude, − 3·7 to − 3·5.

♂ Mars, in the constellation Cancer, is also a morning star, rising in the dawn with Mercury at the beginning of the month. On the morning of the 11th the two planets rise close together in the N.E., by E., Mars being the higher.

♃, ♄ Jupiter and Saturn are still above the horizon for an hour after sunset and set north of west. Both planets are moving from right to left, Jupiter considerably the faster.

shooting stars are believed to be quite small bodies which pulverise, the remnants finding their way through the atmosphere to earth. Occasionally bodies of larger size meet our atmosphere which may burst or break up, and the fragments come to earth as meteorites. Shooting stars congregate in swarms, the individual members of which describe similar orbits, and as they pass through our atmosphere appear to radiate from some one point of the sky by an effect of perspective, and so form a meteor shower. The Perseid Meteor Shower, which begins in July or possibly in June, and has its maximum in August, is the most interesting and attractive of the year.

In these columns, which show the order in which Jupiter's four larger Satellites are ranged with respect to the planet, the open circle ○ indicates the planet's disc, the black circle ● shows that the satellite is transit, is waiting to enter, or is in eclipse or is occulted, whilst the sign ⊥ shows that it is in transit across the disc.

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

September 1. Day breaks at 3*h.* 7*m.* Civil twilight ends at 19*h.* 36*m.* Night begins, 8*h.* 54*m.* The length of the Day is 13*h.* 33*m.*

Sept. 2. Mercury in conjunction with ☽, 22*h.* 29*m.* ☿ 3° 53′ N.

Sept. 3. Jupiter in conjunction with ☽, 7*h.* 19*m.* ♃ 3° 19′ N.

Sept. 3. Saturn in conjunction with ☽, 8*h.* 57*m.* ♄ 4° 15′ N.

Sept. 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m.* 4·0*s.*

Sept. 6, 16*h.* 57*m.* Mercury and Jupiter in conjunction. ☿ 0° 19′ S.

Sept. 7, 4*h.* 29*m.* Mercury and Saturn in conjunction. ☿ 1° 25′ S.

Sept. 13, 11*h.* 44*m.* Venus and Neptune in conjunction. ♀ 0° 5′ N.

Sept. 14, 16*h.* 48*m.* Jupiter and Saturn in conjunction ♃ 1° 2′ S.

Sept. 21, 13*h.* Saturn in conjunction with Sun.

Sept. 22, 22*h.* Jupiter in conjunction with Sun.

Sept. 23. Sun enters the Sign Libra, 14*h.* 20*m.* (Autumn Equinox.)

Sept. 29. Venus in conjunction with ☽, 8*h.* 4*m.* ♀ 4° 49′ N.

Sept. 29. Mars in conjunction with ☽, 12*h.* 13*m.* ♂ 5° 0′ N.

Uranus rises Sept. 1, 18*h.* 42*m.*; sets Sept. 30, 3*h.* 14*m.*

In this month the mornings decrease 47*m.*, and the Afternoons 1*h.* 6*m.*

Constellations near the S. meridian at 22*h.*: Lyra, Cygnus, Aquila, Delphinus, Aquarius, Capricornus, Equuleus, Pegasus, Pisces.

APPARENT RIGHT ASCENSION AND DECLINATION OF THE PLANETS AT NOON.

Mean Longitude of Moon's Ascending Node, September 1, 200° 6′ ♌

The Harvest Moon.—It will be seen that the interval between successive entries in the column of Moonrise is only about 23 minutes near Full Moon in this month (Sept. 15–18), which is a less interval than in other parts of the column. This Full Moon is called the Harvest Moon.

The orbital motion of the Moon causes her to move among the stars rather rapidly from West to East, and she comes to the meridian of any place, or is due South, about 50 minutes later night by night. For this reason alone she would rise later night by night by this amount, but the time of rising (except at places on the Equator) is affected by her distance north or south of the celestial equator. In North latitude she rises earlier, with increased north Dec. There is a certain period in each lunation when the Moon is moving northward rather rapidly, and this causes an acceleration which modifies the 50 minutes' retardation in the time of rising already mentioned, and in a high latitude she will

MORNING AND EVENING STARS.

☿ Mercury will be above the horizon for a short time after sunset during the month. Conjunctions of this planet with Jupiter and Saturn are noted on the opposite page.

♀ Venus passes from Cancer into Leo, being near the star Regulus in the morning of the 25th. It will be seen due East between 4 and 5 o'clock in the morning, Magnitude, − 3·5 to − 3·4.

♂ Mars is also a morning star, not far from Venus and near Regulus on the 17th.

♃ ♄ Jupiter and Saturn are in conjunction—that is, they are nearly in line with the Earth on the 14th, when the two planets will be separated in the sky by twice the breadth of the Moon. Being near conjunction with the Sun the planets set soon after sunset, and the near approach is not likely to be generally noticed. (See p. 66).

rise nearly at the same time for several nights in succession at this epoch of northward movement. This happens in every lunation, and in general passes unnoticed; but in the September lunation it happens when the Moon is full, and then the Moon, full or nearly so, rises about sunset on two or three consecutive nights. This phenomenon is known as the Harvest Moon. The precise details vary in different years according to circumstances, and in some years the retardation on successive nights may be much less than 23 minutes. Also, for certain reasons, two Full Moons may have equal claims (compare August 20), but the term is always applied to the Full Moon nearest to the Autumnal Equinox. See note, p. 90.

Mean Longitude of Moon's Ascending Node, October 1, 198°31′ ♑.

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

October 1. Day breaks at 4*h.* 8*m.* Civil twilight ends at 18*h.* 23*m.* Night begins, 19*h.* 31*m.* The length of the Day is 11*h.* 36*m.*

Oct. 1. Saturn in conjunction with ☽, 0*h.* 55*m.* ♄ 3° 57′ N.

Oct. 1. Jupiter in conjunction with ☽, 3*h.* 19*m.* ♃ 2° 46′ N.

Oct. 1. Total eclipse of the Sun. Invisible at Greenwich. See p. 80.

Oct. 3. Mercury in conjunction with ☽, 6*h.* 42*m.* ☿ 4° 3′ S.

Oct. 3. Venus in conjunction with Mars, 11*h.* 18*m.* ♀ 0° 11′ S.

Oct. 7, *aft.* Mercury at greatest elongation. 25° 23′ E.

Oct. 13. Uranus in conjunction with ☽, 6*h.* 37*m.* ♅ 4° 32′ S.

Oct. 16. A partial eclipse of the Moon (nearly total), visible at Greenwich. See p. 80.

Oct. 22, 7*h.* 55*m.* Venus and Saturn in conjunction. ♀ 0° 35′ S.

Oct. 25. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m.* 3·9*s.*

Oct. 25, 16*h.* 12*m.* Venus and Jupiter in conjunction. ♀ 0° 32′ N.

Oct. 28. Mars in conjunction with ☽, 1*h.* 18*m.* ♂ 3° 38′ N.

Oct. 28. Saturn in conjunction with ☽, 15*h.* 24*m.* ♄ 3° 41′ N.

Oct. 28. Jupiter in conjunction with ☽, 22*h.* 0*m.* ♃ 2° 14′ N.

Oct. 29. Venus in conjunction with ☽, 3*h.* 56*m.* ♀ 2° 25′ N.

Oct. 30. Mercury in conjunction with ☽, 23*h.* 58*m* ☿ 2° 36′ S.

Oct 31, 10*h.* Mercury in Inferior conjunction.

Uranus sets Oct. 1, 3*h.* 10*m.*; Oct. 31, 1*h.* 8*m.*

Neptune rises Oct. 1, 1*h.* 7*m.*; Oct. 31, 23*h.* 5*m.*

In this month the Mornings decrease 51*m.*, and the Afternoons 1*h.* 3*m.*

The Zodiacal light may be seen before dawn in the early part of this month, and in the few days at the end when the Moon is absent.

Constellations near the S. meridian at 10 p.m.: Delphinus, Equuleus, Aquarius, Capricornus, Pegasus, Andromeda, Pisces, Piscis Australis, Cetus.

The Pleiades. — This specially characteristic feature of the winter, which is prominent in the eastern sky in late evening in October, is a loose cluster of bright stars. Nine of them are known by the names of the mythological Atlas and Pleione and their seven daughters, Alcyone, Merope, Maia, Celœno, Electra, Taygeta, Asterope, and a keen sight may be able to distinguish these nine

MORNING AND EVENING STARS.

☿ Mercury is above the horizon for a short period after sunset at the beginning of the month. It approaches the Sun and is at Inferior conjunction on the 31st

♀ ♂ ♃ ♄ The four planets Venus, Mars, Jupiter and Saturn are all Morning stars in the last three months of this year, and move almost wholly in the constellations Leo and Virgo. At 5 o'clock in the morning in the middle of October the four planets will lie in a nearly vertical line slightly South of East. Jupiter and Saturn will be near the horizon in Virgo, Mars will be at an altitude of 20°, and on the 16th Venus will be nearly midway between Mars and the two planets first named. Venus moves towards Jupiter and Saturn and will be close to Saturn on the 22nd, and to Jupiter on the 25th, so that between these dates Venus will lie between the other two planets, all being within 10° of the horizon at 5 o'clock with Mars about 10° higher. This close congregation of the planets is noteworthy. Mars is of second magnitude; Saturn + 1·2; Jupiter − 1·2, or nearly equal to Sirius.

as separate stars. Six are easily counted, and it is said that some persons have been able to see twelve or even fourteen separately. Photographs with large telescopes show that each of the brighter stars is surrounded by nebulosity with extensions which join a star to its neighbours. Because of this nebulosity, and because the large stars have almost identical proper motion, it is believed that these stars form an actual cluster in space, and that they are not seen as a group in the sky merely because they are in the same line of vision.

Apparent Right Ascension and Declination of Polaris.

RAIN FELL IN NOVEMBER, 1919.

on 16 days; total fall, 0·94 inches. *Below* the average by 1·33 inch.

MONTHLY NOTES.

November 1. Latest day for receiving corrections for Whitaker's Almanack.

– Fox-hunting begins. Salmon-fishing with rod and line ends (with some local exceptions).

– Ordinary day of election of Borough Councillors.

– Holiday at London Stock Exchange.

9. Lord Mayor's Day. Mayors and Aldermen of Boroughs to be elected and Sheriffs appointed.

12. County Sheriffs for next year nominated.

15. Solicitors', notaries', proctors', and sworn clerks' certificates expire. See Note, Dec. 15.

Planetary Conjunctions. — The planets Jupiter and Saturn, which have been drawing together in the last few years, are this year at their nearest, and on September 14 these two planets were to be seen in the sky separated by only a degree. This resulted from the fact that Jupiter and Saturn were in Heliocentric conjunction or had been brought by their orbital motion into line with the Sun on August 22 last. This happens about every twenty years. The last heliocentric conjunction occurred in September 1901, so that a close approach is only to be seen three or four times in a lifetime. Jupiter and Saturn have been joined by Mercury, Venus and Mars in turn, and at the beginning of November the four, Venus, Mars, Jupiter and Saturn, are included within a space of 20°

MORNING AND EVENING STARS.

☿ Mercury is a morning star rising about 2 hours before the Sun in the latter half of the month in the E.S.E. It will then be quite close to Venus, to the left and below.

♀ Venus has moved from Jupiter and Saturn (see last month) and rises later than those planets. It will be near Spica on the 7th, and passes from Virgo into Libra on the 18th. Mag., − 3·4.

♂, ♃, ♄ Mars, Jupiter, and Saturn are moving at different rates in Virgo. Mars overtakes Saturn on the 14th, Jupiter on the 26th, and towards the end of the month at 5 o'clock these three planets will be near together at an altitude of about 20° south of east. Since Neptune is now in the south in the early morning, there are six planets above the horizon in the hour before sunrise. Magnitudes: Mars, + 1·9; Jupiter, − 1·3; Saturn, + 1·2.

between their extremes. There was a similar congregation in November, 1901, and others even closer are on record, but they are rare. There is no record that Jupiter and Saturn have made such close conjunction that they have been superposed, which has happened in the case of other pairs of planets.

As to position in their orbits the six planets that are above the horizon at dawn are all on the same side of the Sun. On Nov. 23, five will be included within an angle of 32° with the Sun as apex; whilst Neptune will be only 50° distant. In December, 1919, some popular interest, amounting almost to alarm, which was quite without reason, was caused by a similar configuration.

Apparent Right Ascension and Declination of Polaris.

Mean Longitude of Moon's Ascending Node, December 1, 195°17′ 3″.

ECLIPSES, CONJUNCTIONS, AND OTHER CELESTIAL PHENOMENA.

December 1. Day breaks at 5*h.* 41*m.* Civil twilight ends 16*h.* 45*m.* Night begins 17*h.* 57*m.*

The length of the Day is 8*h.* 8*m.* From Dec. 18 to 25 the length of the Day is about 7*h.* 46*m.*

Dec. 5. Mean time taken by Sun's semidiameter in crossing the meridian, 1*m.* 10·38*s.*

Dec. 6. Uranus in conjunction with ☽, 22*h.* 15*m.* ♅ 4° 16′ S.

Dec. 22. Sun enters the sign Capricornus, 9*h.* 8*m.* (Winter Solstice.)

Dec. 22. Saturn in conjunction with ☽, 11*h.* 10*m.* ♄ 3° 8′ N.

Dec. 23. Jupiter in conjunction with ☽, 2*h.* 0*m.* ♃ 1° 12′ N.

Dec. 23. Mars in conjunction with ☽, 22*h.* 59*m.* ♂ 0° 8′ N.

Dec. 25. Mean time taken by Sun's semi-diameter in crossing the meridian, 1*m.* 11·0*s.*

Dec. 27, 16*h.* Mercury in superior conjunction.

Dec. 28. Venus in conjunction with ☽, 7*h.* 58*m.* ♀ 4° 38′ S.

Dec. 29. Mercury in conjunction with ☽, 8*h.* 35*m.* ☿ 6° 45′ S.

Uranus sets Dec. 1, 23*h.* 3*m.*; Dec. 31, 21*h.* 9*m.*

Neptune rises Dec. 1, 21*h.* 3*m.*; Dec. 31, 19*h.* 3*m.*

In this month the Mornings decrease 23*m.*, the decrease continuing throughout the month. The Afternoons decrease 4*m.* up to the 13th, and then increase 9*m.*

Constellations near the S. meridian at 22*h.*: Andromeda, Triangulum, Aries, Cetus, Perseus, Taurus, Eridanus, Auriga, Orion.

The Shortest Day.—For reasons similar to those given with reference to the Longest Day in the note on p. 46, the date of the shortest day, which is that on which the Winter Solstice falls, varies from year to year, and during the century. At the present time December 22 is always the shortest day, but as the solstice, on the whole, happens earlier as the years go on, in the latter half of this century the date will be Dec. 21 or 22, as it was before the year 1900. Since the year 2,000 will be a leap-year, the date at the beginning of next century will continue to be Dec. 21 or 22.

MORNING AND EVENING STARS.

☿ Mercury continues to be a morning star, rising S.E. by E. an hour before the Sun at the beginning of the month. Being at Superior conjunction on the 27th, it rises and sets nearly with the Sun at the end.

♀ Venus is still a morning star, but rises in the dawn. This planet will move from the constellation Libra into Scorpius during December and is near the star Antares on the 14th. Magnitude, −3·4.

☽, ♂, ♃, ♄ Mars has moved from, and is now seen below, Jupiter and Saturn, and the distance between these two has increased. The three planets still form a line approximately vertical, Jupiter being midway between the other two in the middle of the month at an altitude of 20° at 4 o'clock. Spica will be seen to the right of Mars. Magnitudes: Mars, +1·8 to +1·5; Jupiter, −1·4 to −1·6; Saturn, +1·1.

Though Dec. 22 is the shortest day from sunrise to sunset in this latitude, the Sun sets at its earliest by the Mean-time clock 9 or 10 days sooner. This is to be accounted for by the Equation of Time, which is subtractive from Apparent time at this period of the year, and is decreasing in amount at the rate of half a minute per day. Apparent noon, and therefore sunset, is later daily on this account by half a minute. The effect of the change of the Sun's declination which, up to Dec. 22, makes the time of sunset earlier, is less than half a minute per day after Dec. 13; and therefore from this date the time of sunset, on the whole, grows later.

Apparent Right Ascension and Declination of Polaris.

Jan. 3. Earth in Perihelion. Distance, 91,345,000 miles.

Jan. 18, 10*h.* Saturn at a Stationary Point.

Jan. 18. Saturn in conjunction with ☽, 18*h.* 9*m.* ♄ 2° 56′ N.

Jan. 19. Jupiter in conjunction with ☽, 11*h.* 32*m.* ♃ 0° 49′ N.

Jan. 27. Venus in conjunction with ☽, 20*h.* 15*m.* ♀ 5° 46′ S.

Jan. 29. Mercury in conjunction with ☽, 18*h.* 51*m.* ☿ 3° 25′ S.

Mercury may be visible as an evening star at the end of the month. Venus being at superior conjunction on February 19, rises and sets with the Sun. Mars, Jupiter and Saturn are to be seen in the morning sky in the constellation Virgo. Mars moves into Libra during the month.

RISING, SOUTHING, and SETTING of the PRINCIPAL PLANETS at intervals of Seven Days. (Noon = 12 h.)

Tidal Constants,

WITH THE RISE OF TIDE AT SPRINGS AND NEAPS.

THE TIME OF HIGH WATER *at the undermentioned Ports and Places may be approximately found by taking the Time of High Water at London Bridge, and adding to or subtracting therefrom the quantities annexed.*

NOTE.—The time thus found will be Greenwich Time for British, French and Belgian Ports, and Irish Ports, and Amsterdam time for Dutch Ports.

Example 1.—Required the time of high water at Aberdeen on *January 8th*:

Time of high water at London Bridge 1*h.* 24*m.* Morn.
Subtract tide interval 0 50

Time of high water at Aberdeen ..... 0 34 Morn.

Example 2.—Required the time of high water at Scarborough on *January 9th*:—

Time of high water at London Bridge 2*h.* 1*m.* Morn.
Add tide interval 2 15

Time of high water at Scarborough .. 4 16 Morn.

It may happen that the "tide interval" to be subtracted is greater than the quantity from which it has to be taken, in which case 12 hours must be added to the London Bridge time; the resulting difference will be the preceding day's afternoon tide where the London morning tide was used. Sometimes the sum "high water at London Bridge"+"tide interval" will exceed 12 hours; in this case, the excess will be the time of high water after the noon or midnight following, according as the London high water was either morning or afternoon.

Example 3.—Required the time of high water at Aberdeen, *January 14th aft.*:—

Time of high water at London Bridge
on *January 14th* ..... 17*h.* 7*m.* After.
Subtract tide interval 0 50

Time of high water at Aberdeen, *Jan. 14th* 16 17 After.

Tables for Finding the Times of Sunrise and Sunset.

THIS double entry table provides the means for finding, with sufficient accuracy for practical purposes, the times of sunrise and sunset at any place situated between latitude 60° N. and 60° S.

To use the table: In the horizontal line with the Sun's declination in the first column, and under the required latitude in the heading, there will be found the *local apparent time* of sunset. Subtracting this from 12*h.* will give the *local apparent time* of sunrise. To obtain from this the local mean time, the quantity in the second column on the second page of each month (which is known as the Equation of Time) appropriate to the day in question must be added to or subtracted from these apparent times of sunrise and sunset, as shown in the heading.

To find the corresponding Greenwich mean time, the difference of longitude of the place from Greenwich must be added if the place be West, subtracted if East.

The table is arranged for northern latitudes, but will serve equally well for places south of the Equator, if the declination North in the first column be considered South, and *vice versâ*.

If the times of sunrise or sunset are required for any declination or latitude falling between the arguments in the table, they may be found by simple proportion.

THE TIME OF SUNSET.

The times of sunrise and sunset given in this Almanack are the times when the centre of the Sun's disc is on the visible horizon at sea-level at Greenwich, computed on the assumption that the horizontal refraction is 34½′. It is doubtful whether there is a precise legal definition of sunrise and sunset. The above has generally been adopted as a correct statement, though in some Tables the instant when the upper limb, or edge, of the Sun is on the visible horizon is given as

LATITUDE.

the time when the Sun rises and sets. The legal question has been more concerned with the distinction between local sunset and Greenwich sunset, rather than with a precise definition. It has been held by a legal tribunal, as would be expected, that the word "sunset" in laws and regulations must be taken to mean the time when the sun sets at the place in question, whether it be stated in local or Greenwich time.

TO FIND THE GREENWICH TIME OF SUNRISE AT CERTAIN PLACES IN THE BRITISH ISLES IN EACH MONTH OF THE YEAR.

The Table gives the number of minutes to be added to or subtracted from the time of sunrise at Greenwich, to find the Greenwich time of sunrise at the place named in the first column, on the first day of each month. The corrections to be applied on other dates and for other places in the neighbourhood of these may be inferred approximately by interpolation.

The sign + means that the time required is later than that at Greenwich. The sign − that it is earlier.

Comparison of these Tables with a map will show that the places at which the Sun rises or sets at the *same* moment on any day lie in a straight line across the map, the lines for different moments being parallel; and that the lines change their inclination to the meridian throughout the year

Tables for Determining the Latitude

FROM OBSERVATIONS OF THE ALTITUDE OF THE POLE STAR OUT OF THE MERIDIAN.

TABLE I.

22	1 25	1 17	1 8	0 59	0 56	0 56	1 2	1 11	1 23	1 32	1 40	1 43	1 41
24	1 24	1 20	1 13	1 3	0 55	0 51	0 52	0 58	1 8	1 19	1 31	1 38	1 41

The corrections in Tables II. and III. are always to be added; 1′ is to be subtracted from the final result because the quantities in Table III. above have been increased by that amount in order that they may all be additive.

Solar and Sidereal Time.

TO CHANGE INTERVALS OF MEAN SOLAR TIME INTO THE EQUIVALENT INTERVALS OF SIDEREAL TIME AND *VICE VERSA*.

THE length of a Sidereal day is 23*h*. 56*m*. 4·09*s*. of Mean Time. One hour of Sidereal Time is, therefore, equivalent to 59*m*. 50·17*s*. of Mean Time, and one hour of mean solar time is equivalent to 1*h*. 0*m*. 9·86*s*. of Sidereal Time. This may be expressed otherwise by saying that the Mean Time clock loses or retards 9·83*s*. per hour on the sidereal clock, and that the sidereal clock gains or accelerates 9·86*s*. per hour on the Mean Time clock. These quantities—"acceleration" and "retardation"—are tabulated below for the argument (common to both) in the middle columns. If the argument be considered as Mean Time, its equivalent in Sidereal Time is obtained by adding the acceleration. On the other hand, if it is considered to be Sidereal Time, its equivalent in Mean Time is found by subtracting the retardation.

Acceleration.	Argument.	Retardation.	Acceleration.	Argument.	Retardation.	Acceleration.	Argument.	Retardation.	Argument.	Acceleration or Retardation.	Argument.	Acceleration or Retardation.

ECLIPSES IN 1921.

In the year 1921 there will be four Eclipses, two of the Sun and two of the Moon.

I. An Annular Eclipse of the Sun in the morning of April 8. An Annulus or ring of the Sun's bright disc will be seen round the eclipsing Moon from the northern part of Scotland, and from a small strip of the north-west coast of Norway, which includes the Lofoden Islands. The limiting line north of which an annular eclipse may be seen passes approximately from Arisaig in Invernessshire (8*h.* 53*m.*) on the west coast of Scotland to Dornoch Firth (8*h.* 55*m.*) on the east and thence to Norway, passing about 30 miles south of Tromsö. The central line of Eclipse from which the Annulus will be seen symmetrically placed round the lunar disc passes a few miles south of Tarbert in the Isle of Harris (8*h.* 54*m.*), and near Cape Wrath (8*h.* 57*m.*) in the extreme north-west of Scotland.

A Partial Eclipse will be seen from the remaining portion of the British Isles, from the whole of the Continent of Europe, from Northern Africa, and a large part of Northern Asia, India and part of China being excluded. From places in the British Isles the portion of the Sun's disc that will be eclipsed will be large, a small segment only of the lower edge being left unobscured. Details of the eclipse at various places are :—

	Eclipse Begins. H. M.	Greatest Phase. H. M.	Eclipse Ends. H. M.	Mag.
Edinburgh	7 42	8 53	10 9	0·95
Armagh	7 38	8 48	10 3	0·95
Dublin	7 36	8 46	10 2	0·94
Durham	7 41	8 52	10 9	0·93
Oxford	7 35	8 47	10 4	0·89
Cambridge	7 37	8 49	10 7	0·89
Greenwich	7 35	8 47	10 5	0·88

The last column shows the fraction of the Sun's diameter that will be eclipsed at Greatest Phase.

II. A Total Eclipse of the Moon in the morning of April 22. Invisible at Greenwich. The beginning will be visible generally from North America, South America and the Atlantic and Pacific Oceans. The ending visible generally from North and South America, Australia, the Pacific Ocean and the Eastern portion of Asia. The Moon will enter the Earth's shadow at 3 minutes after 6 o'clock, and leave it at 26 minutes after 9 o'clock. Total Eclipse begins at 7*h.* 24*m.* and ends at 8*h.* 5*m.* (Greenwich Time). Magnitude of the Eclipse 1·074.

III. A Total Eclipse of the Sun on October 1. Invisible at Greenwich. The path of Total Eclipse lies wholly in the Ocean South of South America, and crosses the meridian of Greenwich quite near to the South Pole. The only land from which totality may be seen is the South Shetland Islands and Graham Land. The Sun will be seen Partially Eclipse from South America as far North as latitude 10° S. The Greatest duration of Total Phase on the central line will be 112 seconds, at about half-an-hour after Greenwich *noon*.

IV. A Partial (nearly Total) Eclipse of the Moon on October 16. Visible at Greenwich. The beginning will be visible generally from Asia (except the eastern portion), Europe, Africa, the Eastern part of South America, the Indian Ocean and the Atlantic Ocean. The end will be visible from the same regions, excepting the eastern part of the Indian Ocean, with the greater part of North and South America added.

Moon enters Penumbra... Oct. 16*d.* 20*h.* 1*m.*
,, ,, Shadow ..... ,, ,, 21*h.* 14*m.*
Middle of Eclipse ..... ,, ,, 22*h.* 54*m.*
Moon leaves Shadow ..... Oct. 17*d.* 0*h.* 34*m.*
,, ,, Penumbra... ,, ,, 1*h.* 46*m.*

The point of the Moon's disc which is the first to enter the shadow is at 45° from the North Point towards the East. The point where it leaves the shadow is 77° from the North Point towards the West. At Greatest Eclipse the portion of the Moon not in the shadow will be at the lower edge of the disc, less than a tenth of the diameter in breadth, the magnitude of the Eclipse being 0·938.

ECLIPSES OF JUPITER'S SATELLITES.

This Table gives the Greenwich Time of the Eclipses of the Satellites of Jupiter that will be visible from Greenwich in the year 1921 and in January 1922. The letters D. and R. in the second column signify respectively Disappearance and Reappearance.

From March 4 to July the disappearances and reappearances take place on the Eastern side of the planet. In January and February, and from September to January (1922), the disappearances and reappearances take place on the Western side of the planet. Satellites I. and II. after disappearing into the shadow of the planet reappear at its Eastern limb.

The above list contains the names of all the stars of the 6th magnitude and brighter that will be seen occulted from Greenwich during the year, with the times of disappearance and reappearance. The times of the occultations if seen from other places will be different—earlier in general, if the place is West, later if it is East. Disappearances usually happen on the East or left-hand side of the Moon, reappearances on the West; but the exact position is shown by the figures in the fourth and sixth columns, which give the angle from the North Point or point of the Moon's disc nearest the North Pole of the heavens (as in last year's issue of this Almanack), counting towards the East from 0° to 360°.

Illuminated Portions of the Discs of Mercury and Venus, 1921.

This table give the angular dimensions of the outer limit of Saturn's outer Ring as seen from the Earth. The signs show the changes in the side of the Ring presented to the Earth. Before April 10 the South (−) side is presented to the Sun; the North (+) after that date (*see* pages 39 and 89).

Fixed Stars.

The position of a star is defined by its Right Ascension and Declination which have for basis the plane of the Earth's Equator and a certain direction in that plane. Because of certain movements of the Earth these co-ordinates are continually changing. These changes are called Precession and Nutation. A star *actually* changes its position by Proper Motion (see p. 84), and *apparently* by Aberration, which has a periodic effect of one year. The position of a star as seen in the sky is affected by these causes and is called the Apparent place. The Mean place on January 1, 1921, given in the Table on the opposite page is the Apparent place referred to the Equator of date with these effects eliminated. For purposes of navigation and surveying it is the Apparent place that should be used, and on this page the Apparent places of some stars are given. The Apparent place of Polaris is given on p. 4 of each month.

(*See* page 82.) Polaris = α Ursæ Minoris ; Aldebaran = α Tauri ; Rigel = β Orionis ; Capella = α Aurigæ ; Betelgeuse = α Orionis ; Sirius = α Canis Majoris ; Castor = α Geminorum ; Procyon = α Canis Minoris ; Pollux = β Geminorum ; Regulus = α Leonis ; Spica = α Virginis ; Arcturus = α Bootis ; Antares = α Scorpii ; Vega = α Lyræ ; Fomalhaut = α Piscis Australis ; α Aquilæ = Altair ; α Pegasi = Markab ; Achernar = α Eridani ; Canopus = α Argûs.

The last columns show the intrinsic brightness compared with that of our Sun, which is taken as a star of apparent magnitude −26·1 on the Stellar scale. α Centauri.—The components of this binary are combined. There is a small star near which is probably a member of the same system. Recently a star of the 12th magnitude has been found with a large proper motion and a large parallax, which may be added to this list.

THE objects of the sky, Sun, Moon, Planets, Stars, appear to us to be fixed on the interior surface of a hemisphere of which the observer is the centre. Actually the different classes of objects are at very different distances. The stars are the farthest away, and individual stars are at great and very various distances from us, and are themselves separated from one another by equally large distances. The nearest star to the Sun is nearly ten thousand times as far from it as is the planet Neptune. It is one of the aims of modern astronomy to investigate the method of distribution of these bodies in space, and their possible movements. There are about 10,000 stars visible to the naked eye in the whole celestial sphere, the number including the cases where two or more faint stars close together combine to form one which is so visible. The number naturally depends on the efficiency of the observing eye and the clearness of the atmosphere, and the estimate will be less generous if stars to magnitude 6·0 and no fainter are included, which is sometimes taken as the limit of naked-eye visibility. The whole number of stars down to this limit of magnitude is 4,300, of which more than 3,000 are visible during the year from latitude 60°. By the aid of the photographic plate objects are detected and recorded which no eye can see, even with the best optical aid. One hundred millions is an under-estimate of the number of stars already photographed, and it may be supposed that this number would be much increased with increased exposure. The Yerkes telescope, whose object glass has 40 inches diameter, will just show stars of the 17th magnitude. A star of magnitude 21 has been photographed.

THE MILKY WAY.

It is believed that the great mass of the stars that we are considering are arranged in space in a form which may be likened to a watch or lens. In other words, our stellar Universe is considerably flattened on both sides, and the median plane is marked out in the sky by the band of star cloud of irregular shape which is seen crossing the sky on a clear night, known as the Milky Way or Galaxy. Our Sun is not precisely at the centre of the lens, but is probably not far distant from that point. Any estimate of the size of this Universe of stars can at present be little more than conjecture, but 3,000 light years (*see* p. 85) may be taken as a minimum estimate of the length of the radius of the section in the median plane. This Universe is more densely populated in the region of its central plane, called the Galactic plane, than elsewhere. On either side of it the stars lie thick, but the number becomes progressively less as the distance from that plane increases, until at the poles they are relatively few. Around the circumference of the lens is a huge ring or girdle made up of stars, generally very faint, because of their distance, clusters of stars which appear like stellar clouds, and nebulæ. These agglomerations of celestial matter make up the appearance we recognise as the Milky Way. It is suggested that in the space which comprises the Universe of stars there is dark obscuring matter which is the immediate cause of some of the dark patches in the Milky Way. As seen in the sky the Galaxy always passes through the same constellations, sharing with them the diurnal motion, but its direction bears no special relation to the direction of the Ecliptic, Equator, or horizon. Such a relation is not to be expected, for these three planes pertain only to our Sun and Earth, which are minor bodies of the Cosmos of which the Galaxy is a main outstanding feature.

STAR SPECTRA.

Most of the bright stars and many of the fainter have been examined with a spectroscope, and have been divided into classes according to their type of spectrum as indicated by the lines which cross them. The spectral types are marked by the letters O, B, A, F, G, K, M, and the order as written is supposed to indicate in some way the order of evolution or growth of stars, but there are divergent theories on this point. The stars of the first two classes, O and B, have spectra characteristic of helium and hydrogen, and have some affinity to planetary nebulæ. Stars whose spectra range between A and F—and it is to be remarked that there is no rigorous line of division between the classes—are white or blue stars, and in their spectra the absorption lines of hydrogen are conspicuous. In the next groups—F to G, and G to K—lines characteristic of metals appear, fine but numerous, and the stars of this class are yellow. The spectrum of our Sun falls within the group F to G. The spectra of the remaining classes, K to M, indicate a lowering of temperature, and the stars are red. Antares, Betelgeuse, and α Herculis are notable stars of this type.

STELLAR MOTION.

Many, if not all, of the so-called Fixed Stars are gradually changing their positions relative to one another, the movement of each star being called its Proper Motion. Consideration of these proper motions has led to the conclusion that they are in part due to an actual movement in space of the star itself, but in part to the movement of our own Sun, which causes an apparent motion of the star in the opposite direction, this latter being called the star's parallactic motion. In this way, it has been found fairly conclusively that the Sun, and with it the Earth and planets, is moving through space with a speed of 19·5 kilometres per second towards a point on the celestial sphere not far from the bright star Vega, speaking roughly, but the precise position of this point is not yet known. This movement of 19·5 kilometres per second being established, if by any means it is possible to find out the mean parallactic movement of a group of stars, the mean parallax, or distance of this group from us, follows from a simple computation. In other words, the space through which our Sun travels, which is about twice the diameter of the Earth's orbit in a year, is taken as the base line with which to measure the distances of the stars.

DISTANCE OF THE STARS.

The direct method of determination of a star's distance or stellar parallax, consists in measuring the minute difference of direction of the star, as seen from opposite points of the Earth's orbit, and though the process is difficult and slow, several useful lists of newly found parallaxes have lately been published. It is possible, however, to make inferences from other information. The Proper Motions of Stars of spectral type F and G are found to be much larger on the whole than those of other types, and it is therefore to be supposed that these classes are nearest to us. It has

The times given are *approximately* those of the middle of minimum phase

already been mentioned that our Sun is of this spectral type. A method has been evolved for finding the absolute intrinsic brightness of a star by examination of its spectrum. Comparison of this brightness with the star's apparent magnitude gives a measure of its distance, which is the most recent way of finding stellar parallax. If a sphere be assumed round the Sun as centre with a radius of a hundred billion miles, there are within it, so far as is known, about 20 stars. The nearest of these is the bright star α Centauri and its companion. The immense distances of the stars are measured in terms of the space that light moves through in one year as unit, which in miles is 6 followed by 12 zeros, or the parsec is taken as unit, which is 3¼ times the light year and is represented roughly by 2 followed by 13 zeros. A short list of some of the nearest stars is given on p. 83. It will be seen that this comprises some of the faint stars which are therefore of small intrinsic luminosity (Dwarf). On the other hand in the list of bright stars on the same page there are some which are very distant, and these must therefore be intrinsically of great magnitude (Giant).

VARIABLE STARS.

Although the stars generally shine with unchanging brightness, there are some among them which are exceptions to this rule, and of these Algol, the star β of the constellation Perseus, is the best known. In general this star is of nearly the second magnitude, but at stated intervals of something less than three days it fades away to nearly the fourth magnitude, remains so for about 20 minutes, and then regains its light. The whole eclipse occupies about 9 hours. The approximate times when this star will be at minimum in the months when it is suitably placed for observation are given in the table above. The position of Algol is given by R.A. 3*h.* 3*m.*, Declination 40° 39′ N.

There are variable stars of types other than the Algol. The Cepheid variables have an average period of about 7 days, and the rise from minimum to maximum takes only about one-third of the whole period, so that the decrease of light is more gradual than the increase. Stars of the β Lyræ type pass from minimum to minimum in about 6½ days, but are not of the same brightness at all minima, the alternate being equal. There are variable stars of long period (about 330 days) of which Mira Ceti is the most famous and others more capricious in their variation whose peculiarities can scarcely be summarized.

NEW OR TEMPORARY STARS.

The phenomena known as "Novae" or "New" Stars can scarcely be classed as variable stars, for the rise to maximum, so far as is known, occurs only once in their history. Generally the Nova appears in the place of a star of faint magnitude, already catalogued or photographed, which blazes out into conflagration in the space of a few days or hours. The great brilliancy is almost as short-lived as the increase in light, and then follows a fall, more or less steady, and in a few months the object emits, perhaps, 1 per cent. of its light, whilst in a decade it has fallen to its original condition and luminosity. As these changes go on the spectrum undergoes equally remarkable variations. The few observations that have been made during the increase of brightness show a spectrum of the ordinary type crossed by dark lines which are much displaced from their normal position. Just as the maximum light is reached the spectrum is full of bright bands flanked by dark lines on the side of the shorter wave length towards the violet. The lines of hydrogen are most conspicuous, but helium is present, and other bands can be identified with enhanced lines or lines which are produced in the laboratory when metallic vapour is very strongly excited to luminosity by a powerful electric spark. Later on as the light begins to fall the characteristic nebular lines in the green and violet make their appearance and become the most conspicuous feature of the spectrum while the other lines fade away. At a still later stage the spectrum resembles that of the nucleus of a planetary nebula or of one of the Wolf-Rayet stars which are found here and there in the Milky Way. A Nova found in Aquila early in June, 1918, went through the course above detailed and according to observations made at Stonyhurst arrived at the planetary nebula stage early in August of that year. A new star was discovered in Cygnus on Aug. 20, 1920, which was then of magnitude 3½, but increased to magnitude brighter than 2·0 four nights later. It then declined quickly, and on August 30 was only of magnitude 4. A more gradual loss of light then occurred and the star disappeared as a naked eye object on September 22, having remained visible for 34 nights. A list of recent bright Novae which have appeared and been detected is given, and Novae which have not been of naked eye visibility are not infrequently found on photographs. There are records of appearance of these temporary stars as early as 134 B.C. There were none between 1600 and 1848, but, since the latter date there

have been 12 visible to the naked eye as under. With the exception of the second, all have been in the region of the Milky Way.

STAR CLUSTERS AND NEBULÆ.

Among the other apparently solitary stars we may notice groups of stars gathered close together, sometimes easily separable into individual stars, others that can only be separated in the most powerful telescopes, and some that appear as unresolvable patches of light; the latter are called nebulæ, and appear to consist, in some instances, of an incandescent gas according to the evidence of the spectroscope. A short list of the more interesting of these various objects is given herewith.

Some Astronomical Constants.

	° ′ ″
Solar Parallax	8·80
Constant of Precession	50·26
Constant of Nutation	9·21
Constant of Aberration	20·47

THE AURORA BOREALIS.

This phenomenon is more terrestrial than celestial, and this paragraph, with that which follows, would have been more suitably placed in a later section. It sometimes happens that an unusual luminosity is seen in the northern sky in the form of streamers, arches, and condensations, and it is desirable to record the varying phases and times of these features. It chiefly manifests itself at pretty regular intervals of about eleven years, and seems to be associated with magnetic disturbances and Sun-spots, which have similar periods. The aurora is sometimes regarded as showing the outer limit of our atmosphere, and its height has been determined. The general result is that the elevation of an aurora is between 50 and 200 miles. The great majority are about 60 miles high, and there are few above 100 miles. There is some suggestion that, with magnetic storms, the period of their appearance follows that of the Sun's synodic rotation (27¼ days). On March 22, 1920, there was a very extended group of spots at the middle of the Sun's disc, a magnetic storm, and splendid display of aurora during the night. Such coincidences are not unusual (*see* p. 87).

THE ZODIACAL LIGHT.

This is an appearance which is little understood, and therefore deserves the attention of observers. It shows as a band of faint light which stretches up slantingly from the Sun before sunrise in the autumn months and in the evenings in March. It may be the manifestation of a widely scattered appendage of the Sun or a vast concourse of slightly reflective meteoric systems. It has been asserted that it is a mere atmospheric effect, but this is not consistent with some of the chief features of its appearance. That it has a celestial origin seems certain, but its true nature is not clearly distinguishable on the evidence before us.

THE Sun is one of the millions of stars that make up the Universe, and, so far as human knowledge goes, is not unlike many of the stars we see in magnitude and constitution. It is surrounded by a family of smaller bodies of which our Earth is one, and the Solar system, which is only a minute detail in the structure of the Universe, is the observing station from which we look out in all directions across the great distances which separate us from the other members of the stellar system.

The Solar or Planetary system consists of the Sun, with eight major planets and a thousand minor planets, or asteroids, circulating round him at varying distances in oval-shaped orbits. Six of the major planets have smaller bodies circulating around them, so that each forms a separate system, but all the bodies receive their light and heat from the Sun.

The periodic comets which return to perihelion at regular intervals, since they move in elongated elliptical orbits of which the Sun is at one focus, are also members of the Solar system, but shine partly by their own light.

The plane of the Ecliptic in which the Earth moves round the Sun (*see* p. 101) is used as a fundamental plane of reference. The other planets move, at varying distances from the Sun, in planes inclined but little to the plane of the Ecliptic, and describe orbits in periodic times which are connected with the distances by a certain relation known as Kepler's 3rd law. The squares of the periodic times vary as the cubes of the semi-major axes. Following are given brief notes on each of the bodies which make up the Solar system, with details of their sizes, distances from their primary, and periodic times in tabular form. The time of rotation about the axis, or the length of the day of the planet, is added where this is known.

THE SUN.

The surface of the Sun presents a mottled appearance, and on it black spots appear sporadically. The nature of these is not known with certainty, but it was formerly supposed that they are at a lower level than the surrounding surface, the photosphere, though some modern views assert that spots are due to a central uprush. They are evidently signs of some solar activity which influences the magnetism of the Earth, for the coincidence in time between certain variations of terrestrial magnetism and of magnetic storms on the earth with the appearance of sun-spots is too marked to be fortuitous. It is suggested that the connection is made by stream-like emanations of corpuscles from the Sun which envelop the earth. The spots vary in size and number, and their total area reaches a maximum about every eleven years. They seldom appear more than 30° of latitude from the solar equator, north or south, and the spotted regions converge towards that equator as the time of minimum approaches. A record is kept of the appearance and positions of the spots on the solar disc, and from these positions the latitude and longitude of the spots on the Sun's surface (Heliographic) can be computed. Elements necessary for this computation are given on page 2 of each month. The Sun rotates on its axis in about 25 days 8 hours, which is shown by the apparent movement of the spots. They cross the visible disc from the eastern to the western edge in 13 or 14 days, the average period of the Sun's rotation with *respect to the Earth* being 27¼ days, because of the orbital movement of the Earth in the interval. Like Jupiter, the Sun appears not to rotate as a whole, the period of rotation being different in different latitudes. The Equator makes a complete rotation in less than 25 days, whereas the period for latitude 35° is nearly 27 days. The number and size of the spots in 1920 showed a marked decline, though there were occasional notable outbursts.

DATES OF SUN-SPOT MAXIMA AND MINIMA.

Maxima.		Minima.	
1805·2	1870·6	1810·6	1867·2
1816·4	1883·9	1823·3	1878·9

1837·2	1906·1	1843·5	1901·7
1848·1	1917·7	1856·0	1913·1
1860·1			

When the intense light of the Sun is shut off by the interposition of the dark body of the Moon in a total solar eclipse, certain red prominences are seen projecting from the Sun's edge, which consist of masses of glowing hydrogen gas arising from the chromosphere, sometimes of a remarkable shape and extending to enormous heights, occasionally being actually detached from the body of the Sun. In the lower strata of the Sun's envelope are found the vapours of many metals, known by their characteristic lines shown in the spectroscope. Another appendage to the Sun outside the chromosphere is called the Corona, and can only be seen during total eclipses of the Sun. The lower portion consists of a pale green light containing hydrogen, the upper is a beautiful mass of silvery white light, in form of feather-like plumes, with dark spaces between, which have been traced from the Sun's edge to a distance as great as twice the Sun's diameter. The corona does not retain a constant form, but appears to vary in shape and extension according as the eclipse occurs at the period of maximum or minimum of Sun-spots. Solar eclipses are only total at a certain region on the globe, this being the place or places where the shadow of the Moon falls, and an eclipse is partial at localities off the line of totality, because the change in the observer's position puts the Moon out of the direct line joining her to the Sun. Total eclipses of the Sun are rare in this country. There will be an eclipse in June 1927 which will be momentarily total from a track running across North Wales and North-West Yorkshire. Sometimes on the occasion of a central eclipse the Moon is at such a distance from the Earth that the Sun's disc is not quite covered, and a ring of light is seen round the eclipsing Moon. An annular eclipse of this kind will be seen from a region in the North of Ireland and Scotland in April of this year (*see* pp. 38 and 80) and preparations are being made for observation of a Total Solar Eclipse from the Indian Ocean in September 1922.

MERCURY.

Mercury is the nearest planet to the Sun, and the smallest in the system. Because it moves in an orbit between the Sun and the Earth this planet can never be seen far from the former body, and is sometimes to the West, sometimes to the East of the Sun. In the former case Mercury appears as a morning star and in the latter as an evening star. The extremes of these apparent excursions are technically known as Elongations, and the times and distances

measured by the angle included between the lines which join the Earth to the Sun and the planet respectively, are given in the third page of each month. The great ellipticity of the orbit of Mercury causes the amount of these Elongations to vary considerably, and they may be as small as 16° or as large as 29°. The period of revolution round the Sun—in other words, Mercury's year—comprises 88 solar days, and he turns on his axis either in the same time, and therefore always presents the same face to the Sun, like the Moon with respect to the Earth, or in about 25 hours. Mercury shows phases to the Earth—like the Moon in her first quarter if the elongation be in the East, and like her last quarter if in the West.

VENUS.

Venus, which is nearly twice as far from the Sun as Mercury, is almost exactly the same size as the Earth. Her apparent movement with respect to the Sun is similar to that of Mercury, except that, being farther from the Sun, and nearer to the Earth than her smaller neighbours, the angles of Elongation exceed those of Mercury, and extend to 47°. The disc of Venus is not telescopically interesting, for owing to her dense cloud-laden atmosphere very few markings are visible, and this renders a determination of her axial rotation uncertain. By some astronomers her day is believed to be very nearly equal to that of the Earth, whilst others have concluded that it is equal to the year of Venus, or, in other words, that the planet always presents the same face to the Sun. Venus has epochs of great brilliancy when she appears as a beautiful crescent like the Moon when about 5 days from New. Such epochs will occur in the current year in March and May (*see* p. 42). The brightness is not the same at all the maxima, but this varies periodically, and the evening maximum in March of this year is a specially bright one.

MARS.

Mars, the first planet whose orbit is exterior to that of the Earth, is a little larger than Mercury and considerably smaller than Venus and the Earth. Details of his distance and period will be found in the table. Mars is in opposition at intervals of about two years, because it moves at a rate not greatly different from that of the Earth, and it will not be at opposition, and therefore not very conspicuous in the year 1921, at least until the end of the year. Mars, like Mercury and Venus, exhibits phases, but in a much less degree than those planets. His disc departs from exact circular form, or is gibbous only to the extent of one-eighth of its diameter. The other superior planets are too far away to show any very appreciable phase, though traces of it are sometimes to be detected in Jupiter.

Unlike Mercury and Venus, Mars exhibits many well-defined markings, which enable his rotation period to be well ascertained; there are, besides, white spots at the poles of rotation. These are supposed to consist of snow, and when it is summer to the Martians in the northern hemisphere, the white spot about that pole dwindles considerably in extent, if it does not disappear entirely, which it does rarely. The remainder of the disc is divided into greyish and ruddy areas, which have been called seas and lands. The Maria are not now generally considered to be oceans, but are usually regarded as marshes or areas covered with some sort of vegetation. These areas are seen to change their colour and intensity with the Martian seasons very much as our vegetation would appear to do if viewed from a celestial neighbour. Certain fine, dark, straight markings seen across the ruddy areas have been named "canals," perhaps a little unfortunately, as it has been taken to imply that they are of manual construction, but for this there is no sufficient evidence or proof.

MINOR PLANETS.

Between the orbits of Mars and Jupiter a large number of small planets have been discovered, and every year a considerable number are added to the list. At present the total number known is about a thousand, and there may still be thousands awaiting detection. It has been estimated in a recent Memoir that there are perhaps 80,000 minor planets brighter than the 20th magnitude, but that comparatively few brighter than the 12th magnitude remain undiscovered. The four largest, found in the early years of the 19th century, are—Ceres, 485 miles; Pallas, 304 miles; Juno, 118 miles; and Vesta, 243 miles. Vesta is the brightest though not the largest. In recent years the discoveries have been of much smaller objects, and it is probable that some of them are not more than from 10 to 20 miles in diameter, and are perhaps nothing more than great masses of rock flying round the Sun.

The periodic times of their revolutions vary considerably, amounting on an average to about 1,600 days, or $4\frac{1}{2}$ years. Some of the orbits are very oval and the inclination of their planes to the Ecliptic varies considerably: in the case of Pallas it amounts to 35°, that of Juno being only 13°. One of these small bodies, named Eros, at some oppositions approaches nearer to the Earth than Mars does at any time, and thus affords a good opportunity for determination of the solar parallax. Oppositions happen at intervals of about $2\frac{1}{3}$ years, the circumstances being very different at the different occasions. There will be one towards the end of year 1921, another and a more favourable one in 1924, and there will be a very close approach at the opposition in 1931.

JUPITER.

The next planet in order from the Sun, Jupiter, is the largest planet in the system, and has a diameter eleven times that of the Earth, but the density is only $\frac{1}{4}$th of the latter. On viewing Jupiter through a telescope it will be seen that the disc is not circular, but its form, an oblate spheroid, is believed to be due to the rapid axial rotation, which causes a flattening at the poles and bulging outwards at the equator. The same effect is produced on all the planets in more or less degree. Jupiter has four principal satellites about the same size as our moon, which were the first celestial objects discovered with the telescope, Galileo having observed them in the year 1610. The planes of their orbits are but slightly inclined to that of Jupiter about the Sun, and in consequence eclipses of the three inner moons, which shine by the light of the Sun, occur every Jovian lunation, their distance from Jupiter not being large enough to permit them to escape the shadow, as is the case with Satellite IV. in some circumstances. A period of about three years begins at the end of this year when the fourth satellite will not be eclipsed.

The Great Red Spot on Jupiter.

This may be considered the most remarkable and the best observed planetary feature of modern times. There is record of an observation of a spot by Hook in 1664 which may have been an early appearance of this, but the first modern observation was by the Rev. W. R. Dawes when he figured it in the form of an ellipse resting on the south equatorial belt of Jupiter on Nov. 27, 1857. It came again into prominence in 1878 and the following years. A curious bay or hollow on this belt has been visible since 1831; and if we accept this as identical with the one now visible (which includes the red spot), then the rotation of this object during the 84 years from 1831 to 1914 was $9^h.\ 55^m.\ 36^s.98$. from 74,170 rotations.

In the early months of 1919 the great red spot and its immediate surroundings underwent some surprising changes. The bay or hollow in the S. side of the southern equatorial belt disappeared, and the red spot seemed almost obliterated. The south tropical disturbance, visible since 1901, consisting of an extensive dusky marking reaching halfway round the circumference of Jupiter, and situated in the usually bright zone between the southern side of the south equatorial belt and the south temperate belt, apparently disappeared. The apparition of 1919-20 was again remarkable. The features mentioned above, the Bay, the Red Spot Hollow, and the S. Tropical disturbance, had all reappeared, and the Red Spot, though without its colour, was well defined and of abnormal length.

At the opening of the year 1921 the position of the latter object will be approximately 85°, or 140 minutes, preceding the zero meridian (System II.) of Jupiter, and if the previous motion is continued, the values above given will increase at the rate of about 4°, or 6·7 minutes per month. There is much to repay a careful study of the portion of Jupiter's surface referred to through adequately powerful telescopes. The transits of the zero meridian (II.) of the planet on various dates in 1921 will be as under:—

1921.		H.	M.	1921.		H.	M.
Jan.	18	21	35	June	20	22	53
,,	20	23	13	July	19	22	1
Feb.	16	20	26	Oct.	24	7	48
,,	18	22	4	Nov.	20	5	14
Mar.	17	19	18	,,	22	6	52
,,	21	22	34	Dec.	19	4	15
Apr.	19	21	30	,,	21	5	54
May	20	22	9	,,	23	7	32

The times for other dates may be found by adding periods of $9^h.\ 55^m.\ 40^s$.

Note.—Two systems are in use for defining the positions of markings on Jupiter. In System I., which pertains to the rapidly moving Equatorial Zone of the planet, the period of rotation is taken as $9^h.\ 50^m.\ 30^s$. System II. applies to the Temperate Zones, and in this the time of rotation is $9^h.\ 55^m.\ 40^s.63^s$

Saturn.

The sixth major planet in order from the Sun is unique in appearance because of its encircling ring-system, which renders it magnificent as a spectacle and an interesting object for telescopic observation. The system consists of three bright rings and an inner dusky ring through which the body of the planet can be seen. The rings appear to be flat annular discs of extreme thinness, inclined at an angle of 28° to the plane of the Ecliptic, and it is shown that neither of them can be a coherent mass or in one piece, either solid or liquid, as in that case it would be difficult to account for their stability. They probably consist of an immense number of minute bodies revolving like satellites round the body of the planet. Of the three bright rings the middle is the brightest. Twice during Saturn's period of revolution of 29½ years, the plane of the Ring will pass through the Sun's centre, at intervals of about 13½ and 16 years. Such an occurrence will happen this year—the last was on July 27, 1907—and will give rise to the circumstances mentioned in the note on page 38. Belts like those on Jupiter, but of not so pronounced a character, are seen on Saturn. His figure shows a bulging at his equator, the ratio of the polar to the equatorial diameter being as 14 to 15.

Saturn has ten satellites, situated outside the rings, some of which are visible in telescopes of low power. Titan, the largest, is about one and a half times the size of our moon, whilst Iapetus is about the same size as our satellite.

Uranus.

Discovered by William Herschel at Bath in 1781, this planet is only just visible to the naked eye. In a telescope Uranus may be distinguished from the stars around by his disc, which is obvious though less than 4″ in diameter, and by the quality of his light, which is less piercing than that of the stars. Very little is known about his surface markings, but a rotation period of 10 hours 49 minutes has been inferred from the observed variability of his light, which has been supposed to be due to some specially reflective spot coming into the Sun's rays. A determination of the rotation period by the spectroscopic method agrees with this. Uranus will be favourably situated for observation in the autumn months in 1921.

Neptune.

This planet, placed on the confines of the Solar system, is a small telescopic object of about the 8th magnitude. He will occupy nearly a stationary position in Cancer, and may be observed with best effect in the early months of this year.

The Moon.

Neither Mercury nor Venus, so far as is known, has a satellite; the one satellite of the Earth is the Moon, which is quite familiar to us. The mean distance of the Moon from the Earth is about 239,000 miles—near enough for us to get a more complete knowledge of its surface conditions than we can of any other member of the Solar system. When viewed through a telescope, charts of very great accuracy can be made of her surface, as she has no appreciable atmosphere to obscure the more delicate markings. Only one side of the Moon is seen, and from this fact we infer that she must turn on her axis in the same time that she moves round the Earth. As there is no sign of water or vapour on the disc, and consequently no atmosphere, the surface must be exposed to the most violent changes of temperature: in the lunar day of half a month it must be heated to a very high temperature, and in the other half subjected to cold equal to that of interstellar space. Her diameter is rather more than 2,160 miles, and her rate of motion through the firmament 13° 10′ 35″ per day and 32′ 56″ per hour. Thus she travels over a space slightly exceeding her own diameter in one hour. The actual time she takes to move around the Earth is $27d.\ 7h.\ 43m.\ 11^s.5^s$., but

the time from one New Moon to another is 29*d.* 12*h.* 44*m.* 3*s.* When seen through a telescope the surface of the Moon presents many objects of great beauty and interest. A small instrument will show the chief "seas," plains, mountain ranges, ring-plains, and crater-pits. The phases of the Moon occur because only a half of the lunar sphere is bright at any one time, and we on the Earth may, or may not, be in a position to see the whole of that bright hemisphere.

When the Earth passes between the Sun and Moon, the Earth's shadow sweeps across the Moon and causes a lunar eclipse, which may be either total or partial as in the case of solar eclipses, but there is this difference—that a lunar eclipse is visible to all observers where the Moon is above the horizon at the time. The obscuration of the Moon's disc is hardly ever complete, but because the Sun's light is scattered by the clouds in the Earth's atmosphere, the Moon appears usually as a dark copper-coloured disc. From what has been said above, it will be understood that solar eclipses can take place only at New Moon, and lunar eclipses only at Full Moon.

In a note on page 58 it is stated that the small daily retardation of moonrise, which is the essential characteristic of the Harvest Moon, occurs each month, though not always at the Full Moon. The retardation depends essentially on the inclination of the lunar orbit to the horizon at time of moonrise, therefore in some degree it is a question of latitude, and in Northern latitudes, when the longitude of the Ascending node of the Moon's orbit is 0°, this minimum daily retardation is small. In the year 1913 the longitude of the node in September was 354°, and the difference between time of rising on consecutive days at Full Moon was 8 or 9 minutes only. The present position of the node does not give such a small retardation, but the minimum has almost its greatest value. Though there are differences in the details of the phenomenon, the expression "Harvest Moon" is held to apply in all cases to the Full Moon which happens nearest the Autumn Equinox, whilst that which follows is called the Hunter's Moon.

A FEW OF THE CHIEF LUNAR FORMATIONS.

Wedge-shaped Valley of the Alps.—Near the central line of disc, towards the north, a cleft 83 miles long and 3½-5¾ miles broad.

Apennines.—An extensive mountain range somewhat similar to terrestrial features. Visible to naked eye when projecting into the dark part of the disc. Length, 460 miles; highest summit (Huygens) reaches 18,000 feet.

Aristarchus.—A lunar crater in N.E. quadrant. The brightest object on the Moon. This crater is visible as a luminous spot when all the surrounding region is involved in shadow.

Mare Crisium.—A dark grey oval plain visible to naked eye near W.N.W. limb of Moon. Extends 280 miles N. to S. and 354 miles E. to W. Well seen five days after new or a few days after full.

Mare Serenitatis.—Lies S. of the Moon's centre, and extends over 428 miles. A nearly circular dark plain. Contains a crater, Linne, formerly suspected of change. This *mare* is visible to naked eye.

Clavius.—One of the finest craters on the Moon, and about 142 miles in diameter. Situated on S. limb.

Tycho.—Towards S. limb. Has been called "the metropolitan crater of the Moon." A fine crater 54 miles in diameter and 16,600 feet deep. Central hill nearly a mile high. Tycho is the centre of a remarkable system of bright rays radiating from it, and they are very conspicuous at the time of full moon. In its region (S. limb) the Moon's surface is so studded with craters that it resembles an immense honeycomb.

COMETS.

In addition to the planets, there are other interesting objects belonging to the Solar system, called comets. Some of these revolve in elliptical orbits, and the periodic times of those whose return has been observed range from 3½ to nearly 80 years, whilst a few other computed orbits show periods as large as a million years. Other comets move in parabolic courses (and apparently do not repeat their visits to the Sun.

Comets revolving around the Sun in comparatively limited times are not very numerous, but our knowledge of them is constantly becoming more comprehensive and accurate. These small returning comets revolve in periods from 3½ to 9 years, and deserve special notice, as their orbits are well known and predictions of their reappearances can be accurately made in many cases.

Their paths extend outwards to the position where Jupiter performs his revolution, and from this circumstance they are termed Jovian comets.

The following are the approximate months when some of the members of this family may be expected to return to perihelion in 1921 and 1922:—

Expected Return.	Period in Years.	Name of Comet and Year of Discovery.
1921. July	3·299...	Encke 1786
July	5·893...	Pons-Winnecke 1819
December	7·588...	Metcalf 1906
1922. January ...	6·366...	Taylor 1915
April	5·398...	Barnard 1884
September	5·499...	Neujmin 1916
September	6·453...	Perrine 1896
October ...	6·480...	Daniel 1909
November	6·420...	Spitaler 1890
November	5·456...	Brorsen 1846

The comets of this class move in elliptic orbits not much inclined to the Ecliptic. Without exception they travel in *direct* courses, and in these respects present an analogy to the planets, but of those that move in very long ellipses, or parabolas, about two-thirds have a retrograde (westerly) motion.

There are other families of comets, none so large as the Jovian, named respectively from the planets Saturn, Uranus and Neptune, for reasons similar to that given above. Halley's comet belongs to the Neptunian family.

The most probable date for the return of Di Vico's comet of 1846 is November 1921, but as the period is uncertain by 2 or 3 years a later return is possible.

In 1920 Tempel-Swift's comet, first discovered in 1869, was reobserved.

In the life of a comet the tail sometimes appears to undergo very rapid and curious changes. From examination of the spectrum of the head, comets appear to consist of carbon in various forms, and cyanogen has also been detected. Secondly, there are bright metallic lines due to sodium, magnesium and iron which appear only when the comet is near perihelion, and in some cases have become very strong upon close approach to the Sun. The spectrum of the tail shows certain characteristic bands that are due to carbon monoxide of very low density. Generally a continuous spectrum is shown as a background to the bright lines, from which we infer that a part of the comet's light is due to reflected sunlight. Comets' tails are generally directed away from the Sun, as if acted upon by some repulsive action—perhaps light.

METEORS.

Another class of objects which belong to the Solar system are the meteoric streams, giving rise to occasional showers of meteors, falling stars, or fire-balls, which are all the same class of object, the distinction being only one of size. They are visible in varying number on every night of the year, and are sometimes so abundant as to form striking phenomena. The year

No.	Epoch 1921.	Radiant Point. R.A. Dec.	Name of Shower.

19	October 17—24...	92+15	Orionids.
20	November 5.....	61+35	ε Perseids.
21	Nov. 13—15	150+23	Leonids.
22	Nov. 14—25	64+22	ε Taurids.
23	Nov. 17—23	25+43	Andromedids.
24	Dec. 1—12	119+31	β Geminids.
25	Dec. 1—14.....	108+33	Geminids.
26	Dec. 18—21	161+58	αUrsaeMajorids.
27	Dec. 18—28	194+68	κ Draconids.

1916 was notable because of a remarkably abundant and previously unknown stream on June 28, which had a distinct connexion with Pons-Winnecke's periodical comet, the orbits being nearly the same. This comet will return again to perihelion in the summer of 1921 and may produce an abundant and brilliant meteoric shower at the end of June. Meteorites are composed of terrestrial elements, iron, chromium, magnesium, and nickel being in large proportion.

Greenwich Mean Time.

Time, in the abstract, is measured by the distance described by a moving body, or machine, when the velocity of the same is sustained with perfect uniformity. Our rotating Earth is the moving body used to measure time, and a solar day is the duration of a complete rotation of the Earth round its axis with respect to the Sun. The speed of the Earth's rotation is itself uniform, but as it is here estimated with reference to the Sun, the length of the solar day is affected, first by the movement of the Earth in its orbit round the Sun, which is not always at the same rate because of the ellipticity of the orbit, and also by the circumstance that the axis about which the Earth rotates is not perpendicular to the plane of that orbit. Clocks are adjusted to an average or mean solar day which is of uniform length and is divided into 24 equal hours. This is the basis of Mean Solar Time.

A unit and method of measurement having been established, it is necessary to choose a zero. The zero adopted is the instant when a fictitious body known as the Mean Sun, which is sometimes before, sometimes behind the real Sun in its apparent diurnal journey round the Earth, is on some chosen meridian. The meridian chosen being that which passes through some particular place, the time is called the Local Mean Time of that place. Usually some standard meridian, such as that of Greenwich, is chosen, and the time of that meridian is used throughout a whole country, and hence the expression Greenwich Mean Solar Time, or, more usually, Greenwich Mean Time arises (see Zone Standard Time, p. 93).

Apparent Solar Time.

The time shown by a sundial is affected by the two causes mentioned, which make the length of a solar day not uniform. This is called Apparent Solar Time, and differs from Mean Solar Time by the Equation of Time which is given in the second column of page 2 for each month, and is to be used according to the precept in the heading.

The Astronomical Day.

For purposes of Astronomy the day begins at noon, and the hours following noon are numbered successively from 0 to 23. There is therefore no use of the letters A.M. and P.M. in astronomical tables, but January 1*d.* 22*h.* is the equivalent of January 2*d.* 10*h.* a.m. in ordinary parlance, and January 2*d.* 9*h.* in astronomy is recognised as being January 2*d.* 9*h.* p.m. of ordinary life. In its early years the calculations of the Nautical Almanac were made for Apparent Noon, or the moment when the True Sun is on the meridian of Greenwich, and this is still done in some special cases, but at present the abbreviation G.M.T. always indicates the time of a day which begins at Mean Noon.

The use of a day of 24 hours beginning at noon for astronomical purposes is of great antiquity, but proposals have frequently been made for the unification of the astronomical and civil days. In 1919 the Lords of the Admiralty, after consultation with the Royal Astronomical Society, decided to take this step, and directed that a day beginning at midnight should be substituted for the Astronomical Day in the *Nautical Almanac*, beginning with the edition for 1925. A similar alteration had already been decided on by the French authorities, to take effect from January 1, 1920, and the system has been brought into use in some French official publications. A similar day has been adopted for the first time in this issue of Whitaker's Almanack (*see* p. 26).

Sidereal Time.

A sidereal day is the duration of a complete rotation of the Earth round its axis with reference to the stars. This is of uniform length, and is divided, like the mean solar day, into 24 equal hours, which are shorter than a solar hour by about 9·83 seconds of mean time. As the sidereal day is about 4 minutes shorter than the mean solar day (*see* page 79), it begins earlier day by day by about that amount. The instant of the beginning of the sidereal day in G.M.T. is given on p. 2 of each month. In actual observatory practice time is measured, and the standard clock is regulated, by this rotation of the Earth with respect to the stars, and Mean Solar Time is derived from Sidereal Time by computation (*see* below). The error and rate of the sidereal clock are found by observing the instant it shows when certain stars, known as Clock Stars, cross the meridian or are due south, and comparison of this with the known time of transit (star's R.A.) will give the error of the sidereal clock. Comparison of the mean solar clock with the sidereal clock will show the error of the former. The same result might be arrived at directly by observing the instant by the Mean Time clock when the stars cross the meridian.

"Summer" Time.

In the spring of 1916 the Government adopted as an advantage during the war the principle of a scheme proposed by Mr. William Willett about the year 1907 and an Act was passed, known as the Summer Time Act (1916), the first clause of which runs: "During the prescribed period in each year in which this Act is in force the time for general purposes in Great Britain shall be one hour in advance of Greenwich Mean Time." A committee appointed to consider the working of the Act in 1916 reported in its favour, and Summer Time has been used in the following periods:—

1916.	May 21*d.* 2*h.* to Oct.	1*d.* 2*h.*
1917.	April 8*d.* 2*h.* to Sept.	17*d.* 2*h.*
1918.	Mar. 24*d.* 2*h.* to Sept.	30*d.* 2*h.*
1919.	Mar. 30*d.* 2*h.* to Sept.	29*d.* 2*h.*
1920.	Mar. 28*d* 2*h.* to Oct.	25*d.* 2*h.*

The hour being Greenwich Mean in each case. (In 1920 the ending of the period was postponed for four weeks for special reasons.)

The largest telescope in the world is the Hooker reflector with objective mirror 100 inches in diameter, which has lately been brought into use at the Mount Wilson Observatory, California.

In the year 1880 it was enacted by statute that the word "time," when it occurred in any legal document relating to Great Britain, was to be interpreted, unless otherwise specifically stated, as the Mean Time of the Greenwich meridian. There are other examples of the adoption by nations of the time of their own capital as the Standard Time of the country, but since the year 1883 the system of Standard Time by Zones has been gradually accepted, and now nearly all the countries of the world use as Standard the Time of some meridian which differs from that of Greenwich by a multiple of 15°, and therefore differs from Greenwich Mean Solar Time by an integral number of hours, either fast or slow. In a few cases differences including a half hour have been adopted.

The countries in which Standard Time has been adopted according to this scheme are given in the accompanying table. In the large territories of the United States and Canada it has been found expedient to adopt five different standard times, the territories being divided into five by meridians, 7½° on either side of the five central meridians. This arrangement is not strictly adhered to, because towns and cities near the dividing lines adopt which of the two times is the more suitable to railway or local requirements. The same plan is followed in Brazil, which is divided into three zones, and in these the time, 3 hours, 4 hours, or 5 hours slow on Greenwich, is adopted as standard respectively.

* It is proposed that the time of New Zealand shall be altered to 12 hours fast on Greenwich.

The time 2 hours fast on Greenwich is called East-European, that 1 hour fast is called Mid-European. The time appropriate to Eastern Canada, 4 hours slow on Greenwich, has been called alternatively Maritime, Inter-Colonial, and Atlantic Time. The standard times in use in the other four zones of the North American continent are called respectively Eastern, Central, Mountain, and Pacific Time.

It will be inferred from the above table that when it is noon at Greenwich on any day of the week, it will be midnight of that day in the Fiji Islands but half-past twelve in the morning of that same day in Samoa. In other words, at half an hour after midnight of Wednesday in Samoa, it is midnight of Thursday in Fiji, though these two places are separated by a comparatively short distance. In a vessel which is travelling westward this fact necessitates the omission of a day from the week, and in the case supposed, Thursday would be omitted from the log and the record would pass directly from Wednesday to Friday.

ZONE TIME AT SEA.

A scheme analogous to the Zone-time system was arranged and adopted by the Admiralty for the use of ships of H.M. Navy in 1919. The clocks used for ordinary life on board a vessel now show the time of the zone in which she then is, an adjustment being made when the ship enters each zone. A zone extending from 7½° longitude east of Greenwich to 7½° long. W. is the zero-zone, and zones each 15° of longitude wide westward of this are numbered + 1, + 2, + 3, . . . up to + 12 for that part of zone 12 lying east of the date line (180th meridian approximately). Similarly zones eastward are numbered − 1, − 2, − 3, up to − 12 for that part of the zone lying west of the date line. This "zone description" is given in any record of time by a clock, and from this the Greenwich Time of the event recorded may be inferred by addition or subtraction as shown by the sign.

SCIENTIFIC CHRONOLOGY is not yet a hundred years old, and in so far as it deals with the age of the world in which we live, it may be said to have its origin in the researches of geologists and ethnologists in the nineteenth century. These researches led to the discovery of extinct mammals buried under a surface which was calculated by geologists to have required many thousands of years in formation. The geological measure of time is the period occupied in the stratification of rocks, with allowances for intervals between the periods. By this measure the conjectural age of the World varies from 40 to 100 million years.

Geological Chronology.—The periods of stratification of the Earth's crust are classified by geologists as shown in the following list, each period having sub-divisions :—

I. EOZOIC.
II. PALÆOZOIC or PRIMARY.
  i. *Cambrian.*
  ii. *Silurian.*
  iii. *Devonian* or *Old Red Sandstone.*
  iv. *Carboniferous.*
  v. *Permian.*
III. MEZOZOIC or SECONDARY.
  i. *Triassic.*
  ii. *Jurassic.*
  iii. *Lower Cretaceous.*
  iv. *Upper Cretaceous.*
IV. CAINOZOIC or TERTIARY.
  i. *Eocene.*
  ii. *Oligocene.*
  iii. *Miocene.*
  iv. *Pliocene.*
V. QUATERNARY or POST-TERTIARY.
  i. *Pleistocene* or *Glacial.*
  ii. *Recent* or *Post-Glacial.*

No dates are assigned to these periods, as they are too indefinite and remote for comprehension. Traces of human life are found in V. i. and ii., which correspond with the Eolithic, Palæolithic, Neolithic, Bronze, and Iron Ages of our next paragraph.

Ethnological Periods.—The terms employed by ethnologists cover periods which reach to the more recent geological divisions of time and extend to the present day. They are periods, not of time, but of culture, and are of local application only. The terms in use are :—

1. Eolithic, or Dawn of the Stone Age.
2. Palæolithic, or Older Stone Age.
3. Neolithic, or Later Stone Age.
4. Bronze Age.
5. Early Iron Age.

Of these periods the last three can be dated for Europe as follows :—

Neolithic ends about 2000 B.C.
Bronze Age ends about 1000 to 500 B.C.
Early Iron Age from about 500 B.C.

Various systems of Chronology are dealt with in alphabetical sequence in the following list —

Abyssinian. — The Ethiopians have a chronological system which starts from the first day of the reign of the Roman Emperor Diocletian and proceeds in cycles of 532 years, commencing at 1 again upon the completion of each cycle. Their first year began on 29th August, 284 A.D.

Armenian. — The Armenians marked their secession from the Greek Church by adopting it as their epoch. This corresponds to 9th July, 552 A.D.

Assyrian or Babylonian.—In the eighth century B.C. the Babylonians commenced a chronology with the era of the founder of their Empire. Their epoch corresponds to 20th February, 747 B.C.

Biblical.—The Christians of Western Europe made many calculations concerning the date of the Creation of the World, based upon the genealogical tables in the Old Testament. In the seventeenth century James Ussher, Archbishop of Armagh, adopted the system, and *Ussher's Notation* was thenceforward printed in marginal notes to the English Bible. Ussher's Notation placed the Creation of the World in 4004 B.C.

Christian.—The Christian year was first adopted in Italy in the sixth and was accepted by England in the eighth century. The years are distinguished by cardinal numbers before or after the Incarnation, the period being denoted by the letters B.C. (Before Christ) or, more rarely, A.C. (*Ante Christum*) and A.D. (*Annus Domini*). The correlative dates of the epoch are the 4th year of the 194th Olympiad, the 753rd year from the Foundation of Rome, and the 4714th year of the Julian Period. The Christian Era commenced originally on 25th March, but in England Christmas Day was adopted as the beginning of the year from the seventh to twelfth centuries, after which time the Annunciation (25th March) prevailed until January 1 was adopted at the reform of the calendar in 1752. The reform of 1752 (*see also* "Roman Chronology," p. 95) omitted 11 days from the year in order to connect the civil and astronomical years, and thenceforward the *New Style* was adopted, the previous period being known as the *Old Style*. Through the omission of the extra day in 1800 and 1900 (which were not leap years) the difference between the Old and New Styles is now 13 days. The Eastern Church employs the Old Style.

Hindu.—In addition to the Muhammadan reckoning there are four eras used in India. The principal astronomical system was the *Kaliyu-ga Era*, which appears to have been adopted in the fourth century A.D. It began on 18 February, 3102 B.C. The chronological system of Northern India, known as the *Vikrama Samvat Era*, prevalent in Western India, began on 23 February, 57 B.C. The year 1921 A.D. is, therefore, the year 1978 of the Vikrama Era. In Southern India, the *Saka Era*, with its epoch of 3 March, A.D. 78, was probably founded by Kanishka (whose sway was widely extended), and is in general use. The year 1921 A.D. is 1843 of the Saka Era. In the Hills, the *Saptarshi Era* dates from the moment when the Saptarshi, or saints, were translated and became the stars of the Great Bear in 3076 B.C.

There are many obsolete eras in the history of the Indian Peninsula. The principal religious systems of chronology were those of the Buddhists and the Jains. The *Buddhists* reckoned from the death of Buddha in 543 B.C. (the actual date being 487 B.C.); and the epoch of the *Jains* was the death of Vardhamana, the founder of their faith, in 527 B.C.

Japanese and Chinese.—Japan in 1872 and the Chinese Republic in 1912 adopted the calendar of Western Europe.

Jewish. — In the fifteenth century the Jews adopted as their epoch the Creation of the World, which was placed in a year called in the Christian chronology 3760 B.C. Thus the year 1921 A.D. is *Annus Mundi* 5682–3 in the Jewish Calendar. A calendar for 5681–5682 will be found opposite.

Julian Period.—"A period of 7980 Julian years, proposed by Joseph Scaliger in 1582 as a universal standard of comparison of chronology, consisting

of the product of the number of years in the solar and lunar cycles and the cycle of the indiction ($28 \times 19 \times 15$)."—*New English Dictionary.*

Macedonian.—The epoch was the occupation of Babylon by Seleucus Nicator in 311 B.C., and this system of chronology prevailed in all Greek countries until the Middle Ages, and was adopted by the Jews until the fifteenth century. It is extant among certain nomadic Arab tribes.

Muhammadan.—The Muhammadan Epoch is the Hejira, or Flight of Mahomet, from Mecca to Medina in 622 A.D. The first day of the first month of the Muhammadan Era corresponds to 16th July, 622 A.D. The year 1921 is therefore 1339–1340 of the Hejira, a calendar for which year will be found on p. 100.

Olympiads.—Greek chronology was reckoned in cycles of four years corresponding with the periodic Olympic Games held on the plain of Olympia, in Elis, once in four years; the intervening years being the first, second, &c., of the Olympiad, which received the name of the victor at the Games. The first recorded Olympiad is that of Choroebus, 776 B.C.

Persian.—The chronology of Persia, which is still followed by the Parsees of India, dates from the accession of Yazdegerd III. to the throne on 10th June, 632 A.D. The year 1921 is, therefore, 1290 of the Parsees. The New Year begins on 21st March.

Roman.—Roman historians adopted as an epoch the Foundation of Rome, which they signified by the abbreviation A.U.C., *Ab* (anno) *Urbis Conditæ* (From the year of the founded city). This epoch is believed to fall in the year 753 B.C. The Calendar as we know it was a Roman institution; it was revised and reformed in 46 B.C. by Julius Cæsar, and remained unchanged in Western Europe until the year 1752 A.D. The Julian year contained 365¼ days, so that of every four years three were *Common Years* of 365 days and the fourth a *Leap Year* of 366 days. But this system made the civil year longer than the astronomical year, the difference being 3 days in 400 years, so that in the year 1752 A.D. there was an error of 11 days. Under the reformed scheme 3 leap years are omitted in each 400 years, and the years 1800 and 1900 each consisted of 365 days only. The year 2000 will be a leap year, the next subsequent end-century leap year being 2400.

CHRONOLOGICAL TERMS EXPLAINED.

Golden Number, so called from its importance in calculating the date of Easter, is the number of any year in a lunar cycle of nineteen years. It contains (approximately) 235 lunations, in which period the Moon returns to the same apparent position with regard to the Sun, so that new and full Moons occur at the same dates in the corresponding year of each cycle.

Easter Day is the first Sunday after the *Paschal Full Moon* (i.e., the full moon which happens upon, or next after, March 21; if that full moon occurs on a Sunday, Easter Day is the Sunday after).

Epact.—The age of the Moon at the commencement of the year, thus indicating the difference between the solar and lunar cycles.

Solar Cycle.—A period of twenty-eight years, in any corresponding year of which the days of the week recur on the same days of the month.

Roman Indiction.—A period of fifteen years, instituted by the Emperor Constantine in A.D. 313 for fiscal purposes.

The Dominical Letter is one of the first seven letters of the alphabet, A–G, which are used in succession to denote the Sundays (Lord's Day) in a particular year. If the first day of the year is a Sunday the letter is A; if the second, B; the third, C; and so on. Leap year requires two letters, the first for Jan. 1–Feb. 29, the second from March 1–Dec. 31.

and in alignment with 51 we find "**F**," which is the Dominical Letter for 1751, Old Style, and the Calendar for that year is Table **F**. (2) Find the Calendar for 1914:—Under 19, New Style, and in line with 14 we find "**D**." Therefore Table **D** is the Calendar required. (3) Find the Calendar for 1920:—This is a Leap Year, and has two Dominical Letters. Under 19, New Style, and in line with 20 we find "**DC**." Use Table **D** from Jan. 1 to Feb. 29, and Table **C** from March 1 to Dec. 31.

NOTE.—Old Style changed to New Style Sept. 14, 1752. For 1752 use Table **E** from Jan. 1 to Feb. 29, Table **D** from March 1 to Sept. 2 (11 days omitted), and Table **A** from Sept. 14 to Dec. 31. This Calendar, arranged by Mr. John C. Robertson, of Kirkcaldy, Scotland, is *copyright*.

Right Ascension, Declination.—The heavenly bodies appear to be affixed to the inner surface of a sphere of which the observer is the centre, and this celestial sphere is supposed to be marked with meridians and parallel circles just as is the terrestrial globe. The central of these circles is the extension of the Earth's Equator. On the celestial sphere Right Ascension is the counterpart of longitude on the Earth. Declination is the counterpart of terrestrial latitude.

The Ecliptic.—The extension of the plane of the Ecliptic (*see* p. 99) marks a circle round the celestial sphere called the Ecliptic. The position of the Ecliptic in the sky may be traced approximately by the positions of the moon and planets which always lie near it. The Sun is always in the Ecliptic.

The First Point of Aries.—The Ecliptic and Equator intersect in two points, the Sun being at one of these at the Spring Equinox. This point is called the First Point of Aries, and this is taken as the zero point from which Right Ascension is measured.

A similar system of circles parallel to the Ecliptic, with meridians at right-angles to them, is imagined, and the position of a heavenly body with reference to these is called its celestial latitude and longitude. Celestial longitude is also measured from the First Point of Aries, and does not differ greatly in amount from Right Ascension.

The R.A. and Dec. of a Star, except for changes mentioned on p. 83, are constant. The R.A. and Dec. of a Planet change because of the movement of the Earth and Planet round the Sun. The Right Ascension of the Sun continually increases because of the Earth's movement.

Opposition.—Since the Earth and planets move round the Sun at different rates, the Earth will at certain times pass between the Sun and an exterior planet, and the latter is then said to be in Opposition. The longitude of the planet measured from the Earth differs then from that of the Sun by 180°, and the planet is in the South at midnight.

Conjunction.—When the Earth and an Exterior Planet are in line with the Sun, the latter being between the two other bodies, the Planet is in Conjunction, and the Sun and the Planet have the same longitude. For Mercury and Venus, this configuration is called Superior Conjuction. When either of these planets is in line with the Sun and Earth and between these two bodies, it is said to be in Inferior Conjunction. A planet in either kind of Conjunction has the same longitude as the Sun, and therefore approximately the same Right Ascension.

In the course of its movement round the Earth, the Moon in every month is brought in line with each of the planets in turn; or it sometimes happens that two of the planets are brought by their orbital motion into line with the Earth (or nearly so). In such cases the two objects are seen near together in the sky, and are then said to be in Conjunction. Technically, the word is here used in a somewhat different sense from that of the preceding paragraph, the definition being that the two objects are in conjunction when they have the same Right Ascension.

Elongation of Mercury and Venus (*see* p. 85).

Stationary Points.—A line being supposed joining the Earth and a planet, at certain epochs on either side of Opposition, or of Inferior Conjunction in the case of Mercury and Venus, this line remains parallel to itself for some days, and the planet does not change its position among the stars.

Heliocentric Position.—For some purposes it is convenient to consider the position of a celestial body supposed to be seen from the centre of the Sun. In this convention the position is given in latitude and longitude, but the longitude is not the same in amount as that referred to in the preceding paragraphs.

Occultations (*see* p. 50).

MUHAMMADAN CALENDAR. (1339th Year of Hejira, A.D. 1920–1921.)

Year of Hejira 1339.	A.D. 1920.	Year of Hejira 1339.	A.D. 1921.	Year of Hejira 1339.	A.D. 1921.

				Jomada I	December 31

ROMAN CALENDAR.

In the ancient Roman (Julian) Calendar the days of the month were not counted onward from the beginning, as with us, but three fixed points were taken, and any particular day was said to be so many days *before* the next coming fixed day. These three points were (1) the Kalends, by which name the first of each month was known; (2) the Nones, which fell on the seventh day of the month in March, May, July, and October, and on the fifth day in each of the other months; and the Ides, which always fell eight days after the Nones.

The first day of a month being called its "Kalends," the last day of the preceding month is called *the day before the Kalends* (pridie Kalendas). Thus December 31 would have been written "pridie Kal. Jan." The day before that, December 30, is the third day of the Kalends, both the beginning and ending days of the interval being taken in the reckoning, and so on back to the Ides, and from thence again to the Nones.

THE COPTIC CALENDAR.

Year 1637.	A.D. 1921.	Year 1637.	A.D. 1921.
Tubah	Jan. 9	Masrī	August 7
Amshīr	Feb. 8	Intercalary	Sept. 6–10
Barmahāt	March 10	Year 1638.	
Barmūdah	April 9	Tūt	Sept. 11
Bashuns	May 9	Bābah	Oct. 11
Būnah	June 8	Hātur	Nov. 10
Abīb	July 8	Kīhak	Dec. 10

In the Coptic Calendar, used by part of the population of Egypt and Ethiopia, the year is composed of 12 months of 30 days each, followed by 6 or 5 Intercalary days according as the year is or is not a Leap-year. The Era of this Calendar is that of Diocletian, A.D. 284.

THE shape of our Earth is that of an oblate spheroid, or a solid of revolution whose meridian sections are ellipses not differing much from circles, whilst the sections at right angles to these are circles. The length of the Polar axis, according to a recently accepted determination (Hayford) is 7,900·0 miles and the diameter of the Equatorial circle 7,926·7 miles. The suggestion has been made that the Equator is not an exact circle, but the supposed deviation from circularity was small, and the fact has not been proved. The mean density of the Earth is 5·5 times that of water. The Earth moves round the Sun in a plane which passes through the Sun's centre, or, to write with more precision, the centre of gravity of the Sun and Moon moves in this plane, and the Earth revolves round this centre not remaining precisely in the plane. The plane is called the plane of the Ecliptic. The Earth's Equator is inclined to this plane at an angle of 23½°, and it is this tilt which causes the Seasons, for the inclination is always in the same direction, and is such that the Northern end of the axis about which the Earth rotates points towards the Sun in the Summer of the Northern hemisphere, and away from it in the Winter. The Sun and Earth are surrounded on all sides by the stars, and because the Earth moves round the Sun, the Sun appears to change its position with respect to the stars during the year, and different sets of stars are seen in the sky at midnight in Summer and Winter, the Sun being between the Earth and the Winter stars in summer and *vice-versa*. Because of the inclination of the Equator to the Ecliptic, the Sun is high in the sky in Summer and low in Winter. The dates when the Sun is at the exact mean or intermediate positions—*i.e.*, when it is at the points in the sky defined by the line of intersection of the planes of the Equator and Ecliptic—are called the Equinoxes, and on these dates day and night are of equal duration all over the globe. The average velocity of the Earth in its orbit is 18½ miles a second, and it moves more slowly in July than in January. It makes a complete rotation on its axis in about 23 hours 56 minutes of mean time. Because the Earth moves round the Sun in the same direction as it rotates on its axis, the length of a solar day is more than the length of a rotation by about four minutes (*see* p. 92). It has been shown almost conclusively in recent years that the axis of rotation is not a fixed line in the Earth, but that its extremity circles about the pole of figure at a distance of a few feet.

THE TIDES.

The Tides of the Ocean are rightly attributed to the attractive influence of the Moon on the Oceans, modified by a similar influence of the Sun but of less amount because of the much greater distance of the attracting body. If the Earth were a globe uniformly covered with water it might be possible to account for the observed phenomena and predict them by simple mathematical consideration of these attractive influences, but these are very greatly modified by the land formations of our globe, and the prediction of the tides for any port depends mainly on the results of observation. A series of observed times and heights of the tide having been compiled and analysed, the analysis will show that the complete tidal movement can be represented by the combination of a series of periodic terms, and when these terms are each carried forward to some future date their recombination gives the predicted tide. The mean level of the sea remains practically constant, but small changes have been detected which may be assigned to various causes. Taking the mean sea-level as datum, high water is at its highest (springs) at or near New and Full Moon, whilst low water falls an equal amount below at those times. At or near the time of the first and last quarters of the Moon (neaps) the high water rises only about half as much above the mean level as it does at springs, and the low water falls about half as little below it. These phenomena do not usually coincide exactly with the times of these phases of the Moon, but occur later, the interval being known as the *age* of the tide—thus, at London Bridge, the highest or spring tide occurs 2½ days after New or Full Moon, and the neap tide is similarly delayed. The difference of height of spring and neap tides is the most apparent of the periodic differences which make up the whole tidal variation. Besides this there are differences due to the varying distance of the Moon from the Earth, and when the Moon is at or near perigee at New or Full the tide is specially high. There is a slight difference in the heights of the spring tide at New and Full Moon, and also in the height of the neap tide at the respective quarters, but these and other small periodicities are not appreciably noticeable at some ports.

TERRESTRIAL MAGNETISM.

A phenomenon of the Earth, the origin of which is obscure, but on which some light has been thrown by recent investigations, is known as Earth magnetism. Its best known manifestation is its effect on the needle of a mariner's compass, which, except for the variations to be immediately described, points continually northward. The north point indicated by a compass needle, except in particular cases, is not the north point shown by astronomical observations; in other words, the needle does not point to the North Pole of the axis of rotation of the Earth, but makes an angle with the terrestrial meridian. This angle is called the Magnetic Variation, or, more generally, Magnetic Declination, and differs in different parts of the world and even over limited tracts of country. Along a line from the north of Norfolk through Greenwich to Chichester the declination is the same as at Greenwich. Along a parallel line through Dover the West declination is at present about a degree less; from Newcastle to Plymouth it is about 1½° greater; whilst at Dublin the declination West is 3° or 4° greater than at Greenwich. Observations of magnetic declination are made and charted to show the amount of this magnetic element over our globe, and from such charts it appears that there are two points or regions which may be considered as directive centres, and are known as the Magnetic Poles. At these places a freely suspended magnetised needle would stand vertically. They do not coincide with the terrestrial Poles, nor are they exactly antipodal. The position of the North Magnetic Pole is about latitude 73°, longitude 100° W.; the South is in latitude 72°, longitude 150° E., but these positions apparently undergo secular change. The magnetic declination at any place changes gradually year by year, and its amount observed in or near London at certain epochs is given in the table on p. 102. That the compass needle does not in general point true north and south,

but that it is inclined a certain amount east or west, and that the amount varies with the locality was recognised among western nations by the end of the 15th century, Columbus being credited with the discovery. That there is a secular change in the magnetic declination, or that the amount at any place changes slowly year by year, was discovered by Gellibrand in 1634.

Magnetic Declination at London.

Year.	°	′	
1580	11	15	East.
1665	1	30	West.
1765	20	0	West.
1800	24	6	West.

In 1819 the westerly declination at Greenwich was about 24° 25′, which was probably its maximum. Since then it has been moving slowly eastward. The following table of mean magnetic elements is derived from the observations made at Greenwich in the respective years, and applies to Greenwich only. The figures for 1920 are approximate.

Year.	Mean Magnetic Declination at Greenwich West.	Horizontal Magnetic Force in C. G. S. Units at Greenwich.	Mean Inclination or Dip of Needle at Greenwich.
	° ′		° ′
1900	16 29·0	·1846	67 8·5
1910	15 41·2	·1855	66 52·6
1915	14 56·5	·1851	66 51·8
1916	14 46·9	·1849	66 52·8
1917	14 37·0	·1848	66 53·7
1918	14 27·7	·1846	66 54·2
1919	14 18·2	·1845	66 53·6
1920	14 9·0	·1844	66 54

The dip is the angle that a delicately poised needle constrained to move in a vertical plane under the action of magnetism only will make with the horizontal plane.

The declination varies during the 24 hours, for the needle makes a small excursion in the morning from East to West, and returns, the range at Greenwich being about 12′ in summer and 7′ in winter. The needle occupies its mean position in the morning about 10*h*., and again about 18*h*., throughout the year. It reaches its most westerly position about 14*h*., and its most easterly position during the night or early morning according to season of the year. The inclination or dip also varies in a similar manner to the declination. Since these variations of the magnetic elements are mainly confined to the hours of daylight, are much greater in summer than in winter, and are evidently affected by changes in the solar activity—for the variation is larger at times of Sun-spot maximum than at minimum—it may be concluded that they are in some way dependent on solar radiation, and it is suggested that the ionisation of the upper atmosphere by the Sun, which causes it to be highly conducting, may produce the effect.

MAGNETIC STORMS.

Besides these diurnal movements and their periodic variations, the magnets recording the three elements sometimes make sudden and violent oscillations which may continue for several hours. Such an occurrence is known as a Magnetic Storm, and is accompanied by spontaneous electric earth-currents, which, if unusually violent, cause hindrance to the working of cable and telegraph systems. These storms begin suddenly, and practically simultaneously all over the Earth. The occurrence of a magnetic storm on March 22, 1920, which lasted for several days, at a time when a long train of spots was crossing the Sun's visible disc, helps to make plausible the hypothesis that these storms are caused by the direct action of streams of electrified particles driven into space by solar action (*see* p. 87). But the theory has not passed without criticism, and is not finally accepted. Dates of previous magnetic storms of some violence are: August 11, 1919; Sept. 25, 1909; Oct. 31, 1903; Nov. 17, 1882.

GRAVITY.

The law of attraction or universal gravitation affirms that two bodies exert on one another an attraction directly proportional to their masses and in inverse ratio to the square of the distance between them, and since this is so the terrestrial mass exerts an attraction upon all the bodies at its surface. The combination of this attraction with the (so-called) centrifugal force due to the rotation of the earth produces a resultant force which is known as gravity. The direction of this force is the vertical.

It is found by experiment that the force of gravity (generally indicated by the letter g) is different in different latitudes. At the Pole the force exceeds that at the Equator by rather more than a two-hundredth part, or, in other words, a person who weighs 200 lbs. at the Equator by a spring balance would weigh by the same balance 201 lbs. at the Pole.

The experiments consist in finding the time of oscillation of the same pendulum in different latitudes, the time being smaller as g is larger. A pendulum which makes a swing in exactly one second is longer at places where g is large.

The following table gives the relative values of the force of gravity and the length of the seconds pendulum at various places—g is the acceleration due to gravity in centimetre-seconds, l is given in centimetres.

	g.	*l.*
Equator	978·05	99·097
Latitude 45°	980·63	99·359
Greenwich	981·21	99·418
Edinburgh	981·60	99·457
Pole	983·23	99·622

EARTHQUAKES.

Earthquakes, or earth tremors, are believed to be due to some form of fracture caused by the breakage of the Earth's substance under a growing strain, when the strain has passed the breaking point. This gives rise to waves which are propagated through the solid substance to distant parts of the Earth, and vertically upwards to the surface, sometimes with disastrous effects. The point where the fracture occurs and the earthquake originates is called the seismic centre, or origin, or focus. That part of the Earth which is vertically above this centre is called the epicentre. The waves transmitted through the Earth may come to the surface hundreds, or even thousands, of miles from the epicentre, and the times of arrival are recorded. The first indications on the seismograph are made by longitudinal waves (P), which are followed after an interval by direct transverse waves (S) in approximately the same path. From the length of the interval between the appearance of the P and the S waves the distance of the earthquake is inferred.

THE *Superficial Area* of the Earth is estimated to be 196,550,000 square miles, of which 55,500,000 square miles are Land and 141,050,000 square miles Water. The *Diameter* of the Earth at the Equator is 7,926½ English miles, and at the Poles 7,900 English miles. The Equatorial *Circumference* is 24,872·4 English miles, divided into 360 Degrees of Longitude, each of 69·09 English (or 60 Geographical) miles; these Degrees are measured from the Meridian of Greenwich, and numbered East and West of that point to meet in the Antipodes at the 180th Degree. Distance North and South of the Equator is marked by Parallels of Latitude, which proceed from zero (at the Equator) to 90° at the Poles.

AREA AND POPULATION.

Continent.	Area in Square Miles.	Estimated Population.
Europe	3,750,000	400,000,000
Asia	17,000,000	910,000,000
Africa	11,500,000	180,000,000
North America...	8,000,000	120,000,000
South America ...	6,800,000	38,000,000
Oceania	3,450,000	8,000,000
Polar Regions ...	5,000,000	...
	55,500,000	1,646,000,000

The British Empire extends over the largest area (14,220,000 sq. miles); Russia is the second largest country (8,400,000 sq. miles); France is third, with 4,336,000 sq. miles; China extends over 4,300,000 sq. miles; the United States, with its Insular Jurisdiction, &c., covers 3,750,000 sq. miles, and Brazil 3,220,000 sq. miles.

THE RACES OF MANKIND.†

The Races of Mankind are divisible according to Stock or, less scientifically, according to Colour. The Dominant Colour is Yellow—the numerical order being (1) Yellow, (2) White, (3) Black, (4) Brown, (5) Red. The main Divisions of the Races are as follows:—

Division.	Area.	Estimated Number.
Mongolian ...	Asia	655,000,000
Caucasian ...	Europe & Orient	645,000,000
Negro.....	Africa	190,000,000
Semitic	North Africa ...	81,000,000
Malayan	Australasia	52,000,000
Red Indian ...	America	23,000,000
		1,646,000,000

* The Earth is a *Sphere*, with a Northern and Southern *Hemisphere*; the Ocean surface is called the *Hydrosphere*, and the gaseous envelope the *Atmosphere*. The science concerned with the study of the Earth's crust is *Geology*, with the measurement of its surface *Geodesy*; the study of its surface is *Geography*, and of its superficial features *Physiography*. The study of the hydrosphere is *Oceanography*, of the lakes *Limnology*, and of the mountains *Orography*. The study of the Races of Mankind is *Ethnology*, and of their location *Ethnography*. The study of extinct organic life is *Palæontology*, and of existing life *Biology*.

An airship with a constant speed of 100 miles an hour would take nearly 105 years to reach the Sun. The velocity of a given point of the Earth's surface at the Equator exceeds 1,000 miles an hour (24,872·4 miles in 24 hours); the Earth's velocity in its orbit round the Sun is about 66,000 miles an hour (580,000,000 miles in 365 days, 6 hours, 9 minutes).

† It has been estimated that the Earth can maintain a population of 6,000,000,000, a total which will be reached about A.D. 2100, at the present rate of increase.

THE LARGEST CITIES.

The following cities have a population exceeding half a million:—

London (Greater), England (1918) ...	7,432,929
New York (Greater), U.S.A. (1919) ...	6,141,445
Paris, France (1911)	2,888,000
Chicago, U.S.A. (1919)	2,700,000
Petrograd, Russia (1915)	2,318,000
Tokyo, Japan (1913)	2,225,000
Vienna, Austria (1914).....	2,150,000
Berlin, Prussia 1910)	2,071,000
Moscow, Russia (1913)	1,818,000
Philadelphia, U.S.A. (1919)	1,825,000
Buenos Aires, Argentina (1916)	1,597,000
Osaka, Japan (1916).....	1,460,000
Canton, China	1,250,000
Calcutta, India (1911)	1,222,000
Rio de Janeiro, Brazil (1910)	1,130,000
Glasgow, Scotland (1911)	1,008,000
Peking, China	1,000,000
Constantinople, Turkey	1,000,000
Cleveland, U.S.A. (1919)	1,000,000
Bombay, India (1911).....	980,000
Detroit, U.S.A. (1919)	950,000
Hamburg, Germany (1910)	931,000
Warsaw, Poland (1913)	909,000
Budapest, Hungary (1910)	880,000
Birmingham, England (1911)	840,000
St. Louis, U.S.A. (1919).....	810,000
Boston, U.S.A. (1919).....	807,000
Liverpool, England (1911).....	746,000
Manchester, England (1911)	716,000
Montreal, Canada (1914)	700,000
Baltimore, U.S.A. (1919)	700,000
Naples, Italy (1915)	698,000
Milan, Italy (1915)	663,000
Cairo, Egypt (1907)	654,000
Amsterdam, Netherlands (1918).....	644,000
Shanghai (China)	639,000
Sydney, New South Wales (1911).....	637,000
Bangkok, Siam (1909)	630,000
Copenhagen, Denmark (1916)	605,000
Pittsburgh, U.S.A. (1919).....	604,000
Los Angeles, U.S.A. (1919)	600,000
Madrid, Spain (1910).....	600,000
Munich, Bavaria (1910).....	596,000
Melbourne, Victoria (1911)	592,000
Rome, Italy (1915)	591,000
Leipsic, Saxony (1910)	590,090
Barcelona, Spain (1910).....	587,000
San Francisco, U.S.A. (1919)	580,000
Marseilles, France (1911)	551,000
Prague, Czechoslovakia	550,000
Dresden, Saxony (1910)	548,000
Lyons, France (1911)	524,000
Madras, India (1911)	520,000
Cologne, Prussia (1910).....	517,000
Breslau, Prussia (1910)	512,000
Milwaukee, U.S.A. (1919).....	505,000
Rotterdam, Netherlands (1918).....	501,281
Toronto, Canada (1919).....	500,000
Buffalo, U.S.A. (1919).....	500,000
Newark, U.S.A. (1919)	500,000

OCEAN AREAS AND DEPTHS.

The greatest known Ocean Depth (in the Pacific, off Mindanao, 32,089 feet) is not much greater than the greatest land height (in the Himalayas); but the mean depth of the Ocean floor exceeds 12,000 feet, while the mean height of the surface of the land area of the Earth above sea level is only 2,300 feet. The following table gives the areas of the principal oceans and seas, with the greatest known depth of each :—

Name.	Area of Basin (sq. miles).	Greatest Depth (feet).
Oceans.		
Pacific	63,986,000	Off Mindanao, 32,089
Atlantic	31,530,000	Porto Rico Trench, 31,366
Indian	28,350,000	Sunda Trench, 22,968
Arctic	5,541,600	North Polar, 13,200
Seas.		
Malay	3,137,000	Kei Trench, 21,342
Central American	1,770,170	Caribbean, 20,568
Mediterranean	1,145,000	*Pola* Deep, 12,276
Behring	878,000	Buldir Trough, 13,422
Okhotsk	582,000	Kurile Trough, 10,554
East China	480,000	*about* 10,500
Hudson Bay	472,000	*about* 1,500
Japan	405,000	*about* 10,200
Andaman	305,000	*about* 11,000
North Sea	221,000	Skaggerak, 1,998
Red Sea	178,000	20° N., 7,254
Baltic	158,000	*about* 12,000

THE HIGHEST MOUNTAINS.

* Special Trade includes Imports retained for Home Consumption and Exports of Domestic Produce or Manufacture, and excludes Imports that are re-exported.

† General Trade includes the total value of Imports and the total value of Exports, and the combined total under these two headings is given where the value of the Special Trade cannot be definitely ascertained.

§ Montenegro and Serbia are included in Yugo-Slavia.

‡ Particulars for *Soviet* Russia.

The World's Production of Wheat.

(In millions of quarters of 480 lb.)

	Season 1918. (Actual.)	Season 1919. (Estimated.)
U.S.A.	114	115
Russia (say)	50	(say) 40
India	47	35

* Lloyd's Register Book does not include vessels trading on the Caspian Sea nor *wooden* vessels trading on the Great Lakes of North America. † In the absence of satisfactory information, the records of numerous small sailing vessels (belonging chiefly to Greece, Turkey, and Southern Russia) are omitted from the Register Book.
‡ The figures for steamers include only vessels of under 1,600 tons gross which have not been captured, requisitioned by, or allocated to, other countries.
§ Including all ex-Austro-Hungarian vessels and German steamers of 1,600 tons gross and upwards, the allocation of which is not yet known.
** Japanese sailing vessels are not recorded in Lloyd's Register Book. ‖ The figures exclude vessels registered at Esthonian ports.

Yemen	Yahya Muhammad Hamid ed Din, *Imam*	...	...
Yugo-Slavia	Peter I., *King*	July 12, 1844	June 15, 1903

The League of Nations.

ONE of the results of the War of 1914–1918 was the formation of a League of Nations, with a Covenant, and a Charter of XXVI Articles. The principle underlying the formation of the League was adopted by the delegates to the Peace Congress at Versailles on Jan. 25, 1919, and its influence was shewn in the terms of the Treaties.

The High Contracting Parties agreed to the Covenant in order to promote International Co-operation and to achieve International Peace and Security, by the acceptance of obligations not to resort to War

"by the prescription of open, just and honourable relations between Nations;

by the firm establishment of the understandings of International Law as the actual rule of conduct among Governments;

and by the maintenance of justice and a scrupulous regard for all Treaty Obligations in the dealings of Organized Peoples with one another."

The territorial integrity and existing political independence of all members of the League is guaranteed by the League. In case of any dispute between members, likely to lead to a rupture, they will submit the matter to arbitration or enquiry, and agree not resort to war until three months after the award by the arbitrator or the report by the Council, such award to be made within a reasonable time, and such report to be made within six months of the submission of the matter in dispute. Any member resorting to war in disregard of these rules shall be deemed to have committed an act of war against all the remaining members of the League, who undertake to subject the aggressor to the severance of all intercourse and trade or financial relations, while the Council of the League shall recommend to the Governments concerned what effective force shall be contributed by each to protect the covenants of the League.

In the event of a dispute between a member of the League and a State which is not a member (or between States that are not members) invitation shall be made to the State or States that are not members to accept membership, with its privileges and obligations. If the invitation be refused, and the State that is not a member resort to war against a member of the League, such State shall be deemed to have made war on every member of the League and shall be so dealt with. If the invitation be refused by States that are not members, the Council shall take such steps as may be possible to avert hostilities and to settle the dispute.

Article XXIII provides for securing fair and humane conditions of labour for men, women and children in the countries of members, and in those in which members have commercial and industrial relations, and provides for the just treatment of natives; for the suppression of the "White Slave traffic;" for the supervision of the traffic in opium and dangerous drugs, and in arms and ammunition; for the freedom of communications and trade between members, and for the prevention and control of disease.

The formation of the League was very largely the work of Woodrow Wilson, President of the United States of America 1913–21, but his action in committing the United States to participation in the League was repudiated by the Foreign Relations Committee of the Senate of the U.S. and was not endorsed by the electors in the Presidential Election of 1920.

The Council of the League consists of representatives of the British Empire, France, Italy and Japan, together with representatives of four other members of the League selected by the Assembly of Representatives of the members of the League. Any member of the League not represented on the Council shall be invited to send a representative to sit as a member of the Council during the consideration of matters specially affecting the interests of that member of the League.

The original members of the League were the Signatories of the Treaty of Peace at Versailles on behalf of the Allies, June 28, 1919:—

Belgium	Haiti
Bolivia	Hejaz
Brazil	Honduras
British Empire	Italy
Canada	Japan
Australia	Liberia
South Africa	Nicaragua
New Zealand	Panama
India	Peru
China	Poland
Cuba	Portugal
Czecho Slovakia	Rumania
Ecuador	Siam
France	*United States
Greece	Uruguay
Guatemala	Yugo-Slavia

The following States were invited to enter:—

Argentina	Persia
Chile	Salvador
Colombia	†Spain
†Denmark	†Sweden
†Netherlands	†Switzerland
†Norway	Venezuela
Paraguay	

Any fully self-governing State, Dominion or Colony, not named as an Original Member, may become a member of the League if its admission is agreed to by two-thirds of the Assembly.

Any member of the League may, after two years' notice of its intention to do so, withdraw from the League, provided that all its international obligations, and all its obligations under the Covenant, shall have been fulfilled at the time of its withdrawal.

SEAT OF THE LEAGUE, Geneva, Switzerland.

OFFICERS OF THE LEAGUE.

President (1921), M. Paul Hymans.
Secretary-General, Hon. Sir Eric Drummond, K.C.M.G., C.B. (and allowance £500) ... £5,000

NOTES.—† Died in office. (*a*) Elected as Vice-President.

GEORGE III. was the eldest son of Frederick, Prince of Wales (eldest son of George II.), and of Princess Augusta (youngest daughter of Frederick, Duke of Saxe-Coburg-Gotha). His Majesty was *born* at Norfolk House, St. James's Square, June 4, 1738; *succeeded* to the Throne Oct. 25, 1760; *married* Princess Charlotte (daughter of Charles, Duke of Mecklenberg-Strelitz); and was *crowned* with her on Sept. 22, 1761. The government was carried on, from Feb. 5, 1811, until the death of King George III., by his eldest son George, under the title of *Prince Regent*. King George III. *died* at Windsor, Jan. 29, 1820, his issue being:—

1. GEORGE IV. George Augustus Frederick, *Prince of Wales*, born Aug. 12, 1762, married Princess Caroline of Brunswick, succeeded to the Throne, Jan. 29, 1820, and died without surviving issue June 26, 1830.

2. Frederick, *Duke of York and Albany*, born Aug. 16, 1763, married Princess Frederica of Prussia, was for many years Commander-in-Chief of the Army, and died without issue Jan. 5, 1827.

3. WILLIAM IV. William, *Duke of Clarence*, born Aug. 21, 1765; was Lord High Admiral of England; married July 11, 1818, Adelaide, daughter of George, Duke of Saxe-Meiningen, by whom he had two daughters, who predeceased him; succeeded to the Throne, June 26, 1830, and died June 20, 1837.

4. Charlotte, *Princess Royal*, born Sept. 29, 1766, married Frederick, King of Württemberg, and died without issue.

5. Edward, *Duke of Kent*, born Nov. 2, 1767, married Princess Victoria (daughter of Francis, Duke of Saxe-Coburg, and widow of Charles, Prince of Leiningen), died Jan. 23, 1820. Their Royal Highnesses had issue a daughter, Princess Victoria, born May 24, 1819, who succeeded to the Throne as QUEEN VICTORIA, June 20, 1837.

6. Augusta, born Nov. 8, 1768, died unmarried Sept. 22, 1840.

7. Elizabeth, born May 22, 1770, married Frederick, Landgrave of Hesse, and died without issue Jan. 10, 1840.

8. KING OF HANOVER. Ernest, *Duke of Cumberland*, born June 5, 1771, married Frederica (daughter of Frederick V., Grand Duke of Mecklenberg-Strelitz), succeeded as King of Hanover June 20, 1837 (on death of William IV., owing to the exclusion of Queen Victoria by the provisions of the Salic Law), died Nov. 28, 1851.

9. Augustus, *Duke of Sussex*, born Jan 27, 1773, died without succession April 24, 1843.

10. Adolphus, *Duke of Cambridge*, born Feb. 24, 1774, married Princess Augusta (daughter of Frederick, Landgrave of Hesse), died July 8, 1850.

11. Mary, born April 25, 1776, married William Frederick, *Duke of Gloucester*, died without issue April 30, 1857.

12. Sophia, born Nov. 3, 1777, died unmarried May 27, 1848.

13. Octavius, born Feb. 23, 1779, died May 2, 1783.

14. Alfred, born Sept. 22, 1780, died Aug. 26, 1782.

15. Amelia, born Aug. 7, 1783, died unmarried Nov. 2, 1810.

DESCENDANTS OF H.R.H. ADOLPHUS, DUKE OF CAMBRIDGE, born Feb 24, 1774, died July 8, 1850.

1. H.R.H. Prince George, *Duke of Cambridge*, born March 26, 1819, Field-Marshal, Commander-in-Chief of the British Army, 1856–1895, died without succession March 17, 1904.

2. H.R.H. Princess Augusta, born July 19, 1822, married the Grand Duke of Mecklenberg-Strelitz.

3. H.R.H. Princess Marie Adelaide, born Nov. 27, 1833, married H.H. Francis, Duke of Teck, died Oct. 27, 1897, her issue being:—

(1) H.S.H. Princess Victoria Mary Augusta Louisa Olga Pauline Claudine Agnes (QUEEN MARY), born May 26, 1867, married July 6, 1893, H.R.H. Prince George of Wales, *Duke of York*, who succeeded to the Throne May 6, 1910, as KING GEORGE V. (*see* "House of Windsor," p. 119), crowned with His Majesty at Westminster Abbey, June 22, 1911.

(2) Adolphus Charles Alexander Ladislaus, *Marquess of Cambridge*, G.C.B., G.C.V.O., C.M.G., born Aug. 13, 1868, married Lady Margaret Grosvenor, daughter of the Duke of Westminster, their issue being (*a*) George Francis Hugh Cambridge, *Earl of Eltham*, born 1895; (*b*) Lady Victoria Constance Mary Cambridge, born 1897; (*c*) Lady Helena Frances Augusta Cambridge, born 1899; (*d*) Lord Frederick Charles Edward Cambridge, born 1907.

(3) H.S.H. Prince Francis, born Jan. 7, 1870, died Oct. 22, 1910.

(4) Alexander Augustus Frederick George, *Earl of Athlone*, G.C.B., G.C.V.O., C.M.G., D.S.O., born April 14, 1874, married H.R.H. Princess Alice of Albany (*see* "Queen Victoria's Family," p. 118).

CHILDREN OF H.M. KING CHRISTIAN IX. OF DENMARK, born April 8, 1818; died Jan. 29, 1906.

1. H.M. KING FREDERICK VIII. OF DENMARK, born June 3, 1843, married H.R.H. Princess Louise of Sweden and Norway, died May 14, 1912.

2. H.R.H. PRINCESS ALEXANDRA OF DENMARK (QUEEN ALEXANDRA), born Dec. 1, 1844, married March 10, 1863, H.R.H. the Prince of Wales (afterwards King Edward VII.), crowned with King Edward VII. at Westminster Abbey, Aug. 9, 1902 (*see* p. 118).

3. H.R.H. PRINCE WILHELM OF DENMARK (GEORGE I., KING OF THE HELLENES, from June 6, 1863), born Dec. 24, 1845, married Oct. 27, 1867, H.R. & I.H. the Grand Duchess Olga of Russia, died at Salonika, March 18, 1913.

4. H.R.H. PRINCESS DAGMAR OF DENMARK, born Nov. 26, 1847, married Nov. 9, 1866, Alexander III., *Emperor of All the Russias*.

5. H.R.H. PRINCESS THYRA OF DENMARK, born Sept. 23, 1853, married Dec. 21, 1878, the *Duke of Cumberland*.

6. H.R.H. PRINCE VLADEMAR OF DENMARK, born Oct. 27, 1858, married Oct. 20, 1885, Princess Marie of Orleans.

The Family of Queen Victoria.

VICTORIA, the only daughter of H.R.H. the Duke of Kent, son of George III., was *born* May 24, 1819; *succeeded* to the Throne June 20, 1837; *crowned* June 28, 1838; *married* Feb. 10, 1840, Albert, Duke of Saxony, Prince of Coburg and Gotha, PRINCE CONSORT (*born* Aug. 26, 1819, *died* Dec. 14, 1861); *died* Jan. 22, 1901. Her Majesty had issue:—

1. H.R.H. Princess Victoria (*Princess Royal*), born Nov. 21, 1840; married Jan. 25, 1858, Frederic, Crown Prince of Prussia, afterwards German Emperor; died Aug. 5, 1901.

ANNUITIES TO THE ROYAL FAMILY.

The annuities payable to Their Majesties and to the members of the Royal Family are known as the *Civil List*, which is granted by Parliament upon the recommendation of a Select Committee. The Civil List of King Edward VII. amounted to £470,000, in addition to which annuities to other members of the Royal Family accounted for an additional annual sum of £106,000. The Select Committee appointed on June 14, 1910, reported on July 7, and made the following recommendations, which were adopted by the House of Commons:—

Their Majesties' Privy Purse	£110,000
Salaries of Household	125,800
Expenses of Household	193,000
Works	20,000
Royal Bounty	13,200
Unappropriated	8,000
	£470,000

Queen Alexandra	£70,000
Princess Christian	6,000
Princess Louise (Duchess of Argyll)	6,000
Duke of Connaught	25,000
Duchess of Edinburgh	6,000
Duchess of Albany	6,000
Princess Beatrice	6,000
King Edward VII.'s Daughters	18,000

IN a broad sense this heading is commonly taken as identical with that of the House of Lords, although there are close upon 130 holders of titles of long-standing nobility who are not members of the Upper House of Parliament, their peerages being those of Scotland or Ireland only. But there are about an equal number of Peers of those kingdoms who possess additional titles which constitute them members of the House of Lords, these titles being in a majority of instances, though very far from all, inferior to those by which they are generally known. The full details as to each are given under his leading title, and a reference is in every case supplied under any other that he may hold, so that the table of equivalent titles formerly given in this work is no longer needed: a double index will be found in "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE AND COMPANIONAGE."

Contractions.—*S.* or *I.* appended to the date of creation denotes a *Scottish* or *Irish* title; the further addition of a * implies that the Peer in question holds also an Imperial title, which is specified (after the name) by its more definite description as *Engl.*, *Brit.*, or *U.K.* When both titles are alike, as in the case of Argyll, this star is appended to the conjoined date below, and it then denotes that such date is that of the Imperial creation. A † appended to *S.* or *I.* implies that the Peer is an elected Representative to the House of Lords. For the mark ° see heading to Marquesses; *b.*, signifies born; *s.*, succeeded; *m.*, married; *w.*, widower or widow; *div.*, divorced; *M.*, minor.

COMPLETE LIST OF THE PEERS.

ROYAL DUKES (3).—*Style*, His Royal Highness the Duke of ——. *Addressed as*, Sir, or more formally, May it please your Royal Highness.

Created.	*Title, Name, &c.*	*Eldest Son or Heir.*

Usher of the Black Rod, Samuel Murray Power, C.B.

THE ORDER OF MERIT (1902)—O.M.

Ribbon, Blue and Crimson.

O.M. Civ.

This Order confers no precedence, but authorises the holders to place its designating initials next after those denoting membership of Grand Cross of the Order of the Bath. It is designed as a special distinction for eminent men and women—without in itself conferring a knighthood. The Order is limited in numbers to 24, with the addition of foreign honorary members. Membership is of two kinds, Military and Civil, the badge of the former having crossed swords, and the latter oak leaves. Membership is designated by the suffix O.M., which is authorised to follow the first class of the Order of the Bath and to precede the letters designating membership of the inferior classes of the Bath and all classes of the remaining Orders of Knighthood.

O.M. Mil.

MILITARY MEMBERS.

Admiral of the Fleet Rt. Hon. Sir Edward Hobart Seymour, G.C.B., G.C.V.O.

Admiral of the Fleet Sir A. Knyvett Wilson, Bt., V.C., G.C.B., G.C.V.O.

Field-Marshal Rt. Hon. Viscount French, K.P., G.C.B., G.C.V.O.

Admiral of the Fleet Rt. Hon. Viscount Jellicoe, G.C.B., G.C.V.O.

Field-Marshal Rt. Hon. Earl Haig, K.T., G.C.B., G.C.V.O., K.C.I.E.

Admiral of the Fleet Rt. Hon. Earl Beatty, G.C.B., G.C.V.O., D.S.O.

CIVIL MEMBERS.

Rt. Hon. Viscount Morley of Blackburn, F.R.S.

Rt. Hon. Viscount Bryce, F.R.S.

Professor Henry Jackson, LITT.D.

Thomas Hardy, LITT.D., LL.D.

Rt. Hon. Sir George Otto Trevelyan, Bart.

Sir Edward Elgar, MUS. DOC.

Sir Joseph John Thomson, F.R.S.

Sir Archibald Geikie, K.C.B., F.R.S.

Rt. Hon. Viscount Haldane, K.T.

Rt. Hon. Arthur James Balfour.

Rt. Hon. David Lloyd George.

Earl Buxton, P.C., G.C.M.G.; *Secretary*, Sir George Fiddes, G.C.M.G., C.B.; *King of Arms*, Sir M. F. Ommanney, G.C.M.G., K.C.B., I.S.O.; *Registrar*, H. C. M. Lambert, C.B.; *Gentleman Usher of the Blue Rod*, Sir Reginald L. Antrobus, K.C.M.G., C.B.; *Chancery*, Colonial Office, S.W.—G.C.M.G., Knight Grand Cross; K.C.M.G., Knight Commander; C.M.G., Companion.

THE MOST EMINENT ORDER OF THE INDIAN EMPIRE (1878).

(Since enlarged five times.) *Ribbon*, Purple. *Imperatricis auspiciis.*

Sovereign, The King-Emperor; *Grand Master*, The Viceroy and Governor-General of India for the time being; *Secretary* (in India), John B. Wood, C.I.E.; *Registrar*, The Comptroller of the Lord Chamberlain's Department.—G.C.I.E., Knight Grand Commander; K.C.I.E., Knight Commander; C.I.E., Companion.

THE ROYAL VICTORIAN ORDER (1896).

Ribbon, Blue, with Red and White Edges.

G.C.V.O.

K.C.V.O.

The Sovereign; *Chancellor*, The Lord Chamberlain; *Secretary*, The Keeper of His Majesty's Privy Purse; *Registrar*, Francis M. Bryant, C.B.E., M.V.O., I.S.O.—G.C.V.O., Knight Grand Cross; K.C.V.O., Knight Commander; C.V.O., Commander; M.V.O., Member, marked 4th or 5th Class.

THE MOST EXCELLENT ORDER OF THE BRITISH EMPIRE (1917).

Ribbon, Purple (Civil Division); Purple, with Red Centre Stripe (Military Division).

The Sovereign; *Grand Master*, H.R.H. the Prince of Wales; *Prelate*, Rt. Rev. the Bishop of London; *King of Arms*, Gen. Rt. Hon. Sir Arthur H. F. Paget, G.C.B., K.C.V.O.; *Registrar*, The Comptroller of the Lord Chamberlain's Dept. (*ex officio*); *Secretary*, The Permanent Under-Sec. of State for Home Dept. (*ex officio*); *Gentleman Usher of the Purple Rod*, Sir Frederic G. Kenyon, K.C.B. For services rendered to the Empire, whether at home or abroad, open to both men and women. G.B.E., Knights Grand Cross or Dames Grand Cross; K.B.E., Knights Commanders; D.B.E., Dames Commanders; C.B.E., Commanders; O.B.E., Officers; M.B.E., Members. The Order was divided into *Military* and *Civil* divisions in Dec., 1918.

ORDER OF THE COMPANIONS OF HONOUR (1917)—C.H.

Ribbon, Carmine, with Gold Edges.

This Order consists of one Class only and carries with it no title or precedence, but ranks after the 1st Class of the Order of the British Empire, *i.e.*, Kts. Grand Cross (Mil. and Civ. Div.). The number of awards is limited and is open to both sexes.

THE DISTINGUISHED SERVICE ORDER (1886)—D.S.O.

Ribbon, Red, with Blue Edges.

Bestowed in recognition of especial services in action of commissioned officers in the Navy, Army and Royal Air Force. The members are Companions only and rank immediately after the 4th Class of the Royal Victorian Order. A Bar may be awarded for any additional act of service.

THE IMPERIAL SERVICE ORDER (1902, enlarged 1912)—I.S.O.

Ribbon, Crimson, with Blue Centre.

Restricted to members of the administrative or clerical (clerk) branches of the Civil Service, and consists of the Sovereign, the Prince of Wales, and Companions (not exclusively male) to a number not exceeding 700, of whom 250 may belong to the Home Services, 200 to the Indian (100 European and 100 Indian) and 250 to the services of Dominions, Colonies and Protectorates.

THE ROYAL ORDER OF VICTORIA AND ALBERT (for Ladies)—V.A.

Ribbon, White Moiré.

Instituted in 1862, and enlarged in 1864, 1865, and 1880, but no fresh conferments are now made.

THE IMPERIAL ORDER OF THE CROWN OF INDIA (for Ladies)—C.I.

Instituted 1878. *Ribbon*, Light Blue, with White Edges.

THE ORDER OF ST. JOHN OF JERUSALEM.

Ribbon, Black.

The Order had its origin in Jerusalem and Acre, as an international lay confraternity for the relief of crusaders, and was later sovereign in Rhodes and in Malta, where its Knights kept galleys and galleons, to attack the Barbary Corsairs and to prevent the spread of Turkish rule in the Mediterranean, from 1530 till 1798. The work of the British Order is the control of the St. John's Ambulance and Brigade, and of the British Ophthalmic Hospital, Jerusalem. *Sovereign Head and Patron*, H.M. King George V.; *Grand Prior*, H.R.H. Duke of Connaught, and Strathearn. *Chapter*, 350 knights of two degrees—"Knights of Justice" and "Knights of Grace." There are also "Ladies of Justice," "Ladies of Grace," and Esquires. These distinctions are notified in the *London Gazette*, but do not confer any rank or title.

ST. MICHAEL & ST. GEORGE, INDIAN EMPIRE, ROYAL VICTORIAN ORDER AND BRITISH EMPIRE.

(EXCLUSIVE OF THOSE HOLDING HIGHER RANK AS PEERS, BARONETS, OR KNIGHTS OF THE GARTER, THISTLE, AND ST. PATRICK, *q.v.*) *For Knights Bachelor, see* pp. 165–169.

Members 4th Class of the Royal Victorian Order.
Officers of the British Empire.
Companions of the Imperial Service Order.
Eldest Sons of younger Sons of Peers.
Baronets' eldest Sons.
Eldest Sons of Knights in order of their Fathers.
Members 5th Class of the Royal Victorian Order.
Members of the British Empire.
Younger Sons of the younger Sons of Peers.
Baronets' younger Sons.
Younger Sons of Knights in the same order as their Fathers.
Naval, Military, and other Esquires by Office.

Women take the same rank as their husbands or as their eldest brothers; but the daughter of a Peer marrying a Commoner retains her title as Lady or Honourable. Daughters of Peers rank next immediately after the wives of their elder brothers, and before their younger brothers' wives. Daughters of Peers marrying Peers of lower degree take the same order of precedency as that of their husbands; thus the daughter of a Duke marrying a Baron degrades to the rank of Baroness only, while her sisters married to commoners retain their rank and take precedence of the Baroness. Merely official rank on the husband's part does not give any similar precedence to the wife.*

There are three Orders confined to Ladies: The Order of Victoria and Albert, the Crown of India, and the Royal Red Cross; but members are entitled to no special precedence. The Order of the British Empire is open to Ladies, the two highest classes being styled Dames Grand Cross and Dames Commanders.

LOCAL PRECEDENCY.—No written code of county or city order of precedence has been promulgated, but naturally in the county the Lord Lieutenant stands first, and secondly the Sheriff. In London and other Corporations, the Mayor stands first, after him the Aldermen, Sheriffs, Chief Officers, and Livery. At Oxford and Cambridge the High Sheriff takes precedence of the Vice-Chancellor.

* For fuller tables (and for *Scottish and Irish Precedency*) see Introduction to "WHITAKER'S PEERAGE, BARONETAGE, KNIGHTAGE AND COMPANIONAGE," a companion volume, price 21s. net.

Knights Bachelor.

The Knights Bachelor do not constitute a Royal Order, but comprise the surviving representation of the ancient State Orders of Knighthood. The Register of Knights Bachelor, instituted by James I. in the 17th century, lapsed, and in 1908 a voluntary association under the title of "The Society of Knights" (now "The Imperial Society of Knights Bachelor" by Royal command) was formed with the primary objects of continuing the various registers dating from 1257 and obtaining the uniform registration of every created Knight. An annual Knighthage is published from information supplied by the authorities, and can be obtained on application. The Officers of the Society are :—*Principal*, Sir Henry Pellatt, Kt., C.V.O. ; *Vice-President*, Sir William Bull, Kt., M.P. ; *Hon. Registrar*, Sir Harry North ; *Clerk*, H. Whelbourn ; *Registry and Library*, 2 Mitre Court, Temple, E.C. 4.

A LIST OF THE GENTLEMEN WHO HAVE RECEIVED THE HONOUR OF KNIGHTHOOD.
(*Exclusive of such as have afterwards received the higher honour of* K.C.B., *etc.*, *q.v.*)

Abdur Rahim, Hon. Sir.
Acland, Sir R. B. Dyke, K.C.
Acton, Hon. Sir Edward.
Adams, Sir John Coode-.
Addis, Sir Chas. Stewart.
Adkins, Sir Ryland, K.C., M.P.
Affleck, Sir J. Ormiston, M.D.
Aikins, Sir James A.M.
Aird, Sir John.
Aitken, Sir Robert.
Alcazar, Sir Hy. Albert, K.C.
Alexander, Sir Sidney R.
Allan, Sir H. Montagu, C.V.O.
Allen, Sir Harry B., M.D.
Allen, Sir Hugh P., M.D.
Allen, Sir Thomas Wm.
Allison, Sir Robt. Andrew.
Alloa, Sir Charles.
Ambalawanar Kanagasabi, Sir.
Ames, Sir Herbert Brown.
Anderson, Sir Arthur Robt., C.I.E., C.B.E.
Anderson, Sir George.
Anderson, Sir John.
Anderson, Sir Robert N.
Anderson, Sir R. Rowand.
Anderson, Sir Wm. M. A., M.V.O.(4th).
Andrews, Prof. Sir Fredk. William, F.R.S.
Angier, Sir Theodore V. S.
Anthony, Sir John.
Arbuthnot, Sir Geo. Gough.
Archibald, Sir William F. A.
Armstrong, Sir Charles H.
Arthur, Sir Allan.
Ashdown, Sir Curtis George
Ashley, Sir W. J.
Ashton, Sir Ralph P.
Ashutosh Chaudhuri, Hon. Sir.
Ashutosh Mukarji, Sir, C.S.I.
Aske, Sir Robt. W., T.D., LL.D.
Aspinall, Sir J. Audley F.
Astbury, Hon. Sir Jn. Meir.
Atkin, Rt. Hon. Sir J. Richard.
Atkinson, Sir Wm. Nicholas, I.S.O., LL.D.
Avory, Hon. Sir Horace E.
Ayling, Hon. Sir Wm. Bock.
Baddeley, Sir John James.
Bailey, Sir Rowland, C.B. (*c*), I.S.O., M.V.O.(5th).
Bailhache, Hon. Sir Clement M.
Baines, Sir Athelstane, C.S.I.
Baines, Sir Frank, C.B.E., M.V.O.(5th).
Baker, Sir Augustine F.
Baker, Sir John, M.D.
Baker, Sir Wm. Frederick.
Baldwin, Sir Harry, M.R.C.S.
Balfour, Sir Graham.
Ballantyne, Sir Henry.
Bam, Sir Pieter Canzius van Blomestein Stewart-, O.B.E.
Banatvala, *Col.* Sir Hormasjee Eduljee, C.S.I.
Bancroft, Sir Squire B.
Bandaranaike, Sir Solomon Dias, C.M.G.
Bankes, Rt. Hon. Sir Jno. Eldon.
Banner, Sir J. S. Harmood-, M.P.
Barber, Sir Edward F.
Barclay, Sir Thomas, LL.B.
Barclay, Sir Thomas.
Barker, *Capt.* Sir D. Wilson.
Barker, Sir Francis H.
Barker, *Col.* Sir Fras. W. J.
Barker, Sir Fredk. E.
Barnard, Sir Herbert.
Barnes, Sir Frederic Gorell.
Barnsley, *Br.-Gen.* Sir John, V.D.
Barr, Sir James, C.B.E., M.D.
Barran, Sir Rowland H.
Barrett, Sir Wm. Fletcher, F.R.S.
Barrett, Sir Wm. Scott.
Barrie, Sir Charles.
Bartlett, Sir Herbert Folgerstreet, I.S.O.
Barton, Sir John George, C.B.
Barton, Sir William, M.P.
Batchelor, Sir Stanley L.
Baxter, Sir George W.
Beachcroft, Sir Melville.
Beaman, Sir Frank C. O.
Bean, Sir George.
Beard, Sir Lewis.
Beardsell, Sir William A.
Beattie, Sir Andrew.
Beattie, Sir Jno. Carruthers
Beauchamp, Sir Sidney.
Beaufort, Sir Leicester P.
Beaumont, Hon. Sir William Henry.
Beck, Hon. Sir Adam.
Beck, Sir A. Cecil T., M.P.
Beck, Sir Raymond.
Bedford, *Lt.-Col.* Sir Charles H., LL.D., J.M.S.
Begbie, Sir James.
Beharrel, *Lt.-Col.* Sir John Geo., D.S.O.
Behrens, Sir Charles.
Beilby, Sir George Thos., F.R.S.
Bell, Sir James, C.V.O.
Bennett, Sir Courtenay W., C.I.E.
Bennett, Sir F. Sowerby.
Bennett, Sir Wm. Fletcher.
Benson, Sir Frank R.
Benson, Sir J. Hawtrey, M.D.
Berry, Sir Geo. Andreas, M.B.
Berry, Hon. Sir Wm. Bisset.
Bertram, *Brig.-Gen.* Sir Alexander.
Bertram, Sir Anton, K.C.
Bethell, Sir Thomas Robert.
Bezonji Dadabhoy Mehta, Sir.
Bhalchandra Krishna Bhatawadekar, Sir.
Biggs, *Maj.* Sir Arthur W.
Biles, Sir John Harvard.
Binning, Sir Arthur Wm.
Binod, Chandra Mitra, Sir.
Bipin Krishna Basu, Sir, Rai Bahudur, C.I.E.
Bird, Sir Alfred Fredk., M.P.
Bird, Sir Henry Busby.
Bird, Sir James.
Bird, Sir William B. M.
Birkett, Sir Thomas W.
Birkmyre, Sir Archibald, C.B.E.
Biron, Sir Hy. Chartres.
Black, Sir Arthur Wm.
Blades, Sir Geo. Rowland, M.P.
Blair, Sir Robert.
Blomfield, Sir Reginald T.
Bodkin, Sir Archibald.
Bois, Sir Stanley.
Bond, Sir Walter McGeough.
Bosanquet, Sir Fredk. A., K.C.
Boscawen, *Lt.-Col.* Rt. Hon. Sir A. S. T. Griffith-, M.P.
Bourne, Sir Frederick Samuel A., C.M.G.
Bovell, Sir Henry Alleyne.
Bowater, Sir William Henry.
Bower, Sir Alfred L.
Bowring, Hon. Sir Edgar R.
Bowron, Sir Edward.
Boyson, Sir John Alex.
Boyton, Sir James.
Brabrook, Sir Edwd. W., C.B.
Braddell, Sir Thomas de M.L.
Bradford, Sir James.
Bradley, *Col.* Sir A. Montague, T.D.
Brain, Sir Francis W. T.
Bramston, Sir Thos. A., M.P.
Bray, His Honour Sir Edwd.
Bray, *Br.-Gen.* Sir Edward Hugh.
Bray, Hon. Sir Reginald M.

THE DUCHY OF LANCASTER.

Office, Lancaster Place, Strand, W.C. 2.

Lancaster was erected into a Palatine Duchy by Edward III. for his son John of Gaunt in 1359, but in 1399 it became merged in the Crown through the accession of his son as Henry IV.

The Revenue of the Duchy of Lancaster was £29,000 in 1847, and amounted to £113,234 in the year ended December 31, 1919. The contributory items are Rents and Profits of Courts, £62,987; Royalties and Dues, £32,010. Expenditure: £10,227, Outlay for the benefit of the Estate; £31,297, deducted under various Acts of Parliament; £7,263, Allowances, Donations, and Charities; £2,000, Salary of the Chancellor of the Duchy; and £9,738, Expenses of Management. The sum of £45,000 was paid (for His Majesty's use) to the Keeper of His Majesty's Privy Purse.

Chancellor, Rt. Hon. Earl of Crawford.
Private Sec., L. F. Fergusson.
Vice-Chancellor, R. B. Lawrence, K.C.
Attorney-Gen., Robert Alfred McCall, K.C.
Receiver-Gen., Lt.-Col. Sir F. Ponsonby, K.C.V.O., C.B.
Auditor, F. W. Pixley.
Clerk of Council & Registrar, Wm. Rose Smith, C.B., C.V.O.
Solicitor, Douglas Houstoun.
Assistant Solicitor, Eliot A. C. Druce.
Surveyor-Gen. and Deputy Receiver-Gen., T. Vaughan Prickard.
Coroner, A. M. M. Forbes.
Chief Clerk, H. E. Mitchell.
Registrar, Preston Dist., T. B. Blackburne.
Do. Liverpool Dist., Roger W. Lowden.
Do. Manchester Dist., Hubert Winstanley.
Constable of Lancaster Castle, Sir Wm. Scott Barrett.

THE DUCHY OF CORNWALL.

Buckingham Gate, S.W. 1.

Cornwall was created a Duchy by Edward III. for the support of his eldest son (afterwards created Prince of Wales), and the eldest son of the Sovereign has since that time been born Duke of Cornwall.

The Revenue of the Duchy of Cornwall in the year ended December 31, 1919, was £166,354, and was derived principally from Rents and Profits of Courts, £130,969; Annuity in lieu of Tin Coinage Duties, £16,217; and Dividends on Stock, £7,021. The Payments include £33,086, Outlay for the benefit of the Estate; £57,767, Deductions under various Acts; £18,457, Allowances, Donations, and Charities; and £14,359, Expenses of Management. The sum of £42,000 was paid on account of His Royal Highness the Prince of Wales.

Prince of Wales's Council.

The Lord Balfour of Burleigh, K.T., G.C.M.G. (*Lord Warden of the Stannaries*); The Lord Clinton (*Keeper of Privy Seal*); The Lord Revelstoke, G.C.V.O. (*Receiver-General*); Earl Fortescue; Hon. Sir Sidney Robert Greville, K.C.V.O., C.B.; Walter Peacock, C.V.O. (*Sec. and Keeper of Records*).

Officers of the Duchy of Cornwall.

Auditor, L. S. Halsey.
Solicitor, R. E. Tucker.
Asst. Sec., Bernard K. R. Wilkinson.
Deputy Keeper of the Records, J. C. Fisher.
Clerk Surveyor, W. Kirk.
Deputy Receiver, A. E. Gillett.
Sheriff, E. G. B. Lethbridge.

EXCLUSIVE OF SUCH COMPANIONS AS HOLD HIGHER DISTINCTIONS, *q.v.*

The sequence of Companions, &c., is—C.B., C.S.I., C.M.G., C.I.E., C.V.O., C.B.E., D.S.O., M.V.O. 4th Class, O.B.E., I.S.O., M.V.O. 5th Class, M.B.E.

For Commanders of the British Empire, Companions of the Distinguished Service Order, Members of the Royal Victorian Order, Officers of the British Empire, and Companions of the Imperial Service Order, see WHITAKER'S PEERAGE.

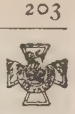
THE VICTORIA CROSS. V.C.

Ribbon, Crimson for all Services.

For Conspicuous Bravery. Instituted *29th January*, 1856.



Instituted in 1856, on the close of the Crimean War, and extended to civilians who had borne arms against the Indian mutineers. In 1911 the decoration was extended to the Indian Army. A bar may be awarded for any additional act of gallantry. Conjoined with the decoration is a pension, for non-commissioned officers and men, of £10 a year, with an additional £5 for each bar.

A list of surviving recipients and of the posthumous awards (names in *italic type*) made since Jan. 1, 1920.

The Distinguished Service Cross.—1914.—D.S.C.—In substitution for the Conspicuous Service Cross, 1901; is designed for bestowal on all officers of the R.N. below the rank of Lieutenant-Commander.

The Military Cross.—1915.—M.C.—Awarded to Captains, Lieutenants, and 1st class Warrant Officers in the Army and Indian and Colonial Forces.

The Distinguished Flying Cross.—1918.—D.F.C.—Designed for bestowal upon officers in the Royal Air Force for acts of gallantry when flying in active operations against the enemy.

The Air Force Cross. 1918—A.F.C.—Instituted as preceding, but for acts of courage or devotion to duty when flying, although not in active operations against the enemy.

The Military Medal.—1916.—M.M.—Awarded to non-commissioned officers and men for individual or associated acts of bravery in the Field. In exceptional circumstances the Medal may be awarded to women of all nations.

The Distinguished Service Medal.—1914.—D.S.M.—Is designated for chief petty officers, petty officers, men, and boys of all branches of the R.N.; to non-commissioned officers and men of the R.M.A., and to all other persons holding corresponding positions in His Majesty's Service afloat, for distinguished conduct in war.

The Distinguished Flying Medal.—1918.—D.F.M.—and **the Air Force Medal,** for warrant and non-commissioned officers and men for equivalent services as for D.F.C. and A.F.C.

The Conspicuous Gallantry Medal. — C.G.M. — Is bestowed upon warrant officers and men of the R.N.

The Distinguished Conduct Medal.—D.C.M.—Awarded to warrant officers, non-commissioned officers, and men of the Army.

The Volunteer Officers' Decoration—V.D.—Was an honour for rewarding the meritorious services of officers of the force in question, who must have been in commission and have served twenty years.

The Territorial Decoration—T.D.—Established in 1908; is restricted to commissioned officers of twenty years' good service in the Territorial Force, and not holders of the Volunteer Decoration. Similarly, a **Territorial Long Service Medal** has been substituted for that formerly awarded to Volunteers.

The Royal Red Cross—R.R.C.—For ladies, founded 1883, is a distinction conferred upon ladies of any rank or nation who may be brought to the Sovereign's notice for acts of mercy in attending to the sick or wounded in time of war.

The Order of Mercy.—Both sexes; was established in 1809 in connexion with the **League of Mercy**, an institution also founded in 1899 to promote the welfare of hospitals by obtaining small subscriptions for King Edward's Hospital Fund for London, &c.

The Indian Order of Merit.—Instituted in 1837, as a reward for personal bravery, to Indian officers and men.

The Kaiser-i-Hind Medal.—Was founded in 1900, and is a reward for any person, of either sex, who shall have rendered useful service in or for India.

The Albert Medal.—Dates from 1866, with extensions in 1867 and 1877, and is a recognition of acts of gallantry performed by any person whatever—"For Gallantry in Saving Life at Sea" or "on Land."

*** All the above vacate office on a change of Government.

Premiers, Principal Secretaries,

Premiers and Secretaries of State.—The inability of George I. to understand the English language made his attendance at meetings of the Cabinet "useless and irksome, and allowed the appearance of a Prime Minister, for his example has been so consistently followed as to have become a settled custom." In 1905 the office of Prime Minister was officially recognised. The first mention of a King's Secretary of State is under Henry III. In 1433, owing to press of work in France, two Secretaries were appointed, and until 1794 two seems to have been the normal number. From 1688 to 1782 one of the two dealt with matters pertaining to the Northern States of Europe, the other with matters pertaining to the Southern States, Home, Irish, and Colonial business. In

1782 the former became Foreign and the latter Home Secretary, still retaining Irish and Colonial business. The Home Secretary was also responsible for the Secretary at War, who, though not a Secretary of State, directed the movements, payment, and civil control of the Army. In 1794 a Secretary of State for War was appointed to manage all military business, and in 1801 he was given the control of the Colonies. In 1854 the War Secretary was relieved of Colonial business, and a fourth Secretary of State was appointed for the Colonies. In 1858 the Secretary of State for India was appointed, and in 1918 the Royal Air Force was constituted, with a Secretary of State as President of the Air Council.

The third Parliament of King George V. was elected in December, 1918, and met on February 4, 1919. The General Election had returned 478 supporters of the Coalition (334 Unionists; 133 Liberals; 11 Labour) and 229 Non-Coalition (63 Labour; 48 Unionists; 28 Liberals; 73 Sinn Feiners; 7 Nationalists; and 10 Independents), distributed as shown in the following table:—

	Distribution of Members.				Party Strength (Jan., 1919).		
	Counties.	Boroughs.	Universities.	Total Members.	Coalition.	Non-Coalition.	Majority.
England	230	255	7	492	401	91	310 *Coalition.*
Wales	24	11	1	36	21	15	6 *Coalition.*
Scotland	38	33	3	74	56	18	38 *Coalition.*
Ireland	80	21	4	105	—	105	105 *Non-Co.*
United Kingdom	372	320	15	707	478	229	249 *Coalition.*

Only successful candidates who received the recognition of the Prime Minister and Mr. Bonar Law are included among the supporters of the Coalition. Thus, the Irish Unionists are omitted from the Ministerialists, although, like many other Non-Coalition members, they are in general agreement with the Government.

ALPHABETICAL LIST OF MEMBERS OF PARLIAMENT.

The following list gives Surname, Initials, Politics, Key Number of Seat on pp. 217–230, Name of Division, and Majority at Last Election of each of the 707 Members of Parliament.

Co. U. = Coalition Unionist; *Co. L.* = Coalition Liberal; *Co. Lab.* = Coalition Labour; *U.* = Unionist; *L.* = Liberal; *Lab.* = Labour; *Ind.* = Independent; *N. P.* = Nationalist Party; *N. D. P* = National Democratic Party; *N.* = Nationalist; *S. F.* = Sinn Fein.

SESSION 1919.

THE ALIENS BILL.—The first measure considered after the recess was the Aliens Restriction Bill, which had been extended in scope against the desire of the Government during its passage through the Standing Committee. On *Oct.* 23 the Home Secretary sought to qualify the provision that "no alien shall hold a pilotage certificate for any port in the United Kingdom" by excepting a handful of French pilots whose certificates had been guaranteed some years earlier by an agreement with France. The amendment was defeated by 185 to 113, and Mr. Bonar Law at once moved the adjournment to enable the Government to decide on their action. After a consultation during the succeeding week-end with the anti-alien leaders, Mr. Bonar Law asked the House on *Oct.* 27 to accept an amendment safeguarding the existing French interests, but excluding all other foreign pilots from British ports. This settlement was accepted. On *Nov.* 4, on a free vote, an amendment to Clause 9 was carried by 226 to 116, providing that every former enemy alien in the United Kingdom should be deported forthwith unless the Home Secretary granted a licence to remain, those given exemption from internment or repatriation by the Advisory Committee during the war being excepted. A new clause, added on *Nov.* 13, made it unlawful for three years from the passing of the Bill for a former enemy alien to acquire any land or interest in land or industry in the United Kingdom. The Bill was read a third time on *Nov.* 18. The Lords made several amendments in Committee on *Dec.* 9. On the motion of Lord Newton, the Upper Chamber agreed that former enemy aliens need not be deported if the Advisory Committee recommended the Home Secretary to grant a licence to remain. Another amendment added permitted a former enemy alien to land if he were provided with a passport issued by a competent authority of his own country and bearing the visa of a British Consul. On the report stage, on *Dec.* 15, an amendment was adopted that the permission to land should be given only on special grounds. The Commons, by 128 to 66, disagreed with the Lords' amendment to Clause 9 on *Dec.* 17, but the Peers insisted, and the other House eventually decided to accept rather than lose the whole Bill, which received the Royal Assent on *Dec.* 23, when Parliament was prorogued.

THE IRISH PROBLEM.—Just before the Session ended, the Prime Minister, on *Dec.* 22, outlined the Cabinet's proposals for Irish self-government. Mr. Lloyd George referred to the outburst of crime in Ireland, and remarked that three-fourths of the population were hostile to British government. He declared that North-East Ulster had as rightful a claim to autonomy as the rest of Ireland, and as emphatically repudiated the Sinn Fein demand for separation. Under the Bill which would be introduced two self-governing Parliaments would be established —one for Protestant North-East Ulster at Belfast, and the other for the rest of Ireland at Dublin. A Federal Council of forty members, elected in equal parts by the two Legislatures, would form a connecting link, and would have full responsibility for private bill legislation for the whole of Ireland at the outset, and any other powers delegated to it by the two provincial Parliaments. The latter would have full legislative powers over all subjects not expressly reserved to the Imperial Parliament at Westminster, where 42 Irish representatives would sit. They would also possess full constituent powers for the creation of a single Irish Legislature, but action to this end must rest with them and not with the Imperial Parliament. Until there was a single Parliament, the postal services would not be transferred, while Customs, excise, income-tax, and excess profits would also be reserved, though each Parliament would have the same powers over taxation as were possessed by State Legislatures in the United States. A free grant of £1,000,000 would be made to each Parliament to cover initial expenditure, as well as a permanent free grant of the existing annuities. Ireland's actual contribution to Imperial services would, after two years, be settled by a Joint Exchequer Board. The Prime Minister said the proposals would be embodied in a Bill and submitted at the earliest available opportunity. The world would know, he declared in conclusion, that Britain entered upon the task prompted only by that deep sense of justice and right which had sustained the nation during years of suffering.

INDUSTRIAL COURTS.—A serious attempt to prevent and settle trade disputes was made by the Industrial Courts Bill, which was presented by Sir Robert Horne on *Nov.* 3. The measure provided that existing or apprehended disputes reported to the Minister of Labour should be referred for settlement to a standing Industrial Court or a Court of Enquiry appointed by the Minister, and consisting of representatives of employers and workmen and independent persons. The provision of the Wages (Temporary Regulation) Act, 1918, were also extended until *Sept.* 30, 1920. During the third reading debate on *Nov.* 17, Mr. Henderson said the Bill, however useful it might be, provided no remedy for the more permanent aspects of industrial unrest. Both the Government and the employers, he said, must realise the pressing need for a comprehensive economic and industrial programme, which the Labour Party considered absolutely essential if they were to secure the permanent removal of widespread industrial unrest. The House of Lords passed the Bill on *Nov.* 20.

THE GOVERNMENT OF INDIA. — After being considered by a Joint Committe of the two Houses, the Government of India Bill, designed to carry out the proposals of the Viceroy and the Secretary of State for the realisation of responsible government in India, was returned to the House of Commons on *Dec.* 3, and two days later received its third reading. Mr. Montagu, who was congratulated by Sir Donald Maclean and Mr. Adamson, said although there were great dangers and anxieties, he was certain that there was no better way of consolidating the British Empire than by initiating a measure of this kind and steps in this direction. Lord Sinha had charge of the Bill in the Upper Chamber, and the Royal Assent was accorded on *Dec.* 23.

HIGHER OLD AGE PENSIONS.—On the eve of the adjournment, the Government agreed to the obvious desire of the House of Commons to increase the old age pensions, and on *Dec.* 19, after the necessary money resolution had been dealt with, the House passed through all its stages a

Bill to raise the pension to 10*s.* a week, the increased expenditure being estimated at £10,000,000. The Upper Chamber followed suit on *Dec.* 22, and on the following day the measure received the Royal Assent. The increase came into force on New Year's Day, though it was a few weeks later before it was possible to make the extra payments, which varied according to the income of the pensioners.

THE FIRST WOMAN M.P.—As a result of the Plymouth bye-election, Viscountess Astor, the wife of the former member who necessarily resigned on succeeding to a peerage, became the first woman M.P. to sit in the House of Commons. She took her seat on *Dec.* 1, the Prime Minister and Mr. Balfour acting as her sponsors in a crowded Chamber. Lady Astor postponed her maiden speech until the following Session, but was in constant attendance. A Bill to remove disqualifications of sex in regard to the Bench and Bar, the magistracy and juries, was passed during the sitting. The Commons on *Oct.* 27, by 171 to 84, inserted an amendment to enable a peeress in her own right to sit in the House of Lords; but the Upper Chamber deleted this proposal on *Nov.* 11, and the Commons accepted the correction.

THE HOUSING SCHEME.—Although Dr. Addison admitted on *Nov.* 21 that the actual building under the Housing Act was trivial, he said that real progress had been made. The Ministry of Health had approved 24,000 acres of land properly laid out and planned for housing, and a further 24,000 acres had been surveyed and would mostly be accepted. To assist the situation, he explained, the Government had decided to offer a subsidy towards the cost of building houses at once. Any person who built within a specified time a house of an approved type would receive a maximum subsidy of £150, based on the cubic feet of space. Steps would be taken, Dr. Addison added, to prohibit non-essential "luxury" building, such as cinemas. The Prime Minister appealed to workmen to put their backs into the work, and asked local authorities to organise local loans for housing. A Bill was later passed to provide for the subsidy, Dr. Addison, in moving the second reading on *Dec.* 8, stating that the grants in aid would be from £130 to £150, according to the size of the house concerned. Local authorities were authorised by the measure to issue bonds to help them in financing their schemes.

THE CHURCH'S NATIONAL ASSEMBLY.—The Bill introduced by the Archbishop of Canterbury in the House of Lords to set up a National Assembly of the Church of England, with powers to legislate on matters affecting the Church, was given a second reading in the Commons on *Nov.* 7 by 304 to 16. In moving the second reading, Sir E. Beauchamp said that out of 217 Church Bills that had entered the House in the past thirty years, 183 had been lost and had never been heard of again. The third reading was secured on *Dec.* 5, after the insertion of an amendment that the Lord Chancellor and not the Lord Chief Justice should nominate the members of the Upper House to serve on the Ecclesiastical Committee. To this the House of Lords agreed on the suggestion of the Primate, and the Royal Assent was given on *Dec.* 23, when Parliament was prorogued.

SESSION 1920.

THE KING'S SPEECH.—The new Session was opened with full State, for the first time since 1914, on *Feb.* 10, the Prince of Wales being present when the King, who was accompanied by the Queen, read his Speech from the Throne. Among the legislation promised were the Bills for the better government of Ireland, for the adjustment of the financial arrangements of the Colonies, and the acquisition of coal royalties by the State. Other measures mentioned related to licensing, insurance against unemployment, and minimum wages, while proposals were announced to reform the Second Chamber. His Majesty alluded with pleasure to the coming visit of the Prince of Wales to Australasia. Satisfaction was expressed at the conclusion of the war with Germany, and the King declared that, to assure the full blessings of peace to Europe, it was essential that normal conditions of economic life should be restored in Russia. In the Upper Chamber the Address in reply, moved by the Marquis of Dufferin and seconded by Lord Charnwood, was agreed to on the same day. The Address in the Commons was moved by Lieut.-Col. S. Peel, D.S.O., and seconded by Mr. W. J. U. Woolcock. The Prime Minister expressed the hope that the House would apply itself to the great programme of legislation before it with the same industry, courage, and breadth as it had shown in the previous year. The Government were, he said, effecting the strictest and most relentless economy in every department of State. Referring to Russia, he said it was perfectly clear that Bolshevism could not be crushed by force of arms. There were objections to making peace with the Bolshevists until the Government in control of Russia had dropped its methods of barbarism and adopted civilised means. They had failed to restore Russian sanity by force, but believed they could do it and save her by trade. "There is but one way," he declared; "we must fight anarchy with abundance." On the following day a Labour amendment demanding nationalisation of the coal mines was rejected by 329 to 64, and the Address was agreed to on *Feb.* 13, after the defeat of an amendment criticising the Peace conditions by 254 to 60, and another expressing regret at the high Government expenditure by 188 to 44.

THE GOVERNMENT OF IRELAND.—The Bill outlined by the Prime Minister for dealing with the Irish situation was presented by Mr. Macpherson on *Feb.* 25, and received a second reading by 348 to 94 on *March* 31, after a three days' debate. The Irish Secretary said the proposed Council might become a real stepping-stone in the direction of union; its powers might be increased until it became a complete Parliament for Ireland. It was intended to apply proportional representation to all elections to the two Irish Parliaments, which would consist of 128 members for the Southern Parliament and 52 members for the Northern Parliament. The office of Lord Lieutenant would continue to exist, but there would be no religious disability attaching to the office, and there was no provision for the continuance of the post of Chief Secretary. The rejection was moved by Mr. Clynes. Mr. Asquith opposed the proposals, and said that no section of the Irish nation asked for them. He described the Bill as cumbrous, costly and unworkable, and urged that Ireland should be given the status of a dominion. Mr. Bonar Law said he was not

very sanguine that they were going to obtain a settlement in Ireland, and Sir Edward Carson said that although Ulster did not want the Bill, she would do her best. Mr. Lloyd George, winding up the debate, said he believed that they would get union in time from the Bill. The Committee stage opened on *May* 10, when Mr. Asquith moved an amendment, designed to set up a single Parliament, but giving counties the opportunity of withdrawing for a time from its jurisdiction. This was defeated by 259 to 55. On an amendment moved by Lord Robert Cecil on *May* 18, Mr. Walter Long accepted the principle of a second Chamber for each of the Irish Parliaments, and on *June* 3 the Government accepted an amendment preventing the transfer of the police forces from the control of the Imperial Government for three years after the Bill came into operation. Another amendment agreed to (on *June* 22) increased the number of Irish M.P.'s at Westminster from 42 to 46, by retaining the four University representatives. The further consideration was delayed until after the recess, but before the adjournment steps were taken to deal with the outbreak of lawlessness in Ireland, an emergency Bill, setting up special tribunals to supersede civil courts which had broken down, and empowering the Government to stop grants to local authorities which refused to discharge their duties, being passed.

THE BUDGET. — Enormous totals and many changes in taxation were revealed in the Budget presented by Mr. Austen Chamberlain on *April* 19. The Chancellor estimated the deadweight debt on *March* 31 at £7,835,000,000, and the floating debt at £1,312,205,000. For the year just commencing he put the total revenue, on the existing basis of taxation, at £1,341,650,000, and the expenditure at £1,177,452,000, leaving some £154,000,000 for the reduction of debt. This surplus he did not consider sufficient, and Mr. Chamberlain intimated that he intended to call upon the nation for further generous efforts to improve our position, to lighten our future burden, and to establish securely our national credit. Coming to his proposals, the Chancellor first dealt with the loss on the Post Office, and announced increases in the letter postage to 2*d.* for three ounces, and a halfpenny for each additional ounce, in the newspaper postage to 1*d.* for six ounces, in telegram rates to a minimum of 1*s.*, and in the parcels post corresponding to the rail rates. These changes, he estimated, would produce £6,500,000 this year. The existing motor-car tax and motor spirit duty would be continued until the end of the year, when they would be superseded by a new licence duty on motor vehicles estimated to produce £9,000,000 in a full year. After intimating that the Cabinet had decided to repeal the land values duty, which, he said, had produced hardly any revenue, Mr. Chamberlain said the duty on spirits would be increased by 22*s.* 6*d.* to 72*s.* 6*d.* a proof gallon (yielding £24,500,000 in a full year), and that on beer by 30*s.* a standard barrel, or one penny a pint (producing £30,000,000 in a full year), the wine duties would be doubled, and there would be imposed a special 50 per cent. *ad valorem* duty on imported sparkling wines (producing £4,800,000 in a full year), and a 50 per cent. *ad valorem* duty on cigars (£530,000 in a full year). Dealing with income-tax and super-tax, he said he proposed to adopt, with some trifling modifications, the recommendations of the Royal Commission in regard to graduation. These gave relief to families with marital responsibilities. In a full year the net cost to the Revenue from these changes would be £18,200,000, and a further charge to the Exchequer would result from relief in cases of double income-tax within the Empire. The Excess Profits Duty was increased to 60 per cent. until cancelled by a levy on increases in war wealth, and he proposed a new tax in the form of a Corporation Tax of 1*s.* in the £ on the profits and income of concerns with limited liability engaged in trade. The Chancellor estimated the changes to produce in a full year £198,230,000, while in the current year they would give an additional revenue of £76,650,000, making a total of £1,418,300,000. Approximately that would give £234,000,000 for the redemption of debt. On the following day Mr. Asquith appealed for the cessation of borrowing by the State, and for a reduction of debt in order to secure economy, while Mr. Clynes urged the imposition of a capital levy and greater production. Mr. Chamberlain justified the Excess Profits Duty, though not as a permanent part of the financial system. On the resolution for this tax, Sir Frederick Banbury moved its reduction from 60 per cent. to 40 per cent., but the Chancellor said it was impossible for the Government to accept the amendment, which was defeated by 287 to 75, and the Finance Bill was read a first time on *April* 28. The second reading was agreed to without a division on *May* 12. A resolution moved by Mr. Clynes, expressing regret at the Government's decision not to impose special taxation on war fortunes, was defeated by 244 to 81 on *June* 8. During the Committee stage, on *July* 6, Mr. Chamberlain agreed to reduce the additional duty on sparkling wines to 33⅓ per cent. On *July* 12 the House by 289 to 117, rejected an amendment the effect of which would have been to reduce the Excess Profits Duty from 60 per cent. to 40 per cent., and on the following day a similar fate met an attempt to omit co-operative societies from the operation of the Corporation Profits Tax. A new clause, designed to alleviate the pressure of the Excess Profits Duty in respect of new businesses and small businesses, was added by the Chancellor, as was another giving power to the Treasury to borrow on National Savings Certificates for purposes of investment in housing and other loans. The Committee stage was concluded on *July* 16, and the third reading was secured on *July* 28. The House of Lords quickly passed the measure, and separate legislation was agreed to providing for the Post Office changes.

POST-WAR LEGISLATION.—Moving the second reading of the Indemnity Bill on *May* 3, Sir Ernest Pollock said it dealt with the indemnity granted to persons who had carried out duties for the purpose of maintaining order and discipline during the War, and validated certain acts of grace and regulations made in different parts of the world. The measure provided that no proceedings should be instituted if the acts in question had been done in good faith. Another clause made valid sentences passed and judgments given by military courts in connection with the War or the occupation of territory by British forces. The Solicitor-General remarked that if a legal decision were allowed to stand, the Government might become liable for extra sums amounting to £850,000,000. The second reading was carried by 210 to 28. In Committee,

Sir Ernest said it was not intended to deprive the subject of compensation, of going to a court, or of the right of appeal, but it was to ensure that the same measure of compensation would be meted out to those whose claims had not been decided. The Royal Assent was given on the day of the adjournment. Another Bill, passed earlier in the Session, concerned the Peace Treaties with Austria and Bulgaria, Mr. Cecil Harmsworth, in moving the second reading on *April* 14, stating that it simply invested the King with the powers necessary for carrying out the business that followed the ratification of peace.

THE COAL INDUSTRY.—A measure making temporary provision for the control of colliery undertakings and the wages of miners until a more important scheme for the regulation of the industry could be set up was passed early in the Session. Later a Bill to establish a Ministry of Mines as a department of the Board of Trade was introduced. In moving the second reading on *June* 30, Sir Robert Horne said that the Government had come to the conclusion that nationalisation was not wanted, justifiable, expedient, or in the interests of the industry. As to the Bill, he said there was overlapping among the departments which dealt with various phases of the coal industry. The Minister of Mines would be an Under-Secretary of the Board of Trade, and only responsible to the President in matters that really involved large policy. For the regulation of the industry it was proposed to set up a series of pit and district committees or boards and a national board, the country being divided into 26 districts and six areas for this purpose. The area boards would have power to formulate schemes for adjusting the remuneration of the workmen on the basis of the profits of the industry in each area, the national board laying down general principles. The second reading was carried by 217 to 91. The House of Lords, in Committee on *Aug.* 4, made the Minister of Mines only an Under-Secretary of the Board of Trade, and the Commons accepted this amendment, the Bill receiving the Royal Assent on *Aug.* 16, when both Houses adjourned until *Oct.* 19.

THE NEW RENTS ACT.—Further legislation on the subject of rents was contained in a Bill based upon the recommendations of a committee appointed to consider the question. In moving the second reading on *June* 4, Dr. Addison said that it extended for three years the security of tenure of tenants of dwelling-houses obtained under previous statutes, and raised the limits of the rents to which the restrictions applied from £70 to £105 in the metropolitan area, from £60 to £90 in Scotland, and from £52 to £78 elsewhere. It made provision for an increase of rent to meet the increase of mortgage interest. In the case of houses up to £75, the Bill allowed an increase in rent up to 30 per cent—5 per cent. in respect of increased mortgage interest and 25 per cent. in respect of increased cost of repairs; while an increased rent of 40 per cent. was permitted in the case of houses of a rental from £75 to £105, made up of 25 per cent. and 15 per cent. The operation of the increase of rent might be suspended where the house was not reasonably fit for human habitation, or was not in a reasonable state of repair. A fine was imposed for extorting key money. The Standing Committee, by 15 to 12, applied the Bill to business premises on *June* 15 against the Government's wishes, and the measure received the Royal Assent, with this addition, on *July* 2.

HEALTH AND UNEMPLOYMENT INSURANCE.—By a Bill which received the Royal Assent on *May* 20, the State health insurance scheme was amended to meet the after-war conditions. Moving the second reading on *March* 22, Dr. Addison said the sickness benefits would be increased for men from 10*s.* to 15*s.* a week, and for women from 7*s.* 6*d.* to 12*s.*, and the disablement benefit from 5*s.* to 7*s.* 6*d.* for both men and women. Apart from the increased Treasury contribution, this involved an extra payment of 3*d.* per insured person, of which 2*d.* was to come from the employer and 1*d.* from the employee. Maternity benefit was advanced from 30*s.* to 40*s.* Sanatorium benefit was taken out of the Insurance Act altogether, as the first stage in a comprehensive policy of dealing with the whole problem of tuberculosis in respect of all sections of the population The unemployment insurance scheme was also amended by a Bill which raised the number of insured persons to some fifteen millions. Sir Robert Horne, on the second reading on *Feb.* 25, said the workman's contribution would be 3*d.* per week, that of the woman would remain 2½*d.*, and boys and girls would pay 2*d.* and 1½*d.* each. The benefits would be 15*s.* for men, 12*s.* for women, 7*s.* 6*d.* for boys and 6*s.* for girls. The employer would pay 3*d.* a week for each insured person, and the State's contribution would be 2*d.* Several attempts by the Labour Party to prevent friendly societies from participating in the administration of the scheme were defeated.

OTHER SOCIAL LEGISLATION.—Among the other measures which were passed before the recess were Bills to keep the Ministry of Food in existence for a further period, and a Bill to continue in operation for another year and to make more efficacious the Profiteering Act. Another new Bill compelled local authorities to make provision for the training and maintenance of all blind persons, and entitled all blind persons who were unable to work to the Old Age Pension at the age of 50. The Franchise Act of 1918 was amended to the extent of abolishing the delay in the counting of votes at Parliamentary elections, and in its place extending the right of voting by proxy to all absent voters. By the Silver Coinage Act the fineness of the Imperial silver coinage was reduced owing to the greatly increased price of silver bullion. The House of Lords passed a Bill embodying the recommendations of the Royal Commission on Divorce, among them the equality of the sexes in regard to the right to divorce; but the other Chamber did not proceed with it before the adjournment, though it carried on *April* 14 a motion declaring that any change in the law that would impair the permanence of the marriage contract would be harmful to the best interests of the community. Separate measures providing for the taking of the Census in Great Britain and Ireland were also passed, the former being in the nature of a permanent measure, empowering the Minister of Health, by Order in Council, to direct that a census should be taken for Great Britain or any part thereof, and enabling a census every five years instead of every ten years. The Labour Party secured a second reading for a Bill to extend the franchise to women on exactly the same terms as men, the age limit of 30 years being reduced to 21 years, but, owing to the difficulty of obtaining a quorum in the Standing Committee, further progress was abandoned.

ADMIRALTY, Whitehall, S.W. 1.
(*See* "Royal Navy," pp. 275–9.)

MINISTRY OF AGRICULTURE AND FISHERIES, 4–7 Whitehall Place, S.W. 1; 3 St. James's Square, S.W. 1; 43 and 54 Parliament Street, S.W. 1; 72 Victoria Street, S.W. 1.

THE MINISTRY OF AGRICULTURE AND FISHERIES was constituted pursuant to the Ministry of Agriculture and Fisheries Act, 1919 (9 and 10 Geo. V. Ch. 91) which amended the Board of Agriculture and Fisheries Acts, 1889 to 1909. The Board of Agriculture for Great Britain was established in 1889. By the Board of Agriculture and Fisheries Act of 1903, the duties of the Fisheries Department of the Board of Trade were transferred to the Board of Agriculture, the designation of which was at the same time altered. The expression "agriculture" is defined to include "horticulture." The business of the Ministry, so far as it relates to agriculture, is transacted in three Departments, and the heads of Departments, together with the Minister and the Parliamentary Secretary, form the Administrative Council of the Ministry.

The Agricultural Wages Board (80 Pall Mall, S.W. 1) administers the minimum wage provisions of Part II. of the Corn Production Act.

The administration of the *Ordnance Survey* and of *Kew Gardens* is under the control of the Board.

Estimates, 1920–1, £5,294,862.

Minister of Agriculture and Fisheries, Rt. Hon. Lord Lee of Fareham G.B.E., K.C.B. £2,000
Private Secs., A. W. Street, M.C.; A. Balfour.
Parliamentary Secretary and Deputy Minister of Fisheries, Lt.-Col. Sir Arthur Griffith Boscawen, M.P. £1,200
Private Secs., Capt. A. R. Whyte; Miss P. Dereham.
Parliamentary do., Maj. H. Barnston, M.P. .....*unp.*
Chief Scientific Adviser., Sir A. Daniel Hall, K.C.B., F.R.S. £2,200
Private Sec., D. B. Toye, O.B.E.
Secretary, F. L. C. Floud, C.B. £3,000
Private Sec., C. T. Houghton.
Second Secretary and Director-General of Land and Supplies, Sir L. Weaver, K.B.E. £2,200
Private Sec., A. W. Keeble.

The above form the Administrative Council.

Secretariat, Finance and Economic Department.

Permanent Secretary, F. L. C. Floud, C.B.
Assistant Secretary, R. J. Thompson, O.B.E. £1,000 to £1,200
Establishment Officer, G. F. Middleton, M.B.E. £1,000 to £1,200
First Class Clerks, R. H. Hooker; H. H. Judson; A. G. L. Rogers ..... £600 to £800
Establishment Clerk, W. R. Gilbert..... £500 to £700
Principal Finance Officer, G. Macey £850
Deputy Finance Officer, F. J. Langley, M.B.E. £550 to £650
Woman Adviser, Dame Meriel Talbot, D.B.E. £750
Director of Rural Industries, Sir John L. Green, O.B.E. £800

Intelligence Department.

Director General, Sir A. D. Hall, K.C.B., F.R.S.
Assistant Secretaries, H. E. Dale, C.B.; F. B. Shine £1,000 to £1,200
Principal Clerk, A. W. Monro, C.B. £850
First Class Clerks, Major A. S. Gaye; Major Wynn Thomas; C. R. T. Williams, O.B.E. .....£600 to £800
Chief Veterinary Officer and Director of Veterinary Research, Sir S. Stockman, M.R.C.V.S. £1,000 to £1,200
Superintending Veterinary Inspectors, J. R. Jackson; A. H. Berry .....£500 to £700
Controller of Horticulture, W. G. Lobjoit, O.B.E. ....*unp.*
Deputy Controller of Horticulture, H. V. Taylor, M.B.E. £500 to £700
Chief Education Inspector, P. G. Dallinger, O.B.E. £800 to £1,000
Deputy Chief Education Inspector, J. G. Stewart £600 to £800
Director of Plant Diseases, J. C. F. Fryer, M.A. £700 to £900
Dairy Commissioner, J. F. Blackshaw, O.B.E. £700 to £900
Live Stock Commissioner, F. N. Webb £850
Superintending Live Stock Officers, G. S. Dixon; R. N. Jones. .....£500 to £700
Superintending Inspectors, F. A. Fulford; F. S. Lawrie £800; F. W. Carter; W. S. Douglas; C. T. A. Robertson .....£500 to £700
Senior Inspectors, A. B. Bruce, M.A.; F. A. Francis; T. Close; A. V. Campbell; E. T. Halnan; G. P. Berry .....£500 to £700

Land and Supplies Department.

Director General, Sir L. Weaver, K.B.E.
Assistant Secretaries, H. L. French, C.B., O.B.E.; A. T. A. Dobson ..... £1,000 to £1,200
First Class Clerks, E. L. Mitchell; P. W. Millard; C. W. Sabin; H. D. Vigor, M.B.E.; H. G. Richardson; H. R. Ward; R. R. Enfield ..... £600 to £800
Director of Land Acquisition S. Mager, C.B.E. £1,100
Principal Valuer, W. T. Howes £800
Inspecting Commissioner, F. E. N. Rogers £800
District Commissioners, J. H. Diggle; E. O. Fordham; D. C. Barnard; A. Allsebrook; F. Horne, O.B.E. £800
District Commissioners (temporary), T. Balfour; E. L. Banham; C. J. Cawood; B. Clayhills; T. Griffith; R. W. Hawke; R. Jackson; D. Quirk; F. J. Richards; C. M. Roberts; J. Roberts; A. G. Smith; D. Turner .....
Headquarters Commissioner, H. V. Raffety (*lent from Inland Revenue Department*).
Estates Management Commissioner, T. J. Young £900
Chief Drainage Engineer, C. H. J. Clayton, M.B.E. £600 to £800
Superintending Inspectors, E. G. Haygarth Brown, £500 to £700; Major A. T. Moore (*tempy.*)..... £700

Fisheries Department.

Fisheries Secretary, H. G. Maurice, C.B.
First Class Clerks, Maj. E. Garnsey; C. Natham £600 to £800
Director of Scientific Fishery Investigations, Prof. Stanley Gardiner (*tempy.*) £1,200
Technical Adviser on Inshore Fisheries, H. Lyster Jameson, D.SC. £1,000
Chief Inspector of Fisheries, H. S. Moss Blundel (*tempy.*) £1,000
Chief Bacteriologist, R. W. Dodgson, M.D. (*tempy.*) £825
Superintending Naturalist Inspector, J. O. Borley, O.B.E., M.A. .....£500 to £700
Chief Insurance Officer, J. Thomson .....£550 to £600
Hydrographer, E. C. Jee, D.SC. .....£400 to 500

Welsh Office.

Welsh Secretary, C. Bryner Jones, C.B.E. £1,000 to £1,200
First Class Clerk, G. W. Sneyd-Lloyd, L.S.O., O.B.E. £600 to £800
Supervising Commissioner for Wales, J. Owen, O.B.E. £1,000

Legal Branch.

Legal Adviser, F. A. Jones, C.B. .....£1,200 to £1,500
Assistant Legal Adviser, A. D. Stocks, O.B.E. £800 to £1,000

Royal Botanic Gardens, Kew. (£38,939.)

Head Office.

Director, Lt.-Col. Sir D. Prain, C.M.G., C.I.E., M.B., F.R.S. £1,000
Assistant Director, A. W. Hill, SC.D., F.R.S. £500 to £700
1st Class Assistant, J. Aikman .....£300 to £500

Executive Office.

Curator of Gardens, W. Watson, A.L.S. ...£300 to £500
Assist. do., W. J. Bean .....£300 to £500
1st Class Assistant, W. N. Winn .....£300 to £500

Herbarium and Library.

Keeper, Dr. O. Stapf, F.R.S. .....£500 to £600
1st Class Assistants, R. A. Rolfe, A.L.S.; C. H. Wright, A.L.S.; S. A. Skan; T. A. Sprague, F.L.S. £300 to £500

Museums.

Keeper, J. M. Hillier .....£300 to £500
1st Class Assistant, J. H. Holland, F.L.S. £300 to £500

Jodrell Laboratory.

Assistant Keeper, L. A. Boodle, F.L.S. ...£300 to £500

Ordnance Survey Department, Southampton.

Director-General, Col. Sir Charles F. Close, K.B.E., C.B., C.M.G., F.R.S.

AIR MINISTRY (*see* pp. 285-6).

COLLEGE OF ARMS or HERALDS' COLLEGE,

Queen Victoria Street, E.C. 4.

(*See also* Scottish and Irish Sections.)

The Heralds' College was incorporated and endowed by Richard III. in 1484, as a College of Arms, presided over by the Earl Marshal, the other members being the then Kings of Arms, and the six Heralds, to regulate the granting and the bearing of Coat Armour, in addition to the ordinary functions of the Heralds. Their first residence was in Pulteney's Inn until the present site was granted by Queen Mary in 1554, the house being rebuilt as it now stands after destruction in the Great Fire.

Earl Marshal, His Grace the Duke of Norfolk.
Deputy Earl Marshal, Rt. Hon. Lord Edmund Bernard Talbot, G.C.V.O., D.S.O., M.P.

KINGS OF ARMS.

Garter, Sir Henry Farnham Burke, K.C.V.O., C.B., F.S.A.
Clarenceux, Charles Harold Athill, M.V.O., F.S.A.
Norroy, William Alexander Lindsay, K.C., F.S.A.

SIX HERALDS.

Lancaster, Edward Bellasis.
York, Gordon Ambrose de Lisle Lee, C.B.
Somerset, Everard Green, F.S.A.
Chester, Arthur William Steuart Cochrane, M.V.O.
Richmond, Gerald Woods Wollaston, M.V.O.
Windsor, Algar Henry Stafford Howard, M.C.

FOUR PURSUIVANTS.

Portcullis, Keith William Murray, F.S.A.
Rouge Croix, Archibald George Blomefield Russell.
Bluemantle, Hon. Philip Plantagenet Cary.
Rouge Dragon, Alexander W. Dury Mitton.
Earl Marshal's Sec., Gordon A. de Lisle Lee, C.B.
Registrar, Arthur W. S. Cochrane, M.V.O.

CABINET SECRETARIAT.

2 Whitehall Gardens, S.W. 1.

Secretary, Lt.-Col. Sir M. P. A. Hankey, G.C.B.
Private Sec., A. J. Sylvester, O.B.E.
Principal Assistant Secretary, T. Jones, O.B.E.
Assistant Secretaries, Cyril Longhurst, C.B.; R. B. Howorth (*Treasury Liason Officer*).
Principals, T. St. Q. Hill; Pembroke Wilks (*temp.*).
Assistant Principal, A. J. Sylvester, C.B.E.
Confidential Head Clerk, W. H. M. Ives, O.B.E.
Asst. do., P. W. Sandwell, M.B.E.

Committee of Imperial Defence.

2, Whitehall Gardens, S.W. 1.

Secretary, Lt.-Col. Sir M. P. A. Hankey, G.C.B.
Principal Assistant Sec., Brig.-Gen. S. H. Wilson, C.B., C.M.G.
Assistant Secs., C. Longhurst, C.B.; Lt.-Col. L. Storr, C.B.; Comm. R. L. Hamer, R.N.
Principal, Capt. L. F. Burgis (*temp.*).
Confidential and Chief Clerk, W. H. M. Ives, O.B.E.
Asst. Chief Clerk, F. W. Rawlins, M.B.E.

Historical Section.

Secretary, Lt.-Col. E. Y. Daniel, C.B.E.

CENTRAL CONTROL BOARD.

(Liquor Traffic.) (£316,350.)

Latymer House, 134 Piccadilly, W. 1.

Board, W. Waters Butler; Rev. Henry Carter; H. H. Dale, C.B.E., M.D., F.R.S.; Col. J. M. Denny, C.B.; Hon. Hugh Godley; Rt. Hon. Lord Leverhulme; R. S. Meiklejohn, C.B.; S. O. Nevile; Sir John Pedder, K.B.E., C.B.; Rt. Hon. J. H. Thomas, P.C., M.P.; Sir W. Towle; W. Thorne, M.P.
Secretary, Sir J. C. G. Sykes, K.C.B.
Private Sec., S. W. Grose.
Assist. do., J. B. Lincoln, O.B.E.
Chief Clerk and Accountant, A. E. Mitchell, O.B.E.

CHARITY COMMISSIONERS,

Ryder Street, St. James's, S.W. 1.

The Charity Commission was appointed by Act of Parliament in 1853 for the better administration of Charitable Trusts in England and Wales." In 1874 the powers previously exercised by the Endowed Schools Commissioners were temporarily transferred to the Charity Commission, and in 1879 the transfer was made permanent. The powers of the Commissioners over all endowments held for purely Educational purposes have now been transferred to the Board of Education in pursuance of Orders in Council made under the Board of Education Act, 1899. The salaries, &c., amounted in 1919-20 to £36,619.

Chief Commissioner, Herbert Picton Morris, LL.B. £1,500
Private Sec., F. B. Jackson.
Second Commissioner, J. F. Mills ..... £1,000 to £1,200
Secretary, G. C. Bower.
Parliamentary Commissioner (vacant).
Assist. Commissioners and Principal Clerks, G. W. Wallace; A. C. Kay, O.B.E.; J. E. C. Adams; C. F. Ritchie; E. Macpherson; H. D. S. Leake; W. F. Fox..... £650 to £900
Accountant, Off. Trustees' Dept., J. J. B. Petherbridge £550 to £700
Assist. do., C. T. Radcliffe ..... £300 to £450
1st Class Clerks, G. B. Rooke; A. E. McLaren, O.B.E.; R. E. Ford; C. N. Hope-Wallace, M.B.E.; F. B. Jackson ..... £450 to £600
Clerk of Registration and Muniments, A. L. Guest.
Senior Staff Clerk in Official Trustee's Department, F. H. Lewis.
Assistant Draughtsman, S. E. Turner.
Librarian and Clk. to Sec., H. B. Denham.
Clerk in charge of Accounts of Charities, (vacant).
Staff Clerks, S. Hart; A. S. Hanbury; J. R. Smith £300 to £400

CIVIL SERVICE ARBITRATION BOARD,

Sanctuary Buildings, Great Smith Street, S.W. 1.

Appointed by H.M. Government at the beginning of 1917 as a standing tribunal "to deal by way of conciliation or arbitration with questions arising with regard to claims for increased remuneration made by classes of employees of Government Departments."

Members, C. A. Russell, K.C.; Sir W. Guy Granet; Harry Gosling, C.H.
Secretary, M. Heseltine, C.B. £1,200

CIVIL SERVICE COMMISSION,

Burlington Gardens, W. 1.

The Civil Service Commission was established in 1855 to apply tests of fitness for junior situations in all branches of the Civil Service. In 1870 an Order in Council applied the system of competitive examination throughout the Service. The examinations are open to all persons of the requisite age, health, and character, subject to certain restrictions. No person is eligible who is not a natural-born British subject and the child of a father also a natural-born British subject. Establishment Expenses, 1919-1920, £56,059.

1st Commissioner, Sir Stanley M. Leathes, K.C.B. £1,500
Assist. Commr. and Dir. of Exams., D. B. Mair £1,000
Assist. Commr. and Sec., L. C. H. Weekes £1,000
Assist. Sec., G. G. Mennell ..... £700 to £750
Senior Clerks, J. H. Brackenberry; T. L. Hedley £500 to £700

COLONIAL OFFICE, Downing Street, S.W. 1.

The business of the Colonies was, until 1801, included in the functions of the Home Secretary, to be transferred in that year to the newly-created "Secretary for War." In 1854 the outbreak of the Russian War led to the appointment of a Secretary of State for the Colonies (to relieve the War Secretary of Colonial business). The Colonial Secretary possesses an advisory power of veto on legislation of the self-governing Dominions, and is responsible for the government of the remaining Dominions beyond the Seas in inverse proportion to the amount of self-government granted to them. The salaries, &c., of the Colonial Office are estimated at £108,598 for 1920-1921.

Principal Secretary of State for the Colonies, Rt. Hon. Viscount Milner, G.C.B., G.C.M.G. £5,000
Private Sec., A. C. C. Parkinson, O.B.E.
Assist. Priv. Secs., Maj. R. D. Furse, D.S.O. (Appointments); J. E. Stephenson.

UNDER-SECRETARIES.

Permanent, Sir George V. Fiddes, G.C.M.G., K.C.B. £3,000
Private Secretary, L. B. Freeston.
Parliamentary, Lt.-Col. L. C. M. S. Amery, M.P. £1,500
Private Secretary, A. J. Dawe.
Asst. Under-Secs., Sir H. J. Read, K.C.M.G., C.B., £2,200 ; Sir Henry Lambert, K.C.M.G., C.B. ; G. E. A. Grindle, C.B., C.M.G. ..... £1,200 to £1,500
Legal Adviser, John Shuckburgh Risley, C.B. ..... £1,200 to £1,500
Assistant Secretaries, C. Strachey, C.B. ; A. E. Collins, C.M.G. ; W. D. Ellis, C.M.G. ; J. F. N. Green; C. T. Davis, C.M.G. ; T. C. Macnaughten, C.B.E. ; A. Fiddian ; W. C. Bottomley, O.B.E. ; E. R. Darnley ; A. J. Harding, O.B.E. ; H. R. Cowell ..... £1,000 to £1,200
Legal Assistant, H. G. Bushe..... £900 to £1,000
Principals, E. H. Marsh, C.M.G. ; E. J. Harding, C.M.G. ; H. F. Batterbee, C.M.G., C.V.O. ; A. C. C. Parkinson, O.B.E. ; J. E. W. Flood ; O. G. R. Williams ; R. A. Wiseman ; C. W. Dixon, M.B.E. ; H. N. Tait ; E. G. S. Machtig, M.B.E. ; J. A. Calder ; H. F. Downie ; H. Becket ; H. T. Allen ; G. L. M. Clauson, O.B.E. ; G. A. Jones ; C. J. Jeffries ..... £700 to £900
Assistant Principals, A. J. Dawe ; L. B. Freeston ; J. E. Stephenson ; S. M. Campbell ; E. B. Boyd ; W. C. Hankinson ; A. B. Acheson ; P. Liesching ; E. A. Simson ; G. E. J. Gent ; G. H. Creasy ..... £200 to £500
Accountant, W. H. Eggett, I.S.O. ..... £500 to £600
Librarian, C. H. Niblett, I.S.O. ..... £500 to £600
Chief Registrar, W. F. Westbrook ..... £300 to £500
Supt. of Printing, T. Wilson ..... £300 to £450
Clerk for Legal Instruments, W. Scott ... £300 to £450
Staff Clerks (*First Grade*), W. E. Hobson, M.B.E. ; J. A. Smith, M.B.E. ; C. M. Hatcher ; S. R. Pughe ; E. H. Howell ..... £300 to £400
Medical Advisers: London—Sir J. Rose Bradford, K.C.M.G., C.B., C.B.E., M.D., F.R.S. ; Lt.-Col. W. T. Prout, C.M.G., M.B., *late* R.A.M.C.
Liverpool—R. H. Kennan, M.D., M.ch., F.R.C.S.I.
Edinburgh—Brigade Surgeon Lt.-Col. J. Arnott, M.D., I.M.S. (retd.).
Dublin—Sir J. Hawtrey Benson, M.D., F.R.C.P.I.

Colonial Audit Department,
58 Victoria Street, S.W. 1.

The Accounts of certain Colonies and Protectorates are audited on behalf of the Secretary of State for the Colonies. The cost of this audit is borne by the Colonies and Protectorates affected.

Director, A. E. Stephenson, C.M.G. £1,200
Senior Clerks, H. D. Fisher ; J. C. Fisher, O.B.E. ..... £450 to £600
Junior Clerks, W. H. Smith ; J. B. Hewlett ; C. E. Dale, C.M.G., C.B.E. (*temp.*) ..... £200 to £400

Oversea Settlement Committee
(late Government Emigration Committee),
59 Victoria Street, S.W.1.—(10 to 5. Sat. 10 to 1.30.)

H.M. Government have found it necessary to undertake closer responsibility in connexion with the movements of British subjects wishing to settle overseas within the Empire, or to emigrate to foreign countries, than they have exercised in the past. In order to assist them in carrying out their policy they appointed a Committee at first known as "The Government Emigration Committee," now renamed "The Oversea Settlement Committee."

President, Committee of Management, The Secretary of State for the Colonies.
Chairman, The Parliamentary Under-Secretary of State for the Colonies.
Vice-Chairman, do., T. C. Macnaghten, C.B.E.
Secretary, G. F. Plant.

Imperial Institute,
South Kensington, S.W. 7.

The Imperial Institute was erected as a memorial of the Jubilee of Queen Victoria (*see* page 489), and by the Imperial Institute (Management) Act of 1916 is under the management of the Secretary of State for the Colonies, assisted by an Executive Council composed of twenty-five members. The principal work of the Imperial Institute is the promotion of inter-imperial trade in raw materials, by investigations with a view to utilisation, by supplying information as to sources, quality and uses, and by exhibitions illustrative of the resources of the Empire.

Executive Council, Rt. Hon. Lord Islington, G.C.M.G., D.S.O. (*Chairman*) ; Rt. Hon. Viscount Burnham, C.H. ; Rt. Hon. Lord Emmott, G.C.M.G., G.B.E. ; Pro f. Wyndham R. Dunstan, C.M.G., F.R.S. ; A. Fiddian ; Sir Algernon Firth, Bt. ; G. E. A. Grindle, C.B., C.M.G. ; Sir Robert Kindersley, C.B.E. ; D. O. Malcolm ; Sir Owen Philipps, G.C.M.G., M.P. ; Sir William Taylor, K.C.M.G. ; Sir Richard Threlfall, K.B.E., F.R.S. ; P. W. L. Ashley, C.B. ; R. W. Matthew ; Sir J. P. Hewett, G.C.S.I., K.B.E., C.I.E. ; L. J. Kershaw, C.S.I., C.I.E. ; Sir A. D. Hall, K.C.B., F.R.S. ; Sir R. W. Carlyle, K.C.S.I., C.I.E. ; Hon. Sir George H. Perley, K.C.M.G. ; Rt. Hon. Andrew Fisher ; Sir Reginald Blankenberg, K.B.E. ; Hon Sir James Allen, K.C.B. ; Hon. Sir Edgar Bowring ; Sir Edward W. Davson.

The following are the principal Committees of the Institute :—

Committee for Canada.

Hon. Sir George Perley, K.C.M.G. (*Chairman*) ; J. G. Colmer, C.M.G. ; Sir Robert Kindersley, G.B.E. ; J. H. Plummer ; Sir Keith Price.

Committee for Australia.

Rt. Hon. Andrew Fisher (*Chairman*) ; Sir Gordon Campbell, K.B.E. ; Capt. Sir R. Muirhead Collins, R.N., C.M.G. ; E. V. Reid.

Committee for New Zealand.

W. Acton Adams ; J. Coates ; R. D. D. McLean ; Alexander Michie ; Sir James Mills, K.B.E. ; R. H. Nolan, C.B.E.

Committee for South Africa (*including Rhodesia*).

BOARD OF CUSTOMS AND EXCISE,
Lower Thames Street, E.C. 3.

Commissioners of Customs were first appointed in 1671 and housed by the King in London, the present "Long Room" replacing that built by Charles II. and rebuilt after destruction by fire in 1718 and 1814. In 1830 the Customs business of Ireland was transferred to London. The Excise Department was formerly under the Inland Revenue Department, and was amalgamated with the Customs Department on 1 April, 1909. Salaries and expenses of the Department amounted to £4,091,664 in 1919-20.

Chairman, Horace P. Hamilton, C.B. £3,000

BOARD OF EDUCATION,
Whitehall, London, S.W. 1.

The Government Department of Education was, until the establishment of a separate office, a Committee of the Privy Council appointed in 1839 to supervise the distribution of certain grants which had been made by Parliament since 1834. The Act of 1899 established the Board of Education, with a President and Parliamentary Secretary, and created a Consultative Committee. The cost of administration was estimated at £376,148 in 1920-21, with £301,450 for Inspection and Examination.

EMIGRANTS INFORMATION OFFICE

(*see* Colonial Office, p. 237).

EXCHEQUER AND AUDIT DEPARTMENT,

Victoria Embankment, E.C. 4.

The Comptroller and Auditor-General was appointed by Letters Patent under 29 & 30 Vict. c. 39 § 3 (1866), in place of the Comptroller-General of the Exchequer and the Commissioners for Auditing the Public Accounts, whose duties were handed over to him. The main functions of the office are: (1) Exchequer:—To authorise Issues from the Exchequer, not exceeding the amounts sanctioned by Parliament; to authorise borrowings in case of deficiency; to examine the daily Exchequer accounts of the Banks of England and Ireland, and the accounts of the Consolidated Fund. (2) Audit of Public Accounts:—To ascertain that money expended has been applied to the purpose for which the grant of Parliament was intended to provide; that the expenditure is supported by proof of payment, and generally to verify the correctness of the Accounts and to report to Parliament thereon. The net expenses of the Department were estimated at £137,400 in 1920-21.

Compt. and Aud.-Gen., Sir Hy. Jas. Gibson, K.C.B. £3,000

FOREIGN OFFICE, Downing Street, S.W. 1.

The Secretaryship of State for Foreign Affairs was created in 1782, superseding the ancient Secretary for the Northern Department of Europe (as the Officer had been called since 1668). He is assisted by two Under-Secretaries (one Parliamentary, the other Permanent), two Assistant Under-Secretaries, eight Assistant Secretaries, a Legal Adviser, a Librarian, and a staff of Clerks. The chief functions, in addition to the formal duties, are receiving and answering communications from individuals or other Government Departments, from Diplomatic and Consular Agents of this country or others, and in determining the policy of the country towards Foreign Powers. The administrative expenses of the Foreign Office were estimated at £201,052 in 1920-21.

Asst. do., James W. Stafford, M.B.E.
Establishment Officer & Accountant, Leslie G. Brown.

FORESTRY COMMISSION.

22 Grosvenor Gardens, S.W. 1.

The Forestry Commissioners were appointed under the Forestry Act (1919), and were created a Body Corporate in April 1920. The Commissioners are charged with the general duty of promoting the interests of forestry, the development of afforestation and the production and supply of timber in the United Kingdom. The act transferred to the Commissioners the powers and duties of the Board of Agriculture and Fisheries, the Board of Agriculture for Scotland, and the Department of Agriculture and Technical Instruction for Ireland in relation to forestry, and also the powers of those Departments under the Destructive Insects and Pests Acts, 1877 and 1907, so far as those powers relate to insects or pests destructive only to forest trees and timber.

The net estimated expenditure on forestry operations, &c., for the year 1920-21 is £379,000.
Chairman, Maj.-Gen. Lord Lovat, K.T., K.C.M.G., K.C.V.O., C.B., D.S.O.
Commissioners, Right Hon. F. Dyke Acland, M.P.; Rt. Hon. Lord Clinton; L. Forestier-Walker, M.P.; T. B. Ponsonby, D.L.; R. L. Robinson, O.B.E.; Col. W. Steuart-Fothringham; Sir J. Stirling-Maxwell, Bart.
Assistant Commissioners, Hugh Murray, C.I.E., C.B.E. (*England and Wales*); John Sutherland, C.B.E. (*Scotland*); A. C. Forbes, O.B.E. (*Ireland*).
Secretary, A. G. Herbert.

FRIENDLY SOCIETIES' REGISTRY,

17, North Audley Street, W. 1.

A Barrister was appointed in 1828 to certify the Rules of Savings Banks, and in 1829 to certify those of Friendly Societies. In 1846 he was constituted Registrar of Friendly Societies. By the Friendly Societies Act, 1875, the Central Office of the Registry of Friendly Societies was created, consisting of Chief Registrar and the Assistant Registrars for England. It exercises numerous and important functions under the Friendly Societies Act, the Industrial and Provident Societies Acts, the Building Societies Acts, the Trade Union Acts, the Workmen's Compensation Acts, the Scientific Societies Act, the Trustee Savings Banks and Post Office Savings Banks Acts, the Loan Societies Act, the Shop

Clubs Act, and a great number of local and personal Acts. Establishment expenses, 1920 21, £41,810.
Chief Registrar, G. Stuart Robertson, K.C. £1,200 to £1,500
Private Sec., G. H. Cooper.
Assist. Registrars, G. D. Barlow; John Fox, O.B.E.; D. L. F. Koe ..... £850 to £1,000
Head of Legal Branch, H. P. Harker ..... £500 to £700
Head of Returns and Statistics Branch, H. C. Souter £550 to £700
Head of Rules, &c. Branch, G. T. Knecht £500 to £600
Head of Registers, &c., Branch, T. F. Dunning £500 to £600

FUEL RESEARCH STATION,
East Greenwich, S.E. 10.

In February, 1917, the Committee of the Privy Council for Scientific and Industrial Research appointed the Fuel Research Board to investigate the nature, preparation, and utilisation of fuel of all kinds, both in the laboratory and, where necessary, on an industrial scale. The Research Station at East Greenwich (erected in 1918–19) is designed and equipped to give effect to the Board's scheme of research.

Director, Sir George Beilby, F.R.S., 16-18 Old Queen Street, S.W. 1.
Chief Engineer, Eng.-Comm. J. Fraser Shaw, R.N.

GEOLOGICAL SURVEY OF GREAT BRITAIN and Museum of Practical Survey,
Jermyn Street, S.W. 1.

The Geological Survey and Museum was commenced in 1832; it was under the Science and Art Department from 1853 till 1900, when that Department became merged in the Board of Education. On Nov. 1, 1919, the administrative control of the Survey and Museum was transferred to the Committee of the Privy Council for Scientific and Industrial Research. The normal work of the Survey includes the preparation of geological maps and memoirs dealing with the general survey of the country, and with various economic aspects of that survey. The Museum of Practical Geology conserves and exhibits rocks, minerals and fossils which afford evidence for the published records of the survey or illustrate that survey. It is also a function of the Museum to exhibit economic minerals from all parts of the world.

Director of Survey and Museum, J. S. Flett, D.SC., LL.D., F.R.S. £1,200
Assistants to Director, J. A. Howe, O.B.E., B.SC.; W. Gibson, D.SC. ..... £700 to £800

Petrographer, H. H. Thomas, SC.D. ..... £520 to £650
Geologists, E. M. Anderson, B.SC.; C. E. N. Bromehead; G. A. Burnett; C. Hawker Dinham; E. E. L. Dixon; T. Eastwood; D. Haldane; G. W. Lee, D.SC.; R. W. Pocock; H. H. Read, B.SC.; J. E. Richey; T. Robertson; R. L. Sherlock, D.SC.; C. B. Wedd; T. H. Whitehead; G. V. Wilson, B.SC.; D. A. Wray £150 to £500
Assistant Palæontologists, C. P. Chatwin; J. Pringle £150 to £500

Museum.

Curator and Librarian, (vacant) ..... £520 to £650
Asst. Curator, A. F. Hallimond ..... £150 to £500
Assist. Librarian, C. V. Crook ..... £150 to £500

MINISTRY OF HEALTH,
Whitehall, S.W. 1.

This Department was established by the Ministry of Health Act, 1919, to exercise in England and Wales powers with respect to Health and Local Government, and to it were transferred by the Act, subject to certain provisos (a) all the powers and duties of the *Local Government Board*, the *Insurance Commission* and the *Welsh Insurance Commission*; (b) the powers of the *Board of Education* relating to the health of expectant and nursing mothers and children under five, and to the medical inspection and treatment of children and young persons; (c) all the powers of the *Privy Council* and of the Lord President of the Council under the Midwives Acts, 1902 and 1918, and the powers hitherto exercised by the Secretary of State under Part I of the Children Act, 1908. There may also be transferred to the Minister certain specified powers and any other powers and duties in England and Wales of any Government Department which appear to relate to matters affecting or incidental to the health of the people.

Deputies, Sir W. S. Kinnear, K.B.E.; Sir J. Leishman; Sir J. Glynn; Sir T. Hughes.

REGISTRAR-GENERAL'S OFFICE (ENGLAND AND WALES), Somerset House, W.C. 2.

The Registration of Births, Marriages, and Deaths is believed to have been inaugurated by Thomas Cromwell in 1522, but the Statutes concerning registration are of a comparatively modern date, and were consolidated by 37 & 38 Vict. c. 88. The first Registrar-General was appointed in 1836, his work being enormously increased by the Act of 1874, which made registration compulsory in England and Wales. The expenses of the Office for 1919-20 were estimated at £66,459 (Registry of Business Names, £1,815).
Registrar-General, Sir Bernard Mallet, K.C.B. ...£1,200
Private Sec., G. H. Tregear, B.SC.
Deputy Registrar-General, S. P. Vivian ..... *unp.*

Principal Clerks, T. T. S. de Jastrzebski; W. L. Rind £700

Registry of Business Names, 39 Russell Square, W.C. 1.

Registrar, Sir Bernard Mallet, K.C.B.
Asst. do., T. T. S. de Jastrzebski.

HOME OFFICE, Whitehall, S.W. 1.

The Secretaryship of State for Home Affairs was created in 1782, the duties having previously been assigned to the "Southern" Secretaryship, which embraced the affairs of Great Britain, Ireland, and the Colonies, and also Southern Europe. By the appointment of the "Home" and "Foreign" Secretaries the duties were divided in accordance with the names of the Offices, the former retaining Irish and Colonial business, and until 1794 War business also. In 1801 the Colonial business was also removed. The Home Secretary is the medium by which the Sovereign acquaints his people of his pleasure, and a channel of communication with the Sovereign, and his main functions are the maintenance of the King's peace, the enforcement of rules made for the internal well-being of the community, and the exercise of the prerogative of mercy. The administrative expenses of the Home Office were estimated at £352,058 in 1919-20.
Principal Secretary of State for Home Affairs, Rt. Hon. Edward Shortt, K.C., M.P. £5,000
Private Sec., A. Maxwell.

BOARD OF INLAND REVENUE,

Somerset House, W.C. 2.

The appointment of Commissioners of Stamps dates from 1694 and of Commissioners of Taxes from 1729. By 4 and 5 Will. IV. c. 60, a consolidated Board of Stamps and Taxes was established, and by 22 and 23 Vict. c. 21 this Board was amalgamated with the Commissioners of Excise to form the Board of Inland Revenue. By 8 Edw. VII., c. 16 the administration of Excise was transferred to the Board of Customs. The present sources of "Inland Revenue" consist of Death Duties, Stamps, Taxes, and Land Value Duties. Salaries and Expenses of the Board amounted in 1919–20 to £4,445,380.

Secretary, Capt. Sir Thomas Butler, K.C.V.O. £200
Clerk, Capt. E. H. L. Elliott £100
Resident Supt. House of Lords, T. Whitehead £300

* Temporary or Acting Appointment,

METROPOLITAN ASYLUMS BOARD.

Office: Victoria Embankment, E.C. 4.

Constituted under Orders of the Ministry of Health to provide, for the Metropolis, hospital accommodation for infectious disease, both acute and convalescent, for ophthalmia neonatorum and venereal disease, hospital accommodation for certain classes of sick children, and institutions for mental defectives. Also to provide training ships, an ambulance service, land and river, sanatoria and hospitals for tuberculous patients, accommodation for sane epileptics, and casual wards. Particulars of fever hospitals are given on p. 349, of mental hospitals and training colonies on p. 350.

The Board consists of 73 members, 55 being elected by the several metropolitan boards of guardians and 18 nominated by the Ministry of Health.

Chairman of Board, The Very Rev. Canon Sprankling.
Vice-Chairman, Thomas Cornell.
Clerk to the Board, Sir Duncombe Mann.
Deputy Clerk, G. A. Powell, C.B.E.
Treasurer and Accountant, Morris Heyes, A.C.A.
Deputy ditto, H. J. K. Wharrie.

Controller of Supplies, G. J. Cooke.
Engineer-in-Chief, T. Cooper, M.I.C.E., Sheffield House, Sheffield Street, W.C. 2.

THE ROYAL MINT, Tower Hill, E. 1.

The Royal Mint, as now constituted, may be said to date from 1817, and the buildings from 1810, the latter being completed in that year at the cost of over £250,000. In 1870 the Coinage Act abolished the ancient post of Master of the Mint as such, and combined it with that of the Chancellor of the Exchequer. The first known Master (or Warden) of the Mint dates from Henry I. and the last Warden was Lord Maryborough (1814–23), the last Master being Professor Thomas Graham, who died in 1869. The estimated administrative expenses amount to £216,410 for 1920–1921. Appropriations in aid, £216,400, leaving a net cost of £10.

Master and Worker, The Chancellor of the Exchequer.

Do., C. F. Barrett ..... £300 to £400
Superintendent, Operative Department, W. J. Hocking, C.B.E. ..... £700 to £900
Assistant do., W. J. Drown; D. G. Spittle; H. W. L. Evans, O.B.E. ..... £360 to £500
Chemist and Assayer, Sir T. K. Rose, D.Sc. £700 to £900
Assistant Assayers, S. W. Smith, D.Sc., £350 to £600; J. Phelps, M.A., £350 to £550; W. A. C. Newman, B.Sc. ..... £300 to £550
Curator and Librarian, W. J. Hocking, C.B.E. (*addl.*) £50

Branches of the Royal Mint.

Sydney, New South Wales.

Deputy Master, E. H. S. von Arnheim, I.S.O. ... £1,100
Superintendent, J. H. Campbell ..... £700 to £900

Melbourne, Victoria.

Deputy Master, M. L. Bagge £1,100
Superintendent, A. M. Le Souëf ..... £800 to £900

Perth, Western Australia.

Deputy Master, J. F. Campbell £1,100
Superintendent, F. E. Allum ..... £700 to £800

Ottawa, Canada.

Deputy Master, A. H. W. Cleave ..... £1,000 to £1,200
Superintendent, J. Roe ..... £750 to £1,000

MINISTRY OF MUNITIONS.

Caxton House, West Westminster, S.W. 1.

Minister of Munitions, Rt. Hon. Lord Inverforth £5,000
Personal Assistant, Sir James Currie, K.C.B. (*unp.*)
Private Secretary, E. H. Davies, O.B.E.
Parliamentary and Financial Secretary, James F. Hope, M.P. £1,200
Private Secretary, F. R. Ley.
Parliamentary do., W. J. U. Woolcock, C.B.E., M.P. (*unp.*)
Additional Parliamentary Sec., Lord Rathcreedan.
Joint Secretaries, Sir Sigismund Dannreuther, C.B.; D. Neylan, C.B.E.
Assistant Secretary, T. W. Smith, C.B.E.

Surplus Government Property Disposal Board.

President, The Minister of Munitions.
Chairman, Sir Howard Frank, K.C.B.
Deputy Chairman, Sir William Ellis, C.B.E.
Members, C. C. Barrie, C.B.E., M.P.; Sir Robert Connell, K.B.E.; Lt.-Col. R. L. Corbett, C.B.E.; David Currie, C.B.; Sir Phillip Dawson; B. Ellinger; Major-Gen. Rt. Hon. Sir L. B. Friend, K.B.E., C.B.; Sir Sydney Henn, K.B.E.; W. J. Larke, C.B.E.; Brig.-Gen. Sir H. P. Maybury, K.C.M.G., C.B.; D. Neylan, C.B.E.; Sir L. Byron Peters, K.B.E.
Secretary, H. Claughton, O.B.E.

THE BRITISH MUSEUM,

Bloomsbury, W.C. 1.

The British Museum may be said to date from 1753, when Parliament granted the sum of £20,000 to purchase the collection of books, &c., of Sir Hans Sloane, the building (Montagu House) being opened in 1759. The present buildings were erected between 1823 and 1857, and the original collection has increased to its present dimensions by gifts and purchases, and by the operation of the Copyright Acts. Rules, &c., affecting the public, dates and times of opening, &c., will be found among "Places of Interest." The administrative expenses of the British Museum were estimated at £394,233 (including Natural History Museum) in 1920–21, and were met by a vote under "Education, Science, and Art." Class IV. of the Civil Service Estimates.

Director and Principal Librarian, Sir Frederic George Kenyon, K.C.B., F.B.A., Litt.D. £1,500
Assistant Secretary, A. R. Dryhurst, I.S.O. £600 to £700
Clerk in Charge of Accounts, C. P. Cooke £400 to £500
Assistant, 1st Class, E. B. Nicholson, B.A. £300 to £500
Minor Staff Officers, J. Knowles; J. F. Isaac £300 to £400
Keeper of Printed Books, Alfred William Pollard, M.A. £700 to £800
Assistant Keepers, Robert F. Sharp, B.A.; F. D. Sladen, B.A. ..... £520 to £650
Superintendent of Reading Room, F. D. Sladen, B.A.
Assistants, 1st Class, J. A. J. de Villiers; L. H. E. Taylor; H. Symons, B.A.; P. Wilson, M.A.; W. A. Marsden, M.A.; L. C. Wharton, B.A.; G. D. R. Tucker, M.A.; H. Thomas, Litt.D.; A. J. K. Esdaile, B.A.; J. V. Scholderer, M.A.; F. C. W. Hiley, M.A.; A. F. Johnson, B.A.; A. I. Ellis, M.A.; F. P. Sprent, M.A.; E. W. F. Lynam, B.A. ..... £300 to £500
Assistants, 2nd Class, M. R. Dobie, B.A.; A. G. Macfarlane, B.A.; F. G. Rendall, B.A.; W. A. Smith, M.A.; H. Sellers, M.A.; L. A. Sheppard, B.A.; C. B. Oldman, B.A.; N. O. M. Cameron, B.A. £150 to £300
Keeper of Manuscripts and Egerton Librarian, J. P. Gilson, M.A. ..... £700 to £800
Assistant Keeper of MSS., J. A. Herbert, B.A. £520 to £650
Assistants, 1st Class, A. Hughes-Hughes; D. T. Baird Wood, M.A.; H. Idris Bell, M.A.; R. E. W. Flower, B.A.; G. T. Hales, M.A. ..... £300 to £500
Assistants, 2nd Class, H. J. M. Milne, B.A.; E. G. Millar, B.A.; A. J. Collins, B.A.; R. A. Coates £150 to £300
Keeper of Oriental Printed Books and MSS., Lionel D. Barnett, Litt.D. ..... £700 to £800
Assistants, 1st Class, Lionel Giles, M.A.; Edward Edwards, M.A. ..... £300 to £500
Assistants, 2nd Class, A. S. Fulton, M.A.; J. Leveen £150 to £300
Keeper of Prints and Drawings, Campbell Dodgson, M.A., C.B.E. ..... £700 to £800
Assist. do. (in charge of the Sub-Dept. of Oriental Prints, &c.), R. Laurence Binyon, B.A. £520 to £650
Assistant, 1st Class, A. M. Hind, M.A., O.B.E. £300 to £500
Assistants, 2nd Class, A. E. Popham, B.A.; A. D. Waley, B.A.; H. M. Hake, B.A. ..... £150 to £300
Keeper of Egyptian and Assyrian Antiquities, Sir Ernest A. Wallis Budge, Litt.D., F.S.A. ... £700 to £800

Assistant Keeper, H. R. H. Hall, D.Litt., M.B.E., F.S.A. ..... £520 to £650
Assistants, 2nd Class, Sidney Smith, B.A.; C. J. Gadd, B.A. ..... £350 to £300
Keeper of Greek and Roman Antiquities, Arthur H. Smith, M.A., F.S.A. ..... £700 to £800
Assistant Keeper, H. B. Walters, M.A., F.S.A. £520 to £650
Assistant, 1st Class, E. J. Forsdyke, M.A., £300 to £500; *2nd Class*, F. N. Pryce, M.A. ..... £250 to £300
Keeper of British and Mediæval Antiquities and Ethnography, Sir Hercules Read, LL.D., F.S.A., F.B.A. ..... £700 to £800
Assistant do., O. M. Dalton, M.A., F.S.A. £520 to £650
Assistants, 1st Class, R. L. Hobson, B.A.; R. A. Smith, B.A., F.S.A.; T. A. Joyce, M.A., O.B.E. ..... £300 to £500
Assistants, 2nd Class, H. J. Braunholtz, M.A.; A. B. Tonnochy, M.A. ..... £250 to £300
Keeper of Coins & Medals, G. F. Hill, F.B.A. £700 to £800
Assistants, 1st Class, John Allan, M.A.; G. C. Brooke, B.A.; Harold Mattingly, M.A. ..... £300 to £500
Assistants, 2nd Class, E. S. G. Robinson, B.A. ..... £250 to £300
Solicitors, Messrs. Warrens, 5 Bedford Square.

THE LONDON MUSEUM,

Lancaster House, St. James's, S.W. 1.

The London Museum was instituted, on the lines of the Carnavalet at Paris, for the conservation of the antiquities, &c., of London. The Collection was originally housed in Kensington Palace, and was re-opened in 1914 at Lancaster House. The cost of administration in 1919-20 was estimated at £4,400.

Keeper, Secretary and Accounting Officer, F. A. Harman Oates, F.S.A.
Asst. Keeper and Librarian, Lt.-Col. Hon. Maurice Brett, M.V.O.
Inspector of Excavations, G. F. Lawrence.

THE NATURAL HISTORY MUSEUM,

Cromwell Road, S.W. 7.

The Natural History Collections in the British Museum were removed to South Kensington and rearranged there in 1881-85, the new museum being opened to the public in 1881. The hours of opening, &c., will be found under "Places of Interest." The administrative expenses were estimated at £88,554 in 1920-21.

Director, Sir Sidney F. Harmer, K.B.E., Sc.D., F.R.S. £1,200
Secretary, Charles E. Fagan, C.B.E., I.S.O. £1,000
Assistant, 1st Class (vacant) £500
Clerks, W. J. Anderson; Thomas Wooddisse ..... £250 to £350
Assistant, 1st Class (*Library*), Basil H. Soulsby, M.A. £500
Keeper of Zoology, Sir S. F. Harmer, K.B.E., Sc.D., F.R.S.
Assistant do., C. T. Regan, M.A., F.R.S. £520
Assistants, 1st Class, Oldfield Thomas, F.R.S.; Randolph Kirkpatrick; Dr. W. T. Calman; W. P. Pycraft; A. S. Hirst; J. G. Dollman, B.A.; Dr. Percy R. Lowe, O.B.E. ..... £300 to £500
Assistants, 2nd Class, G. C. Robson, B.A.; H. A. Bavlis, B.A.; A. K. Totton, B.A. ..... £150 to £300
Keeper of Entomology, Dr. C. J. Gahan, M.A. £800
Assistants, 1st Class, Maj. Ernest E. Austen, D.S.O.; J. Hartley Durrant; G. J. Arrow; James Waterston ..... £300 to £500
Assistants, 2nd Class, F. W. Edwards, B.A.; K. G. Blair, B.Sc.; N. D. Riley; F. Laing, M.A., B.Sc.; W. H. T. Tams ..... £150 to £300
Keeper of Geology, Dr. A. S. Woodward, F.R.S. £800
Assistant do., Dr. F. A. Bather, F.R.S. £650
Assistants, 1st Class, Dr. C. W. Andrews, F.R.S.; Dr. W. D. Lang, M.A. ..... £300 to £500
Assistant, 2nd Class, W. N. Edwards, D.A. £150 to £300
Keeper of Mineralogy, Dr. George T. Prior, M.A., F.R.S. £800
Assistants, 1st Class, L. J. Spencer, M.A.; Dr. G. F. H. Smith, M.A. ..... £300 to £500
Assistant, 2nd Class, W. Campbell Smith, M.C., M.A. ..... £150 to £300
Keeper of Botany, Dr. A. B. Rendle, F.R.S. £800
Assistants, 1st Class, A. Gepp, M.A.; E. G. Baker; J. Ramsbottom, O.B.E., M.A. ..... £300 to £500
Assistants, 2nd Class, H. F. Wernham, B.A., B.Sc.; A. J. Wilmott, B.A. ..... £150 to £300

THE VICTORIA AND ALBERT MUSEUM,

South Kensington, S.W. 7.

The history of the Museum may be said to begin in 1852, when the Museum of Ornamental Art was founded at Marlborough House. The collection consisted of certain objects which had been purchased at the 1851 Exhibition, "on account of the excellence of their art and workmanship," at a cost of £5,300, together with other specimens purchased for the use of the various Schools of Design since 1837, and dispersed among them. Additions have since been made by purchase, gift, and bequest. The older parts of the building were erected between 1860 and 1884; the new buildings were completed in 1909. The administrative expenses were estimated at £130,516 in 1920-21, and were met by a vote under Education, Science, and Art. The branch museum at Bethnal Green (administrative expenses 1920-21 £8,498) was opened in 1872. The buildings were removed from South Kensington, and re-erected on land purchased for the purpose locally.

Director and Secretary, Sir Cecil H. Smith, C.V.O., LL.D. £1,200 to £1,500

Secretariat.

Secretary to the Advisory Council, H.A. Kennedy ..... £400 to £650
Museum Superintendent, E. Hart (with allowance £100) ..... £400 to £500
Asst. Head of Sections, A. V. Fullerton ..... £400 to £500

Department of Architecture and Sculpture.

Assistant Keeper, E. R. D. Maclagan, C.B.E., B.A. ..... £520 to £650
Assistant, 2nd Class, R. P. Bedford ..... £250 to £300

Department of Ceramics.

Assistant Keepers, *C. H. Wylde, M.B.E., F.S.; B. Rackham, M.A. ..... £520 to £650
Assistant, 2nd Class, W. A. H. King ..... £250 to £300
Technical Assistant, F. G. M. Beaumont £214

Department of Engraving, Illustration, and Design, and of Paintings.

Assistant Keeper, M. Hardie, B.A. ..... £520 to £650
Assistant, 1st Class, B. S. Long, M.A. ..... £300 to £500
Assistants, 2nd Class, F. W. Stokes, B.A.; A. K. Sabin ..... £150 to £300

Library.

Keeper, G. H. Palmer, B.A. ..... £700 to £800
Assistant Keepers, T. C. Grove; A. Van de Put ..... £520 to £650
Assistant, 1st Class, H. C. Andrews, M.A. £300 to £500

Department of Metalwork.

Keeper, W. W. Watts, F.S.A. ..... £700 to £800
Assistant Keeper, H. P. Mitchell ..... £520 to £650
Assistants, 1st Class, A. J. Koop, B.A.; C. T. P. Bailey ..... £300 to £500

Department of Textiles.

Keeper, A. F. Kendrick, B.A. ..... £700 to £800
Assistant Keeper, P. G. Trendell ..... £520 to £650
Technical Assistant, A. D. H. Smith, B.A. £120 to £300

Department of Woodwork.

Keeper, *E. F. Strange, C.B.E. ..... £700 to £800
Assistants, 1st Class, O. Brackett; H. Clifford-Smith, M.A., F.S.A. ..... £300 to £500

Indian Section.

Assistant Keeper, C. S. Clarke ..... £520 to £650
Assistant, 1st Class, A. J. D. Campbell ....£300 to £500

Department of Circulation.

Secretary, J. Bailey £900
Assistant Keeper, R. F. Martin ..... £520 to £650
Assistant, 1st Class, E. W. Dennis ..... £300 to £500
Assistant, 2nd Class, A. E. J. Torrons ..... £150 to £300

Bethnal Green Museum.

Assistant Keeper, T. A. Lehfeldt ..... £520 to £650

NATIONAL LIBRARY OF WALES,

Aberystwyth.

Founded by Royal Charter, 1907, and maintained by annual grant from the Treasury. Contains valuable MSS. and rare printed books in Welch and other Celtic languages. One of the six libraries entitled to certain privileges under Copyright Act. Open daily 10 to 5, Sat. 10 to 1.

Librarian, John Ballinger, C.B.E., M.A.

* These Officers have been lent to other Departments.

NATIONAL MUSEUM OF WALES, Cardiff.

Amgueddfa Genedlaethol Cymru.

Founded by Royal Charter, 1907, and maintained by Annual Grant from the Government and Museum rate from the Cardiff City Council. New building in course of erection. The collections consist of Welch porcelain, English pottery, De Winton Collection of Continental porcelain, Pyke-Thompson collection of water-colour drawings and important collections of paintings in oil and engravings, collections illustrating bygone Welch domestic life and agriculture, Casts of pre-Norman Monuments of Wales, and Natural History collections.

The Museum, in Trinity Street, is open free daily and on Sunday afternoons. The Director's Office, City Hall, Cardiff.

President, Rt. Hon. Lord Treowen, C.B., C.M.G.
Vice-President, Major David Davies, M.P.
Treasurer, Alderman Illtyd Thomas, J.P.
Director, Dr. Wm. Evans Hoyle, M.A.
Keepers (*Archaeology*), Dr. R. E. Mortimer Wheeler, M.A.; (*Art*) Isaac J. Williams; (*Botany*) Dr. E. N. Miles Thomas, F.L.S.; (*Geology*) Dr. F. J. North; (*Zoology*) Dr. J. J. Simpson, M.A.
Secretary, A. H. Lee.

NATIONAL DEBT OFFICE,

19 Old Jewry, E.C. 2.

The National Debt Commissioners were appointed under 26 Geo. III., c. 31 (1786), by which a permanent Sinking Fund was to be established, and a sum of £250,000 issued quarterly to be applied towards the reduction of the National Debt, being commonly spoken of as "Mr. Pitt's Sinking Fund." In 1829 this was superseded by appropriating the surplus income of the year as the Sinking Fund, and this is commonly known as "The Old Sinking Fund." In 1875 "The New Sinking Fund" was set up by Sir Stafford Northcote (38-39 Vic., c. 45), and this, with the Old Sinking Fund, now mainly operates in reducing the Debt. The Commissioners are at the present time the Speaker, the Chancellor of the Exchequer, the Master of the Rolls, the Lord Chief Justice, the Paymaster-General, and the Governor and Deputy-Governor of the Bank of England. The administrative expenses of the Board were estimated at £22,230 in 1920-21.

Comptroller-General, Sir Thomas L. Heath, K.C.B., K.C.V.O., F.R.S. £2,500
Private Secretary, E. W. Kitson £100
Assistant Comptroller, G. F. Ansell, C.B.E. £800 to £1,000
Actuary, H. Weatherill, O.B.E., F.I.A. £250
Principal Clerks, T. Gowland (*Chief Clerk*), £600 to £700; H. Weatherill, O.B.E., F.I.A.; W. F. Doust; E. S. Jones ..... £550 to £700
Assistant do., E. R. Kennedy; J. J. Bree; A. L. Jockel; C. B. Hobbins; G. Rackham (*actg.*) £350 to £450
Brokers, Messrs. Mullens, Marshall, Steer, Lawford & Co. £1,500

NATIONAL GALLERY,

Trafalgar Square, W.C. 2.

The National Gallery is the result of a Parliamentary grant of £60,000 in 1824 for the purchase and Exhibition of the Angerstein collection of pictures, the present building being opened in 1838 and enlarged in 1865, 1876, 1887 and 1911. The cost of administration in 1919-20 was estimated at £34,167.

Director, Charles John Holmes £1,000
Assistant to Director, R. M. Gleadowe.
Keeper and Secretary, C. H. Collins Baker £600 to £750
Chief Clerk and Asst. Sec., G. E. Ambrose, I.S.O.

NATIONAL GALLERY OF BRITISH ART

(The Tate Gallery), Millbank, S.W. 1.

The National Gallery of British Art, better known as "The Tate Gallery," was opened in 1897 on the site of Millbank Gaol, the cost of erection (£80,000) being borne by Sir Henry Tate, who also contributed the nucleus of the present collection. The "Turner Wing," built at the expense of the late Sir Joseph Duveen, Bart., was opened to the public in 1910.

Director, Charles Aitken ..... £500 to £700
Acting Asst. Keeper and Clerk, James B. Manson £150 to £300

NATIONAL INSURANCE AUDIT DEPT.

Head Office, 3 Regent Street, S.W. 1.

By the National Insurance Act, 1911, it is provided that the accounts of Approved Societies, Branches, and Insurance Committees shall be submitted to audit by auditors appointed by the Treasury. This Department was created by the Treasury Minute of August 6, 1912.

Chief Auditor, D. H. Boggis-Rolfe.
Secretary, W. A. Middleton, O.B.E. (*Actg. Ch. Auditor*).
Chief Inspector of Audit, M. W. Dixon (*Actg. Sec.*).
Clerk in Charge of Accounts, R. McCormack.
Inspectors of Audit, (7); *Auditors*, (47); *Assistant Auditors*, (233); *Audit Clerks*, (131).

NATIONAL PHYSICAL LABORATORY,

Teddington, Middlesex.

The National Physical Laboratory was founded in the year 1901 as a public Institution for standardising and verifying instruments, for testing materials, and for the determination of physical constants. Prior to the year 1918, the property of the Laboratory was vested in the President and the Council of the Royal Society, and the Laboratory was controlled by a General Board and an Executive Committee, appointed by the President and Council of the Royal Society, and comprising representatives of the Society and of the great Technical Institutions. As from April 1, 1918, the responsibility for the maintenance of the National Physical Laboratory was undertaken by the Department of Scientific and Industrial Research.

The Laboratory comprises eight main sections:—(1) The *Physics Department* includes divisions for Heat and Thermometry, Optics, Sound, Radium and X-Ray work, and Tide Prediction. (2) The main divisions of the *Electricity Department* deal respectively with Electrical Standards, General Electrical and Magnetic Measurements, Alternating Current Tests and Research, Direct Current Measurements and Photometry. (3) The *Metrology Department* is responsible for the Laboratory Standards of length, area, volume, and mass, and among the various branches of work dealt with are the verification of standards of length, standard bars, surveying tapes, etc., the testing of engineers' gauges, including screw gauges, measurements of area, volume, and mass, the testing of barometers, hydrometers, taximeters, watches and chronometers, and the highest class of scientific glassware for volumetric measurements. The glassware testing has recently been reorganised on an increased scale owing to the growth in the manufacture of such ware in this country during the war. When the Ministry of Munitions was formed, the Laboratory was called upon to undertake the testing of the gauges; the work assumed very large dimensions, and a special building for its accommodation was provided. (4) The *Engineering Department* carries out research on engineering problems; it comprises a laboratory and experimental track for tests of road materials. (5) The *Aerodynamics Department* conducts researches on aircraft models and parts as required by the Aeronautical Research Committee of the Air Ministry; investigations on light alloys and other materials, engines and accessories, fabrics, etc., are carried out in other departments, especially the Engineering, Metallurgy, and Electrotechnics Departments, and the William Froude National Tank. (6) The *Department of Metallurgy and Metallurgical Chemistry*, in addition to researches on steels, and on aluminium and other alloys, is engaged on researches relating to Optical Glass. The equipment includes a rolling mill for the experimental working of alloys. The Metallurgical building was provided by Sir Julius Wernher in 1910. (7) The *William Froude National Tank*, the gift of Sir A. F. Yarrow for the service of the nation, carries out tests and researches on ship and propeller models for the information of designers and naval architects. (8) *Secretarial*.

[For staff *see* under RESEARCH, DEPARTMENT OF SCIENTIFIC AND INDUSTRIAL, page 260.]

NATIONAL PORTRAIT GALLERY,

St. Martin's Place, Charing Cross, W.C. 2.

The first grant to the institution was made in 1856; the collections being successively housed in Great George Street, Westminster, in South Kensington, and in Bethnal Green. The present building was opened in 1896, £80,000 being contributed to its cost by Mr. W. H. Alexander. The amount for salaries and expenses, including a grant of £1,035 for purchase of portraits, was estimated at £7,211 in 1919-20.

Director, Keeper, and Secretary, James D. Milner, F.S.A. £500 to £700

H.M. NAUTICAL ALMANAC OFFICE,
86 Lee Road, S.E. 3.

The "Nautical Almanac" was first published for 1767, by H.M. Admiralty, under whose control the office now remains. The expenses of preparation were estimated at £4,750 in 1920-21.

Superintendent, P. H. Cowell, D.SC., F.R.S. £650
Chief Assistant, B. F. Bawtree .....£400 to £500
Assistants, J. A. Sprigge; W. F. Doak, M.A., F.R.A.S.; T. C. Hudson, B.A., F.R.A.S. .....£300 to £400

OBSERVATORIES.

Royal Observatory, Greenwich.

The Royal Observatory was founded by Charles II. in 1675, the building, designed by Moore and Wren, being opened in 1676. The administrative expenses of the Observatory are estimated at about £1,600 annually.

Astronomer Royal, Sir F.W. Dyson, LL.D., F.R.S. .....£1,000 to £1,200
Chief Assistants, J. Jackson, M.A., B.SC., F.R.A.S.; H. S. Jones, M.A., B.SC., F.R.A.S. .....£400 to £700
Assistants, Andrew C. D. Crommelin, D.SC., F.R.A.S.; C. Davidson, F.R.A.S.; W. Bowyer, F.R.A.S.; W. M. Witchell, B.SC., F.R.A.S. (*acting*); W. W. Bryant, B.A., F.R.A.S. (*Magnetic and Meteorological*)...£200 to £600
Junior do. (*Higher Grade*), H. Furner, F.R.A.S.; F. J. Melotte, F.R.A.S. .....£300 to £400
Clerical Assistant, D. J. R. Edney, F.R.A.S. .....£350 to £450

Royal Observatory, Cape of Good Hope.

Astronomer, S. S. Hough, M.A., F.R.S. .....£867 to £967
Chief Assist., J. K. E. Halm, PH.D., F.R.A.S. .....£667 to £767
Assistants, W. H. Cox; J. Lunt, D.SC.; R. Woodgate .....£325 to £575

Other British Astronomical Observatories.

Armagh, Rev. W. F. A. Ellison, M.A.
Cambridge, Prof. A. S. Eddington, M.A., F.R.S. (Plumian Prof.); (*Solar Physics*), Prof. H. F. Newall, D.SC., F.R.S.
Dunsink, Prof. H. C. Plummer, M.A. (Royal Astronomer of Ireland).
Durham, Col. E. H. Hills, R.E., C.M.G., D.SC., F.R.S.
Edinburgh (*Royal Observatory*), Prof. R. A. Sampson, D.SC., F.R.S. (Astronomer Royal for Scotland); (*Calton Hill*), Sir W. Peck.
Liverpool, W. E. Plummer, M.A.
Oxford (*University*), H. H. Turner, D.SC., F.R.S. (Savilian Prof. of Astronomy); (*Radcliffe*), Dr. A. A. Rambaut, D.SC., F.R.S.
Salcombe Regis (*Hill Observatory*), Dr. W. J. S. Lockyer, PH.D.
South Kensington (*Imperial College*), Prof. A. Fowler, F.R.S.
Stonyhurst College, Rev. A. L. Cortie, S.J.

DEPARTMENT OF OVERSEAS TRADE (DEVELOPMENT AND INTELLIGENCE),
(Joint Department of the Foreign Office and the Board of Trade),
35 Old Queen Street, S.W. 1.

City Branch Office, 73 Basinghall Street, E.C. 2.
Foreign Samples Show Room and Foreign Catalogues Library, 7-11 Old Bailey, E.C. 4.

This Department was formed during the autumn of 1917 as a joint Department under the Foreign Office and Board of Trade, and is represented in Parliament by a Parliamentary Secretary, who occupies the position both of Additional Parliamentary Under-Secretary of State for Foreign Affairs and also of Additional Parliamentary Secretary at the Board of Trade. The Department is concerned mainly with the promotion and development of overseas trade, and comprises the former Department of Commercial Intelligence of the Board of Trade and a part of the Foreign Trade Department of the Foreign Office. It has, in addition, taken over certain functions hitherto performed by the Foreign Office in connexion with commercial intelligence and with the Commercial Counsellor and Consular Services. The cost of administration was estimated at £384,899 in 1920-21.

PATENT OFFICE
(and Industrial Property Department, Board of Trade), 25 Southampton Buildings, W.C. 2.

The prerogative of the Crown to grant monopolies was limited by 21 James I. c. 3 to the grant of Letters Patent for New Inventions, and the control of such grants was transferred to the Board of Trade by 46 & 47 Vict. c. 57. The duties are performed by a Comptroller-General with a staff of officials. The administrative expenses were estimated at £353,273 in 1920-21.

Harbour Masters, (*Upper District*) Capt. D. R. Buchan, Old Swan Pier, E.C. 4; (*Lower District*) Capt. F. W. Kershaw, O.B.E., Gravesend.

POST OFFICE.

Chief Office, St. Martin's-le-Grand, E.C. 1.

A House of Commons report in 1844 states: "It is uncertain at what precise period the Crown undertook to be the regular carrier of letters for its subjects." The first "Master of the Posts" was appointed in 1516, but the duty was not then undertaken as a remunerative department of the Government. The Post Office is now one of the three great revenue-collecting departments, and while efficiently discharging its multifarious duties, shows a large annual profit. It also receives large sums for duties and taxes on behalf of the Inland Revenue Department, for certain licences for the Customs and Excise Department and the County Councils, and for National Insurance on behalf of the National Health Insurance Commissioners and the Board of Trade. The Post Office also pays Old Age Pensions. The Penny Post was inaugurated in 1840, the Book Post in 1855, the Post Office Savings Bank in 1861, the Post Office Telegraphs in 1870, the Money Order Office in 1792, Postal Orders in 1881, the Parcel Post in 1883, and the Telephone Service in 1892. The administrative expenses of the Post Office were estimated at £27,609,076 in 1919-20.

Postmaster-General, Rt. Hon. A. H. Illingworth, M.P. £2,500

Assistant P.M.G., Rt. Hon. H. Pike Pease, M.P. £1,200

Cairncross ..... £150 to £450

PRIVY COUNCIL OFFICE, Whitehall, S.W. 1.

The Privy Council is of very ancient origin. A Council, the number of which was about twelve, was instituted by Alfred, 895, and it discharged the functions of State now confined to members of the Cabinet. In the Middle Ages the Chief Advisers of the King who were permanently about him formed the Privy Council. Having become unwieldy, it was reconstituted in 1679. At present it consists of certain eminent persons whose names are given on p. 135. Members of the Cabinet must be Privy Counsellors, and they principally form the acting Privy Council. The Council is summoned as such to act "with others" upon the demise of the Crown, and many matters are referred by the Sovereign to Committees of the Council, some of which are standing Committees, and others constituted to deal with particular cases, *e.g.*, the Judicial Committee, the Board of Trade, *q.v.* The Lord President of the Council is the Fifth Great Officer of State, and as such is always a prominent member of the Cabinet.

Lord President of the Council, Rt Hon. Arthur James Balfour, O.M., M.P. £2,000
Private Sec., Maj. Hon. E. Lascelles, D.S.O., M.C.
Clerk of the Council, Sir Almeric W. FitzRoy, K.C.B., K.C.V.O. £1,500

Secretary, G. A. Calder £1,500
Assist. do. and Chief Clerk, H. G. H. Barnes £600 to £800
Solicitor, C. L. Nicholson .....£1,200 to £1,500
Asst. do., D. F. Buckley .....£550 to £700

QUEEN ANNE'S BOUNTY, 3 Dean's Yard, S.W. 1.

Incorporated in 1704, when Queen Anne, with the consent of Parliament, transferred to the Governors the annual income of the "first fruits" and "tenths" derived from the sees, dignitaries, and benefices, with a view to the augmentation of insufficiently endowed livings. These charges were originally levied on all clerical incomes and paid to the Pope, but were made part of the Crown revenue by Henry VIII. More than half of the benefices in England and Wales are free from these charges, having either been exempted from them by statute or formed since the charges were imposed. "First fruits" represent one year's income of a benefice in the time of Henry VIII.; the "tenths" an annual sum of a tenth part of that income. The income from this source amounts to about £15,000 per year, which, with the surplus income from capital held by the Governors, is distributed in grants towards the relief of dilapidation assessments on benefices not exceeding £200 in net annual value. The Governors act as trustees for endowments and many descriptions of Church funds. They are also empowered to lend money upon mortgage of benefices for improvements to parsonage houses and farm buildings, in certain cases for rebuilding chancels, and for dilapidations.

Secretary & Treasurer, William R. Le Fanu.
Chief Clerk, George Simpson.
1st Class Clerks (Senior Division), John F. Sapsford; R. G. Rowland; E. Jump; W. Russell; W. J. P. Smith; D. Smeaton.
Do. (Junior Division), W. Holford; A. G. Spencer; S. D. Knight; J. H. Hurdman; W. J. Gimson; G. C. Baird.
Solicitor, F. G. Hughes.
Asst. Solicitor, W. G. Hannah.
Architect, William Alfred Hughes.
Accountant, M. S. Rogers.
Auditor, H. C. Garland, 41 Finsbury Pavement, E.C. 4.

DEPARTMENT OF SCIENTIFIC AND INDUSTRIAL RESEARCH,
16 & 18 Old Queen Street, Westminster, S.W. 1.

The Committee of the Privy Council for Scientific and Industrial Research was appointed by Order in Council dated July 28, 1915, to direct, subject to such conditions as the Treasury may from time to time prescribe, the application of any sums of money provided by Parliament for the organisation and development of Scientific and Industrial Research. The Committee of the Privy Council is now constituted as follows:—The Lord President, The Secretary of State for the Colonies, The Chancellor of the Exchequer, the Secretary for Scotland, the Chief Secretary for Ireland, The President of the Board of Trade, The President of the Board of Education, The Most Hon. The Marquess of Crewe, K.G., LL.D., The Rt. Hon. Viscount Haldane of Cloan, K.T., O.M., The Rt. Hon. Lord Gainford of Headlam, The Rt. Hon. Sir Arthur H. D. Acland, Bart., LL.D., The Rt. Hon. Arthur Henderson, M.P. The Order in Council also appointed an Advisory Council to whom all proposals for researches stand referred. By Charter dated November 23, 1916, the official members of the Committee of the Privy Council were created a Body Corporate under the name of "The Imperial Trust for the Encouragement of Scientific and Industrial Research" to hold and dispose of money and other property for the purposes of the Committee. On December 15, 1916, a separate Department having its own Parliamentary Vote was created for the service of the Committee.

President of the Committee of the Privy Council, The Lord President of the Council.
Vice-Chairman of the Committee of Council, The President of the Board of Education.
Advisory Council, Sir William S. McCormick, LL.D. (*Chairman*); Sir George T. Beilby, F.R.S.; Sir John Cadman, K.C.M.G., D.SC.; Prof. J. B. Farmer, F.R.S.; Sir Maurice Fitzmaurice, C.M.G., F.R.S.; Professor J. A. McClelland, F.R.S.; W. B. Hardy, SEC.R.S.; Sir Henry A. Miers, D.SC., F.R.S.; Hon. Sir Charles A. Parsons, K.C.B., F.R.S.; Sir J. J. Thomson, O.M., PRES.R.S.; Professor J. F. Thorpe, C.B.E., F.R.S.; Sir Richard Threlfall, K.B.E., F.R.S.; Professor S. Young, F.R.S.

Staff of the Department.

Secretary, Sir H. Frank Heath, K.C.B. £2,200
Private Secretary, A. F. Barnes.
Principal Assistant Secretary, Sir Francis G. Ogilvie, C.B. £1,500
Assistant Secs., A. Abbott; Ll. S. Lloyd; H. T. Tizard .....£1,000 to £1,200
Controller of Records, C. R. Young, O.B.E., D.SC. .....£700 to £900
Principals, L. C. Bromley; Maj. E. O. Henrici, O.B.E.; A. L. Hetherington; W. A. M. Murray; P. J. Wheeldon (*Establishment Officer*).....£700 to £900
Assistant Principals, E. Barnard, D.S.O.; A. F. Barnes; I. G. Evans; J. W. Gentleman; G. R. D. Hogg; R. O'F. Oakley; A. Zaiman .....£200 to £500

Co-Ordinating Research Boards.

These Boards were established in 1920 (*a*) to provide for interchange of information between the various Government technical establishments concerning the special work which they undertake and the results achieved, so as to prevent duplication of work; though the Board should have no executive function as regards the work of these establishments; (*b*) to arrange for the communication of such information to interested persons outside the Government service when this can be done without detriment to the public interest; and (*c*) in the case of researches not otherwise adequately provided for to make the necessary arrangements to meet the requirements of Government Departments and others.

Chemistry Research Board.
Chairman, Sir Richard Threlfall, K.B.E., F.R.S.
Secretary, L. C. Bromley.

Engineering Research Board.
Chairman, The Hon. Sir Charles A. Parsons, K.C.B., F.R.S.
Secretary, L. C. Bromley.

Physics Research Board.
Chairman, Sir J. J. Thomson, O.M., PRES.R.S.
Secretary, L. C. Bromley.

Radio Research Board.
Chairman, Admiral of the Fleet Sir Henry B. Jackson, G.C.B., K.C.V.O., F.R.S.
Secretary, L. C. Bromley.

Building (Materials and Construction) Research Board.

This Board was established in 1920 to consider and direct the conduct of Research on Building Materials and methods of construction.
Chairman, The Marquess of Salisbury, K.G., G.C.V.O.
Director of Research, H. O. Weller.
Secretary, Major E. O. Henrici, R.E.

Food Investigation Board.

Director of Food Investigation, W. B. Hardy, SEC.R.S.
Secretary of the Board, Miss Freda Saxton.

Fuel Research Board.

Director of Fuel Research, Sir G. Beilby, F.R.S.
Private Secretary, Miss G. I. M. Blair.
Fuel Research Station. (See p. 243).

Tin and Tungsten Research Board.

Chairman, Sir Lionel Phillips, Bart., D.L.
Secretary, I. G. Evans.

Geological Survey Board.

Chairman, Sir Francis G. Ogilvie, C.B., LL.D.
Geological Survey. (See p. 243).

The National Physical Laboratory,
Teddington, Middlesex.
(See also page 253.)

Chairman of the General Board and Executive Committee, The President of the Royal Society.
Vice-Chairman, Sir Arthur Schuster, F.R.S.
Director, Professor Sir Joseph Petavel, K.B.E., D.SC., F.R.S.
Secretary, F. J. Selby, C.B.E.
Finance and Establishment Officer, A. Lumley.
Accountant, G. E. Bailey.
Librarian and Assistant Secretary, Miss E. M. Barker.
Clerks (Grade I.), A. May; P. H. Durham; H. Shepherd.
Clerks (Grade II.), G. P. Score; W. J. Gower.

Physics Department.
Chief Assistant, J. A. Harker, O.B.E., F.R.S.
Principal Assistants, T. Smith; G. W. C. Kaye, O.B.E., D.SC.
Senior Assistants, W. F. Higgins; E. Griffiths, D.SC.; E. A. Owen, D.SC.; A. Blackie (*acting.*)
Principal Observers, W. J. Boxall; W. H. H. Brookes; G. Badderly; A. C. Cooper; A. G. Williams.
Senior Observer, W. J. Stockwell.

Electricity Department.
Superintendent,
Principal Assistant, E. H. Rayner, SC.D.
Senior Assistants, S. W. Melsom; D. W. Dye.
Senior Observers, W. H. Eastland; W. Barnett; H. C. Sturgeon.

Metrology Department.
Superintendent, J. E. Sears, C.B.E.
Principal Assistant, S. W. Attwell.
Senior Assistant, F. H. Rolt, O.B.E.
Principal Observer, H. A. Dear.
Senior Observers, A. Turner; C. H. Parker; W. Lee; C. H. Bone.

Engineering Department.
Superintendent, T. E. Stanton, C.B.E., F.R.S.
Principal Assistant, C. Jakeman.
Senior Assistants, R. G. C. Batson; A. Bailey; J. H. Hyde.

Aerodynamics Department.
Superintendent, R. V. Southwell.
Principal Assistant, E. F. Relf.
Senior Assistants, J. R. Pannell; A. Fage; J. L. Nayler.
Senior Observers, T. H. Fewster; A. H. Bell.

Department of Metallurgy and Metallurgical Chemistry.
Superintendent, W. Rosenhain, F.R.S.
Senior Assistants, J. Murdock; S. L. Archbutt; G. Barr, D.SC.; D. Hanson.

The William Froude National Tank.
Superintendent, G. S. Baker, O.B.E., M.INST.N.A.
Senior Assistant, J. L. Kent.
Senior Observer, A. W. Riddle.

ROYAL COMMISSION FOR THE EXHIBITION OF 1851.

Offices, 1 Lowther Gardens, Exhibition Rd., S.W.7.

[Incorporated by Supplemental Charter as a permanent Commission after winding-up the affairs of the Great Exhibition, in 1851. It has for its object the promotion of scientific and artistic education by means of funds derived from its Kensington Estate, purchased with the surplus left over from the Great Exhibition.]

President of the Royal Commission, H.R.H. Prince Arthur of Connaught, K.G., K.T.
Chairman, Board of Management, Viscount Esher, G.C.B., G.C.V.O.
Chairman, Science Scholarships Committee, Sir Richard Glazebrook, C.B., F.R.S.
Secretary to Commissioners, Evelyn Shaw, M.V.O.

THE NATIONAL SAVINGS COMMITTEE, Salisbury Square, Fleet Street, E.C. 4.

President, Sir Robert M. Kindersley, K.B.E.
Chairman, Rt. Hon. Lord Islington, G.C.M.G., D.S.O.
Vice-Chairman, Sir T. G. Chambers, K.B.E.; Sir W. Schooling, K.B.E.
Members of Committee, Rt. Hon. G. N. Barnes, M.P.; Sir Cecil Beck, M.P.; Sir Joseph Burn, K.B.E.; T. L. Gilmour; Sir Hedley F. le Bas; Sir H. J. Mackinder, M.P.; Sir Arthur H. Marshall, K.B.E.; O. E. Niemeyer; James Parker, M.P.; Viscountess Rhondda, D.B.E.; G. Stuart Robertson, K.C.; Stephen Walsh, M.P.; Hartley Withers; G. Anderson, M.B.E. (*representing Trustee Savings Banks*); C. W. Crook (*representing the National Union of Teachers*); Sir G. E. P. Murray, K.C.B. (*representing the Post Office*); Sir F. Shadforth Watts (*Chairman, Mercantile Marine Advisory Committee on Savings*).
Elected by National Assembly (July, 1920), Ald. Sir Thomas Smethurst, K.B.E. (*Chairman*); Sir George Royle, O.B.E. (*Vice-Chairman*); W. A. Platt, M.B.E.; W. H. Ashmole, M.B.E.; J. Mallaband; H. B. Morris; J. Voce.
Secretary, L. Margerison, C.B.E.
Accounting Officer, J. R. Phillips, O.B.E.
Director of External Organisation, Evan Hughes, C.B.E.
Commissioners, J. E. Holden, O.B.E.; E. W. Stanger, O.B.E.; S. G. Jones, O.B.E.; Maj. H. S. Johnson, C.B.E.; D. Timins, O.B.E.; Lt.-Col. P. F. Hone, D.S.O.
Senior Clerks, S. J. Bennett, I.S.O.; T. Jordan; J. Macmillan; R. D. Kingham, O.B.E.

SCOTTISH OFFICE.

(*See* SCOTTISH SECTION, pp. 526–7.)

MINISTRY OF SHIPPING, St. James's Park, S.W. 1.

Controller, Rt. Hon. Sir Joseph Maclay, Bt. ..... *unp.*
Private Secretary, H. A. Thompson.
Parliamentary Secretary, Col. L. O. Wilson, C.M.G., D.S.O., M.P. £1,200
Private Secretary, E. W. Baynes, O.B.E.
Director of Transports & Shipping, A. E. Faulkner, C.B.E. £1,200
Private Secretary, W. J. Sims.
Secretary, C. Hipwood, C.B. £1,750
Private Secretary, E. W. Baynes, O.B.E.
Accountant-General, S. H. G. Hughes, C.B.E. ... £1,200
Directors, Sir Ernest Glover, Bart.; H. Boyd; W. C. Hynard, O.B.E.; H. B. Jenkins; Sir Charles Sanders, K.B.E.; Capt. H. Willcox, C.B.E., R.N.
Chief Technical Adviser, Sir John Esplen, K.B.E.
Deputy Directors, A. Alcorn, O.B.E.; S. H. G. Hughes, C.B.E. (*Accountant-General*); Sir Hector MacNeal, K.B.E.; A. E. Parlett, O.B.E. ..... £650 to £1,200

STATIONERY OFFICE,

Prince's Street, Storey's Gate, S.W. 1; Whitegate Lane, Hollinwood, Lancs.; 25 Forth Street, Edinburgh; Custom House, Dublin; 1 St. Andrew's Crescent, Cardiff.

H.M. Stationery Office was established in 1782, and among its duties are the supply of books and stationery to Government Departments, and the superintendence and control of Government printing, &c., contracts. The Controller, under Letters Patent, is the King's Printer of Acts of Parliament, and in him is vested the Copyright in all Government publications. The administrative expenses were estimated at £5,280,442 for 1919–20.

Controller, W. R. Codling, C.B.E., M.V.O. £1,800
Private Sec., L. S. Gray.
Deputy-Controller, Lt.-Col. N. G. Scorgie £1,200
Asst. Controller, W. G. Wightman, I.S.O. £1,000
Establishment Officer, J. B. Gotts, O.B.E. £700 to £900
Director of Finance, A. L. Screech, O.B.E. £700 to £900

Pearce (*Cardiff*) ; J. E. Penn ; A. G. Petley ; W. J. Roberts ; J. C. Rowden ; F. E. Sewell ; W. F. P. Stockham ; J. Stone ; C. B. Thornton (*Manchester*) ; H. C. Tuckey ; H. E. Wade ; J. E. H. Wilson (*Dublin*) .....£300 to £400
Examiners of Paper and Office Requisites, A. E. Dawe ; E. A. Dawe.....£300 to £400
Assistant do., E. J. H. Stallybrass ; H. A. Bromley .....£200 to £350

BOARD OF TRADE,

Great George Street, S.W. 1.

(See also *Dept. of Overseas Trade*, p. 254.)

A Board of Trade and Plantations was established by Charles II. in 1660, and in place of this body a Committee of the Council on Trade was established in 1786. The duties of this Committee (which, unlike the other Council Committees, has a president of its own) are to collect Trade Statistics, control the issue of Patents, keep the Standards of Weights and Measures, the non-legal machinery of Bankruptcy, the Registration of Joint Stock Companies, Gas Companies, Electric Lighting, Lighthouses, and Merchant Shipping, acting under the latter heading as Auditor of the accounts of the Trinity House and the Irish and Northern Lighthouse Authorities. The administrative expenses were £3,413,254 in 1919 20.

President, Rt. Hon. Sir Robert Horne, G.B.E., K.C., M.P. £5,000
Private Secs., Cecil Litchfield ; C. P. Duff ; E. W. Reardon ; F. C. Thomson, M.P. (*Party.*)
Economic Adviser to H.M. Govt., Sir H. Llewellyn Smith, G.C.B.
Private Sec. H. F. Hill.

Joint Permanent Secretaries.

General Policy, Sir Sydney Chapman, K.C.B., C.B.E. £2,000
Private Secs., W. W. Hobson ; W. B. Brown.
Administration and Finance, H. A. Payne, C.B. (*Controller*) £2,000
Private Secs., H. J. Hutchinson ; C. J. Pyke.
Parliamentary Sec., Sir Philip Lloyd-Greame, K.B.E., M.C., M.P. £1,500
Private Sec., A. E. Overton, M.C.

Additional Parliamentary Secretaries.

Rt. Hon. F. G. Kellaway, M.P.....£2,000
Private Sec., A. Mullins, C.B.E.
Rt. Hon. W. C. Bridgeman, M.P. £1 500
Private Secs., A. A. Hopper ; Capt. O. Wakeman ; Maj. J. Nall, D.S.O., M.P. (*Parliamentary*).

Pilotage Commissioner, Garnham Roper, C.B. ...£1,350
Solicitor, (vacant) .....£1,500 to £1,800
Asst. Sec. for Finance, H. Mead Taylor .....£1,000 to £1,200
Establishment Officer, S. W. Clark.....£1,000
Editor, B. of T. Journal, Harcourt Kitchin.....£1,000
Registrar General of Shipping and Seamen, C. H. Jones, C.B.E. .....£700 to £900
Deputy Warden of the Standard, Maj. P. A. McMahon, F.R.S. £800

Director, R. W. Matthew .....£1,000 to £1,200
Principal Clerks, G. E. Baker ; J. J. Wills ; C. H. Grimshaw ; G. C. L. Maunder ; W. Carter ; E. J. Elliot ; E. R. Eddison ; C. H. Boyd ; A. S. Hoskin .....£700 to £900
Clerks, H. Leak ; E. H. S. Marker ; C. P. Duff ; H. J. Hutchinson ; A. A. Hopper ; T. G. Jenkins ; A. E. Overton ; J. R. Willis ; R. J. Sharkle ; A. E. Lee ; G. S. Bailey ; H. Broadley ; C. J. Pyke ; H. F. Hill ; R. D. Fennelly ; J. G. Henderson, O.B.E. £200 to £500
Directors, Lt.-Col. H. W. G. Cole, C.S.I., O.B.E., £900 to £1,100 ; W. J. Glenny, O.B.E. .....£700 to £900
Assistant Director, C. Taylor .....£700 to £900
Principal Staff Officers, H. W. Macrosty, O.B.E. ; J. W. Verdier, O.B.E. ; J. F. Ronca, M.B.E. ; H. C. Honey .....£700 to £900
Principal Staff Officer, R. V. Headland...£750 to £850
Chief Clerk (*Companies*), E. C. Bliss... .....£600 to £800
Superintendent for Wrecks and Loss of Life at Sea, (vacant).....£500 to £650
Staff Officers and Clerks, G. B. Shepherd ; F. W. Emler ; C. E. Siedmere, £550 to £650 ; Capt. L. M. Nash ; R. W. Pinder ; J. B. Harrold, M.B.E. ; S. W. Morrison, O.B.E., £500 to £600 ; C. Wright, T. G. Gibson, M.B.E. ; F. H. Taylor ; L. E. Shepherd ; J. E. Nichols ; G. A. G. Stanley ; R. H. Haylett ; C. F. Knight, £400 to £500 ; T. Turner ; W. H. L. Patterson ; C. K. Hobson, M.B.E. ; Capt. S. E. J. Brady, M.B.E. ; S. W. Hood ; W. Palmer ; W. W. Coombs, M.B.E. ; E. Batty, O.B.E., £350 to £500 ; W. J. Smith, £350 to £450 ; A. House, £250 to £450 ; F. W. Perrett ; A. S. Lake, M.B.E. ; H. R. Bamford ; R. F. G. Heatly, M.B.E. ; B. C. Page ; J. U. Smith ; A. W. Wright ; G. E. Arkell ; P. L. Edwards ; . H. Cuthbert ; W. T. Turner ; H. L. Spencer ; W. J. Killingback ; W. E. Stimpson ; E. A. Witherden ; M. L. Barton ; H. Cowley ; L. T. Moorby. £300 to £400 ; R. F. Price .....£250 to £400
Librarian, H. W. Acres .....£400 to £500
Translator, H. D. Richardson .....£300 to £400
Assist. Clerk (*1st Class*), P. J. Descours £300 to £400
Second Div. Clerks (*Higher Grade*), C. Thornton ; E. J. Dos Santos ; W. H. Thomas ; T. W. Hodges ; P. L. Ellercamp ; W. Smith ; E. Burton ; F. P. Holmes ; H. Townsend ; C. A. Carter ; J. T. Pratten. £250 to £350

Permanent Departments.

Mines Department.
Victoria Street, S.W. 1.

Secretary for Mines, Rt. Hon. W. C. Bridgeman, M.P.
Private Secretaries, A. A. Hopper ; Captain Wakeman ; and Major J. Hall, D.S.O. (*Parliamentary.*)
Permanent Under Secretary for Mines, E. A. Gowers, C.B.
Private Secretary, A. M. Anderson.
Chief Labour Adviser, Rt. Hon. W. Brace.
Financial Adviser, D. W. Coates. C.B.E.
Director of Health and Safety. W. Walker, C.B.E.
Assistant Under Secretaries, E. J. Foley, C.B. ; H. W. Cole, C.B.E. ; C. S. Hurst, O.B.E. ; E. W. Ganderton.

Overseas Trade.
(*See* page 254.)

Industrial Property (including Patent Office).
Comptroller-General, W. Temple Franks, C.B. ...£1,500

Marine.

Asst. Secretary, C. Hipwood, C.B. .....£1,200 to £1,500

Commercial Relations and Treaties.

Asst. Secretary, H. Fountain, C.B., C.M.G. £1,000 to £1,200

Industries and Manufactures.

Asst. Secretary, P. W. L. Ashley, C.B. £1,000 to £1,200

Power, Transport and Economic.

Rates Advisory Committee.

Chairman, F. Gore Browne, K.C.
Members. Sir W. W. Berry, K.B.E.; L. A. Martin; W. J. Davis; W. A. Jepson; W. M. Acworth.

TREASURY, Whitehall, S.W. 1.

The Lord High Treasurer of England is the Third Great Officer of State, the office having been "in commission" (with certain intervals) since 1612. The Commissioners for executing the office of Treasurer of the Exchequer of Great Britain and Lord High Treasurer of Ireland consist of the First Lord, who, if a Commoner, is, *ex officio*, Leader of the House of Commons, the Chancellor of the Exchequer, and some Junior Lords, with certain Secretaries and a staff of officials. The duties of the First Lord are mainly political, as also are those of the Parliamentary Secretary and the Junior Lords; the duties of the Chancellor of the Exchequer are mainly financial, in that he performs the ancient duties of the Under-Treasurer and, after agreement with the heads of the great spending departments, arranges for the great collecting departments to provide sufficient moneys to meet the needs of the year. The papers are laid before Parliament in the form of a Budget, which the Chancellor expounds to the House, these plans being accepted, modified, or rejected by the House. The amount estimated to pay the salaries and other expenses was £187,519 in 1919-20.

FIRST LORD OF THE TREASURY—
The Rt. Hon. David Lloyd George, O.M., M.P. (*Prime Minister*) £5,000
Private Secs. to Prime Minister, J. T. Davies, C.B.; Miss F. L. Stevenson, C.B.E.; Capt. Ernest Evans.

CHANCELLOR OF THE EXCHEQUER—
Rt. Hon. Austen Chamberlain, M.P. £5,000
Private Secs., R. P. M. Gower; A. F. Hemming; J. Wilson, M.B.E.

JUNIOR LORDS—
Lt. Col. Sir R. A. Sanders, Bart., M.P. £1,000
J. Parker, C.B., M.P. 1,000
J. T. Jones, M.P. ..... *unp.*
Sir William Sutherland, M.P. £1,000

JOINT SECRETARIES—
Parliamentary, Joint, Rt. Hon. Lord Edmund Talbot, M.V.O., D.S.O., M.P.; Capt. Rt. Hon. F. E. Guest, D.S.O., M.P. £2,000
Private Secs., Miss Dalton; C. Harris.
Financial, Stanley Baldwin, M.P. £2,000
Private Sec., E. St. J. Bamford.
Permanent Secretary, Sir Warren Fisher, K.C.B. £3,500

Chief Clerk, W. T. Chard ..... £500 to £600

TRINITY HOUSE, Tower Hill, E.C. 3.

Trinity House, the first General Lighthouse and Pilotage Authority in the Kingdom, was a body of importance when Henry VIII. granted the Institution its first charter in 1514, *inter alia* "for the relief, increase and augmentation of the Shipping of this Realm of England." Since that period the duty of erecting and maintaining lighthouses and other marks and signs of the sea has by Royal Charter and Acts of Parliament been entrusted to the Corporation of Trinity House, and until 1874 Masters of the Navy were examined by the Elder Brethren of the Corporation. In the present day, the principal duty of the Corporation of Trinity House, as a Public Department, is the administration of the Lighthouse, &c., Service of England and Wales with certain statutory jurisdiction in regard to lighthouses and other seamarks in Scotland, Ireland, and the Channel Islands, whilst the Corporation are also the chief Pilotage Authority in the United Kingdom, and in their capacity as a private corporation or guild they administer certain Charitable Trusts specifically dedicated to the relief of aged and distressed master mariners and their widows. The Acting Elder Brethren of the Corporation also sit with the Judges of the Admiralty Division of the High Court of Justice, to act as Nautical Assessors in Marine Causes tried in that Court. The Lighthouse Service of the Trinity House is maintained out of the General Lighthouse Fund, this fund being provided by means of special dues called Light Dues, levied on shipping using the ports of the United Kingdom. The accounts in connection with the Lighthouse Service are rendered to the Board of Trade, who have statutory control over the expenditure, and are submitted annually to Parliament. The accounts in connection with the Charitable Trusts are rendered to the Charity Commissioners. In addition to the public and trust funds which they administer, the Corporation have at their disposal certain private funds which are applied to the maintenance of their house on Tower Hill and to other corporate purposes. The Master of the Corporation at the present time is His Royal Highness the Duke of Connaught and Strathearn, K.G. There are ten Acting Elder Brethren, one of whom is a retired officer of the Royal Navy and the other nine are retired Commanders of the Mercantile Marine, and besides two Elder Brethren who have retired from the Active List there are a number of Honorary Elder Brethren, including His Majesty The King and other members of the Royal Family. The ten Acting Elder Brethren, one of whom always is Deputy Master, form the Board which carries out the public and corporate duties of the Trinity House.

ELDER BRETHREN.

H.M. The King; *Master*, Field-Marshal H.R.H. the Duke of Connaught and Strathearn, K.G.; *Deputy Master*, Capt. Sir H. Acton Blake, K.C.M.G., K.C.V.O.; *Elder Brethren*, H.M. The King; Rt. Hon. Commodore, A. G. Hotham, C.M.G. (*Chatham*) Oct. 1, 1920

THE NAVY ESTIMATES, 1920-21.

£84,372,300 *net*; Decrease on 1919-20, £73,156,500.

The Navy Estimates for the financial year 1920-21 provide for a gross sum of £95,590,181 and a net sum, after deducting £84,372,300 as compared with £157,528,800 in the year 1919-20. Provision is made for 136,000 officers and men instead of 280,000 in 1919-20.

Vote 8—shipbuilding, repairs, maintenance, &c.—stands at £28,641,700. £4,036,772 is set aside for new construction—being the completion of vessels which were in hand at the time of the armistice and which were so far advanced that the Admiralty decided to continue work upon them. These vessels include the battle cruiser *Hood*, which has been commissioned at a total outlay of £5,610,568, the light cruisers *Effingham*, *Raleigh*, *Frobisher*, and *Hawkins*, of 9,750 tons, and the smaller light cruisers *Despatch* and *Diomede* (of 4,765 tons), the *Dunedin*, *Delhi*, and *Durham* (of 4,650 tons), and the *Cairo*, *Calcutta*, *Capetown*, and *Colombo* (of 4,190 tons), besides the light cruisers *Emerald* and *Enterprise*. All these ships, as well as the destroyer leaders, destroyers, and submarines and other small vessels, of which there is a large number, were in a forward state when the armistice was concluded. No ship has been laid down since, and in the new Estimates no provision is made for new construction.

Provision is made in the Estimates for 45,000 men in the Royal Dockyards at home. The Admiralty is estimated to cost £1,554,000, including a Naval Staff numbering 1,490.

SHIPS OF THE ROYAL NAVY.

(Including the Royal Australian and Royal Canadian Navies.)

Arranged in their various classes.

Battleships.

"All Big Gun."

Type.	Ships of Type.
Queen Elizabeth.	Malaya, Barham, Valiant, Warspite, Queen Elizabeth.
Turkish.	Erin, Agincourt.
Royal Sovereign.	Royal Sovereign, Royal Oak, Revenge, Resolution, Ramillies.
King George V.	Ajax, Centurion, King George V.
Orion.	Conqueror, Thunderer, Monarch, Orion.
Iron Duke.	Emperor of India, Benbow, Marlborough, Iron Duke.
Dreadnought.	Dreadnought.
Colossus.	Hercules, Colossus.
Neptune.	Neptune.
St. Vincent.	Collingwood, St. Vincent.
Bellerophon.	Superb, Temeraire, Bellerophon.

Pre-Dreadnought.

Formidable.	Implacable.
Lord Nelson.	Lord Nelson, Agamemnon.
King Edward VII.	Zealandia, Commonwealth, Dominion, Hibernia, Hindustan
Canopus.	Crescent (*late* Glory).
Majestic.	Caesar, Magnificent, Mars, Prince George.

Battle Cruisers.

Hood.—Hood.
Queen Mary.—Tiger.
Lion.—Princess Royal, Lion.
Indefatigable.—Australia, New Zealand.
Invincible.—Inflexible, Indomitable.
Repulse.—Repulse, Renown.
Special Class.—
Courageous.
Furious.
Glorious.

Cruisers.

Duke of Edinburgh.—Achilles.
Monmouth.— Cumberland, Essex.
Edgar.—Theseus, Gibraltar, Edgar, Crescent.
Devonshire.—Devonshire, Antrim, Carnarvon, Roxburgh.
Blake.—Blenheim.

Light Cruisers.

74 ships of "C" and "D" classes.

Monitors.

16 ships.

Torpedo-Boat Destroyers.

H (15); *Special* (6); *I* (20); *K* (12); *L* (18); *Special* (3); *M* (85); *R* (57); *S* (63); *V* (22); *W* (33).—Total, 333.

Typical Ships.

"All Big Gun" Battleships.

Type.	Tons.	Main Armament.
Queen Elizabeth (1914)	27,500	8 15-inch
Turkish (1914)	27,500	8 15-inch
Royal Sovereign (1915)	26,750	8 15-inch
King George V. (1912)	23,000	10 13·5-inch
Orion (1911)	22,500	10 13·5-inch
Iron Duke (1914)	25,500	10 13·5-inch
Dreadnought (1906)	17,900	10 12-inch
Colossus	20,000	10 12-inch
Neptune (1911)	19,900	10 12-inch
St. Vincent (1910)	19,250	10 12-inch
Bellerophon (1909)	18,600	10 12-inch

Pre-Dreadnought Battleships.

Formidable	15,000	4 12-inch, 12 6-inch
Lord Nelson (1908)	16,500	4 12-inch, 10 9·2-inch
K. Edward VII. (1905)	16,350	4 12-inch, 4 9·2-inch
Canopus (1899)	12,950	4 12-inch, 12 6-inch
Swiftsure (1904)	11,500	4 10-inch, 14 7·5-inch
Majestic (1895)	15,000	4 12-inch, 12 6-inch

Battle Cruisers.

Hood (1919)	41,200	8 15-inch
Queen Mary (1914)	27,000	8 13·5-inch
Lion (1912)	26,350	8 13·5-inch
Indefatigable (1912)	18,750	8 12-inch
Invincible (1908)	17,250	8 12-inch
Repulse (1916)	26,500	6 15-inch
Courageous (1916)	18,600	4 15-inch
Furious (1916)	19,100	10 5·5-inch
Glorious (1916)	18,600	4 15-inch

Cruisers.

Duke of Edinburgh (1907)	13,550	6 9·2-inch, 10 6-inch
Monmouth (1903)	9,800	14 6-inch
Edgar (1893)	7,700	2 9·2-inch, 10 6-inch
Devonshire (1905)	10,850	4 7·5-inch, 6 6-inch
Blake	9,000	4 6-inch, 2 4-inch

Submarines.

1st Flotilla, 12 ("K" Class).
2nd Flotilla, 8 ("L" Class).
3rd Flotilla, 7 ("H" Class).
4th Flotilla, 12 ("L" Class).
Reserve, etc., 47 (Various Classes).

RELATIVE RANK IN THE ROYAL NAVY, ARMY, AND ROYAL AIR FORCE.

	Royal Navy.	Army.	Royal Air Force.
1.	Admiral of the Fleet	Field-Marshal.	Marshal of the Air.
2.	Admiral.	General.	Air Chief Marshal.
3.	Vice-Admiral.	Lieut.-General.	Air-Marshal.
4.	Rear-Admiral.	Major-General.	Air Vice-Marshal.
5.	Commodore.	Brig.-General.	Air-Commodore.
6.	Captain.	Colonel.	Group Captain.
7.	Commander.	Lieut.-Colonel.	Wing-Commander.
8.	Lieut.-Commander.	Major.	Squadron Leader.
9.	Lieutenant.	Captain.	Flight-Lieutenant.
10.	Sub-Lieutenant.	Lieutenant.	Flying Officer (or Observer).
11.	Midshipman.	Sec. Lieutenant.	Pilot Officer.

THE WAR OFFICE,

Whitehall, S.W. 1.

The business of the War Office proper appears to have been originally entrusted, about 1620, to a Committee of the Privy Council; the Clerk in attendance on that Committee being the Secretary at War. The Secretary at War had immense power in military matters, as holding the purse; but neither the Commander-in-Chief nor the Board of Ordnance was subject to him. In 1794 a Secretary of State was first appointed. The Office of Secretary at War was not terminated at this date, but from 1855 it was amalgamated with that of Secretary of State for War until, in 1863, it was formally abolished by Act of Parliament.

In 1801, the Secretary of State for War was also given the business of the Colonies, of which he was relieved in 1854 by the appointment of a Secretary of State for the Colonies.

In 1855 the Commissariat Office, which was only a semi-military branch of the Army with headquarters at the Treasury, was transferred to the War Department; the Board of Ordnance was abolished, after an existence of more than three centuries; and the Board of General Officers and the Army Medical Department were also successively absorbed into the War Department. The year 1870 witnessed the final welding into one War Office of the civil administrative functions of the Secretary of State and the military administrative functions hitherto exercised at the Horse Guards. In that year the War Office Act vested the direct and immediate control of every branch of Army administration in the Secretary of State. Before the appointment of a Secretary of State, the military control of the Army was, to a very great extent, in the hands of the Commander-in-Chief, who was subordinated to the Secretary of State from 1895 until the abolition of the Office in 1904. In 1904 an Army Council was created by Letters Patent, and to this Council were thereby transferred all the powers exercised under the Royal prerogative by the Secretary of State for War and the Commander-in-Chief. Statutory powers were transferred by the Army (Annual) Act of 1909 (9 Edw. VII. C. 3).

The Army Council, War Office, Whitehall, S.W. 1.

Secretary of State for War (*President of the Army Council*), The Right Hon. W. L. Spencer-Churchill, M.P.

Western Command, Lieut.-Gen. Sir W. P. Braithwaite, K.C.B.

THE REGULAR ARMY.

Before the War of 1914-1918 the Regular Army of the United Kingdom consisted of voluntarily enlisted soldiers, and amounted to about 250,000 all ranks. At the outbreak of War it was increased by the embodiment of the Special Reserve, Militia, and Territorial Units, and by voluntary enlistment into "Service Units" of the New Armies, until the adoption of Compulsory Service (May 24, 1916.) During the War a total of 5,750,000, all ranks, passed into the Armies of the United Kingdom, and at the conclusion of Peace (June 28, 1919) efforts were made to effect a temporary reduction to 900,000 all ranks, with a view to the ultimate reduction of the land forces within such reach of pre-war establishments as the increased area of the British Empire may permit.

The Regular Army consists of the following units:—

Cavalry.

Household Cavalry.—1st and 2nd Life Guards and the Royal Horse Guards ("The Blues").

Cavalry of the Line.—1st, 2nd, 3rd, 4th, 5th, 6th and 7th Dragoon Guards; 1st and 2nd Dragoons; 3rd, 4th, 7th, 8th, 10th, 11th, 13th, 14th, 15th, 18th, 19th, and 20th Hussars; 5th, 9th, 12th, 16th, 17th, and 21st Lancers; and 6th Dragoons.

Royal Regiment of Artillery.

Royal Horse Artillery.—Batteries, distinguished by letters.

Royal Field Artillery.—Batteries, distinguished by numbers.

Royal Garrison Artillery.—Companies, distinguished by numbers.

Corps of Royal Engineers.

The Corps consists of Electric, Field, Fortress, Postal, Printing, Railway, Signal and Survey Companies, Bridging Train, etc.

Infantry Regiments.

The Foot Guards.—The Grenadier Guards (3 Battalions); the Coldstream Guards (3 Battalions); the Scots Guards (2 Battalions); the Irish Guards (2 Battalions); the Welch Guards (1 Battalion).

Line Regiments.—49 English Regiments (2 Battalions each, except the Worcestershire Regt., the King's Royal Rifle Corps, the Middlesex Regiment, the Rifle Brigade, and the Royal Fusiliers, which each have 4 Battalions); 3 Welch Regiments (2 Battalions each); 10 Scottish (5 Highland and 5 Lowland) Regiments (2 Battalions each); and 8 Irish Regiments (2 Battalions each); with the West India Regiment (2 Battalions) and the West Africa Regiment (2 Battalion).

The Army Cyclist Corps.

Depôt, Mill Hill.

The Machine Gun Corps.

Consisting of Infantry, Cavalry, and Motor units.

The Tank Corps.

Originally formed for the purposes of Trench Warfare.

The Royal Army Service Corps.

Consisting of Horse and Mechanical Transport and Supply and Remount Companies.

The Royal Army Medical Corps.

Supplying and organising Hospitals and providing medical officers for units.

The Royal Army Ordnance Corps.

Supplying and maintaining supplies of clothing equipment, arms, ammunition, etc.

The Royal Army Veterinary Corps.

Office of Director-General, 16 Victoria Street, S.W. 1.

The Royal Army Chaplains' Department.

With an Interdenominational Advisory Committee.

Queen Alexandra's Imperial Military Nursing Service.

Under the Presidency of Queen Alexandra.

Queen Mary's Army Auxiliary Corps.

Commandant-in-Chief, H.M. the Queen.

The Army Pay Department.

With Chief Paymasters, Staff Paymasters, Paymasters, and Assistant Paymasters.

THE AUXILIARY FORCES.

THE MILITIA.

In 1907 the "Old Constitutional Force" known as the "Militia" was transformed into the "Special Reserve," but the following Militia units were retained:—The Royal Malta Artillery, the Bermuda Militia Artillery, the Channel Islands Militia, and the Malta Militia.

THE SPECIAL RESERVE.

Cavalry.—3 Regiments (N. and S. Irish Horse and King Edward's Horse).

Artillery.—R.F.A. and R.G.A.

Royal Engineers.—All branches.

Infantry.—The 3rd Battalions of Infantry Regiments of the Line (with the exception of the 4-battalion regiments noted above, where the S.R. Bn. is the 5th) are Special Reserve Battalions, and in some cases the battalion next in numerical order is an "Extra Reserve" Battalion.

THE TERRITORIAL FORCE.

In 1907 the Yeomanry Cavalry and the Volunteers were transformed into the Territorial Force, which includes English, Welch, and Scottish Cavalry; Royal Horse, Royal Field, and Royal Garrison Artillery; Royal Engineers; Infantry; Royal Army Service Corps and Royal Army Medical Corps.

THE ROYAL MARINES.

The Royal Marines (raised in 1664) consist of the Royal Marine Artillery and the Royal Marine Light Infantry. The force appears in the official Navy List as well as in the official Army List, but it is administered solely by the Admiralty. In the table of precedence in the Army the Royal Marine Light Infantry ranks between the Royal Berkshire Regt. (the 49th Foot) and the Royal West Kent Regt. (the 50th Foot).

THE WORLD'S WAR EFFORT.

Country.	Population.	Mobilized.	Per cent. of Pop.	Killed and Missing.	Per cent. of Pop.
France	38,762,000	9,717,000	20·4	1,398,000	3·37
Great Britain	45,222,000	5,704,000	12·6	680,000	1·5
Italy	34,671,000	5,250,000	15·1	469,000	1·32
United States	91,972,000	3,800,000	4·1	122,000	0·13

COST OF THE ARMY.

The anticipated net expenditure for the year 1920–21 is £127,303,630, the total establishment provided for being 525,000 officers and other ranks, a total which is in process of reduction to 280,000 all ranks. The £127,303,630 is accounted for as to £55,000,000 for the Army on the basis of the 1914–15 establishment; as to £29,500,000 for Terminal Charges of the War; and as to £40,500,000 for the provision of Garrisons in Occupied Territories.

Details of the Estimate.

Standing Army	£68,481,630
Territorial and Reserve Forces	12,530,000
Education and Hospital Services	9,630,000
War Office and Staff of Commands	4,066,000
Terminal Charges	27,307,000
Half Pay, Retired Pay, Pensions, etc.	5,289,000
Total	£127,303,630

Sums estimated at £47,000,000 and £34,000,000 respectively due from Germany for the maintenance of the Rhine Army, and from the Dominions for the maintenance of their forces in the field, are not appropriated in aid of Army Estimates, but will be brought to account as revenue, when received.

COST OF THE ROYAL AIR FORCE.

Air Force estimates for 1920–21 show a net expenditure of £15,173,430, representing a reduction on the revised figures for 1919–20 of £38,857,420.

Details of the Estimate.

Pay, etc. of the Royal Air Force	£4,310,500
Quartering, stores (except technical), supplies, and transport	1,985,000
Technical and warlike stores	2,772,850

A. V. Vyvyan, C.B., D.S.O. Oct. 18, 1919.

METEOROLOGICAL OFFICE.

The Meteorological Office was established as a Department of the Board of Trade in 1854. Changes have been made from time to time in the management, and in 1919 the Office was attached to the Air Ministry. The control is vested in a Director and Committee appointed by the Air Council. The Gassiot Committee of the Royal Society is an Advisory Committee for geophysical subjects. The work of the Office includes:—The collection and discussion of meteorological observations from oceans and land areas all over the world; the maintenance of a number of stations for daily telegraphic reports upon which gale warnings and forecasts are based; the maintenance of observatories for the study of weather, with which are associated other geophysical subjects; and the maintenance of stations in various parts of the country for the supply of meteorological information and other requirements of aircraft. The British Rainfall Organisation, founded by G. J. Symons in 1860, has recently been associated with the Meteorological Office.

The administrative expenses are mainly met by grants from Government funds, which are borne upon the votes of the Air Ministry.

President of Committee, Maj.-Gen. Sir F. H. Sykes, G.B.E., K.C.B., C.M.G. (*Member of Air Council, Controller-General of Civil Aviation*).
Director of Meteorological Office and Chairman of Committee, Sir Napier Shaw, LL.D., SC.D., F.R.S.
Assistant Directors, Dr. C. Chree, F.R.S. (*Kew Observatory*), R. G. K. Lempfert, C.B.E., M.A. (*for Contributing Stations*), Lt.-Col. E. Gold, D.S.O., F.R.S. (*in charge of Forecasting*).

Headquarters, Air Ministry, Kingsway, W.C. 2.

Supt. of Marine Division, Commr. L. A. Brooke Smith, R.D., R.N.R.
Supt. of Forecasting, J. S. Dines, M.A.
Supt. of Air Stations (vacant).
Supt. of Meteorological Services for the Army, Capt. D. Brunt, M.A.
Chief Clerk, H. L. B. Tarrant.

Climatology and Instruments Divisions, Exhibition Road, South Kensington, S.W. 7.

Supt. of Statistics, F. J. W. Whipple, M.A.
Supt. of Instruments, R. Corless, O.B.E., M.A.
Secretary of Advisory Committee on Atmospheric Pollution, J. S. Owens, M.D., A.M.I.C.E.
Chief Clerk, T. Duncan Bell.

British Rainfall Organisation, 62 Camden Square, N.W. 1.

Supt., M. de C. Salter.

Office in Edinburgh, 122 George Street.
Supt., A. Watt, M.A.

Superintendents of Observatories.

Central (*Kew*) *and Richmond*, Dr. C. Chree, F.R.S.
Magnetic (*Eskdalemuir*), A. Crichton Mitchell, D.SC., F.R.S.E.
Western (*Valencia, co. Kerry*), L. H. G. Dines, M.A., A.M.I.C.E.
Aerological (*Benson, Oxon*), W. H. Dines, F.R.S.
North Sea (*Aberdeen*), Prof. C. Niven, F.R.S.

THE AIR PROGRAMME, 1920–21.

UNITED KINGDOM:

Striking force	4 squadrons.
Training wings	2 each of 3 squadrons (Increasing to 6 wings.)
Co-operation with Army	2 squadrons.
Co-operation with Fleet (3 of aeroplanes and 2 of seaplanes.)	5 squadrons
1 communication squadron.	
Airships	1 station.

OVERSEAS:

India	8 squadrons.
Egypt	7 squadrons.
Mesopotamia	3 squadrons.
Malta	1 squadron (seaplanes).
Alexandria	1 squadron (seaplanes).

ORDER OF WAR MEDALS.

The Army Council has given instructions that stars and medals approved for service during the Great War will be worn in the following order:—1914 Star or 1914–15 Star; British War Medal; Mercantile Marine War Medal; Victory Medal; Territorial Force War Medal; India General Service Medal (for operations against Afghanistan, 1919).

CIVIL AVIATION.

Returns supplied voluntarily by civil aerial transport firms in the United Kingdom for the period May 1 to Dec. 31, 1919, show that for Great Britain and on the Continental route 403 machines were in use, 35,330 flights were made, and 8,368 machine hours were flown, the mileage totalling approximately 593,000. The number of passengers carried was 64,416, and the weight of goods carried amounted to 67,143 lbs.

The following figures show the proportion of accidents over the whole period:

Total accidents reported	18
Approximate number of machine miles flown per accident	32,900
Approximate number of machine flights per accident	1,960
Approximate number of machine hours flown per accident	465

During the period under review four pilots were killed and six injured, and one passenger was killed and ten were injured; a third party being killed by a pony-trap accident, in which an aeroplane collided with a pony-trap. The above figures do not include the flights to Australia for the £10,000 prize offered by the Commonwealth Government.

*The sums appended to the various offices are the full incomes derivable from the estates and revenues of the Church. The Deans and Chapters of certain Dioceses (marked * in the following pages) preferred several years ago to retain in lieu of fixed annual money payments, estates estimated at that time to produce the same annual income.*

Province of Canterbury.

*CANTERBURY. £15,000.

Archbishop and Primate of All England, Rt. Hon. and Most Rev. Randall Thomas Davidson, G.C.V.O., D.D. (*consecrated* 1891). (Lambeth Palace, S.E. 1.) [Signs Randall Cantuar:] 1903

Lower House.

Prolocutor, Rt. Rev. Bishop Ryle, D.D., Dean of Westminster.

The Very Rev. the Deans; the Venerable the Archdeacons; and the Elected Proctors.

Registrar, F. H. Lee.

PROVINCE OF YORK.—Upper House.

President.—The Most Rev. the Lord Archbishop.

The Right Rev. the Lords Bishops of Carlisle; Chester; Durham; Liverpool; Manchester; Newcastle; Ripon; Sheffield; Sodor and Man; Wakefield.

Lower House.

Prolocutor, Rt. Rev. the Bishop of Beverley, D.D.

The Very Reverend the Deans of the Province; the Venerable the Archdeacons; and the Elected Proctors. *Registrar*, A. V. Hudson.

THE BOYS' BRIGADE. (Incorporated.)

The senior boys' organisation; founded in 1883 by the late Sir William A. Smith. The object of the Brigade is attained by a combination of military and religious training. Every Company is connected with a Church or other Christian body. Many of the Battalions and Companies are now recognised as Cadet Units. The total strength is 60,000 officers and boys. *Sec.*, R. S. Peacock, 34 Paternoster Row, E.C. 4.

CHURCH LADS' BRIGADE.

An appendage of the religious influence of the Parish Church; was founded in 1891, and combines a military organisation with moral and religious instruction. It is estimated that 500,000 lads have had the advantage of the Brigade's training, and to-day there are 1,327 Companies throughout the Empire, with upwards of 60,000 lads.—*Headquarters*, Aldwych House, Catherine Street, W.C.2. *Brigade Chaplain and Secretary*, Rev. Edgar Rogers, M.A.

BOY SCOUTS. (Incorporated.)

A Movement initiated and organised by Lieut.-General Sir Robert Baden-Powell, K.C.B., K.C.V.O., Chief Scout, to develop good citizenship among boys by forming their character—training them in habits of observation, obedience and self-reliance; inculcating loyalty and thoughtfulness for others; teaching them services useful to the public and handicrafts useful to themselves, and promoting their physical development and hygiene.

During the War some 100,000 Boy Scouts were employed on war work, over 100,000 joined the Colours, and a continuous service of coast-watching under the Admiralty was maintained. The Movement has taken root in all parts of the British Empire, and nearly every other country has adopted it.—*Imperial Headquarters*, 25 Buckingham Palace Road, S.W. 1.

St. Patrick's National Cathedral, Dublin.

Dean and Ordinary, Very Rev. Charles Thomas Ovenden, D.D.

GENERAL SYNOD,

Consisting of House of Bishops (13) and House of Representatives (viz., 208 clerical and 416 lay).

Honorary Secretaries, Ven. L. A. Pooler, D.D.; Very Rev. H. V. White; J. A. Maconchy; Major E. H. C. Wellesley.

Secretary to the Representative Church Body (incorporated 1870), A. F. Maude, 52 St. Stephen's Green E., Dublin.

By the Act of Union, 1800, the Church of Ireland was united with the Church of England, and the Sovereign, as one of its members, supreme governor on earth. By the Act of 1869 this union was severed, and on Jan. 1, 1871, the Church of Ireland resumed her independent position. The Act of 1869 not only disestablished the Irish Church, but also took away her endowments, nothing being left but the right to the life services of the Annuitant Bishops and Clergy (which were commuted for a capital sum), the right to claim churches in use for divine service, the right to buy the See and Glebe Houses (with garden and curtilage), and £500,000 in lieu of private endowments.

The supreme governing body of the Church of Ireland is the General Synod, which meets annually.

Subject to the General Synod are 23 *Diocesan Synods*, which are assisted by smaller elected bodies called Diocesan Councils.

The Bishop of the Diocese is chosen by the clerical and lay members of the *Diocesan Synod*. The Primate is chosen by the House of Bishops from amongst their own number.

The incumbent of the Parish is appointed by a *Board of Nomination*, consisting of 7 persons, viz.:—The Bishop, 3 diocesan nominators (2 clerical and 1 lay) appointed by the Diocesan Synod, and 3 parochial nominators (lay) appointed by the registered vestrymen of the parish.

The financial trustees of the Church are the Representative Body, composed of the Archbishops and Bishops, 13 clergymen and 26 laymen, chosen by the Diocesan Representatives in the General Synod, with 13 co-opted members (clerical or lay). This body holds the property of the Church, and administers its funds, subject to the General Synod.

The first property it held was the capital sum £7,581,075, representing the life annuities of the Bishops and Clergy paid over as commutation money by the Church Commissioners, and also £500,000 compensation for private endowments. The commutation capital on 31 Dec., 1918, was only £135,320, charged with annuities to 40 annuitants. The funds, however, in the custody of the Representative Body amounted in all to £9,569,302, made up of *Commutation* £135,320, *Parochial Sustentation* £6,981,606, *Episcopal Sustentation* £563,685, *General Synod Funds* £577,127, and *Miscellaneous purposes* £1,311,565.

Since 1869 members of the Church have paid in to the Representative Body a total sum of £8,616,597. The interest of the Diocesan and Parochial Sustentation Fund is approximately £347,000. The total amount of *assessment* for stipend paid by parishes, 1919, was £102,240, and the total amount paid for *stipends* under Diocesan Schemes was £354,432.

The number of members of the Church of Ireland, by the Census of 1911, was 524,375, or 12·0 per cent. of the entire population.

The Church of Scotland.

THE CHURCH OF SCOTLAND by law established is Presbyterian in constitution, and is governed by Kirk Sessions, Presbyteries, Synods, and the General Assembly, which consists of both clerical and lay representatives from each of the Presbyteries, and also from the Universities and Royal Burghs. It is presided over by a Moderator (chosen annually by the Assembly), to whom the King has granted precedence in Scotland, during his term of office, next after the Lord Chancellor of Great Britain. The Sovereign is represented by a Lord High Commissioner (appointed each year by the Crown), who receives the sum of £2,000 towards his expenses. The country, for Church purposes, is divided into 16 Synods and 84 Presbyteries, and there are over 1,800 ministers and licentiates engaged in ministerial work. The Church population exceeds the aggregate of all the other Presbyterian bodies, and is estimated at about half the whole population of Scotland; the number of communicants at the close of 1919 was 728,239. The sum of £643,589 was raised in 1919 for church and missionary purposes. Within the last 50 years 500 chapels, at a cost of £1,830,000, have been endowed and erected into parishes *quoad sacra*. The parish churches number 1,457. There are in addition 247 churches and mission stations, in all of which worship is regularly conducted.

Until 1560 the Church of Scotland was Roman Catholic, but in that year the Scots Parliament abolished the jurisdiction of the Pope, proscribed the Mass, and ratified a Confession of Faith drawn up by John Knox and other divines. In it all essential articles of the ancient creeds of the Church were adhered to. Ceremonies were declared to be temporary in their nature, and should be altered when they began to foster superstition. The *First Book of Discipline*, published in 1560, abolished the imposition of hands in the ordination of the clergy, but superintendents were appointed to appoint ministers and to plant and erect kirks. The Church, so reformed, was governed by a General Assembly composed of the Superintendents, ministers, and lay commissioners. A *Second Book of Discipline* was sanctioned by the Scots Parliament in 1581. Presbytery was settled in 1590. The restoration of the rights of the Bishops, civil and ecclesiastical, was, however, sanctioned by the General Assembly of 1610, and three Scottish Bishops were in that year consecrated in London. Further innovations by King James VI. alarmed the people, and the attempt of Charles I. to impose on the Church a Book of Canons and a Liturgy was met by the *National Covenant* and the restoration of Presbyterian forms, which culminated in the *Westminster Confession of Faith* in 1646. At the Restoration the Church again became Episcopal, but in 1690 the Scottish Parliament re-established Presbyterianism. By the Treaty of Union between England and Scotland (ratified by the English Parliament 6 Anne c. ii.) the Church of Scotland was secured in its Presbyterian form, and the very first official act of a sovereign of the British Empire on his *accession* is to take an oath to maintain inviolably this settlement.

LORD HIGH COMMISSIONER, Duke of Atholl, K.T., C.B., D.S.O.

MODERATOR, 1920, Rev. Thomas Martin, D.D., Peebles.

Principal Clerk, Rev. David Paul, D.D., Edinburgh.
Depute Clerk, Rev. J. A. McClymont, D.D., Edinburgh. (*Moderator Elect*, 1921.)
Procurator, Hon. Wm. Watson, K.C.
Agent, A. L. Menzies, W.S., 54 Castle St., Edinburgh.
Parliamentary Solicitor, A. H. Speus, London.

OTHER PRESBYTERIAN CHURCHES.

PRESBYTERIANISM HAS SEVERAL SUBDIVISIONS.

(1) *The United Free Church of Scotland* was formed by the Union on October 31st, 1900, of the *Free Church of Scotland* and the *United Presbyterian Church*. The United Church, by rearrangement of the Synods and Presbyteries, has 12 Synods and 64 Presbyteries. The Supreme Court is the General Assembly, which meets every year at the same time as that of the Established Church. In the year ending 31 Dec., 1919, there were 1,489 congregations and 45 preaching stations. The total membership was 528,084, and there were 2,050 Sunday Schools, with 201,014 scholars and 21,647 teachers. In 15 Foreign Mission Fields there are 370 European Mission Agents and 5,017 native pastors, evangelists, and teachers, including in both cases those of the Women's Foreign Mission. The income of the Church at the close of last financial year amounted to £1,233,322.—*Moderator* (1921), Rev. A. P. Longforgan.—*Offices*, 121 George Street, Edinburgh; and 232 St. Vincent Street, Glasgow.

(2) *The Calvinistic Methodist (Presbyterian) Church of Wales* (*see* p. 258.)

(3) *The Presbyterian Church in Ireland.*—According to the Census of 1911, the members of the various Presbyterian churches in Ireland were 439,876. The largest of these, under the superintendence of the General Assembly, consists of 36 presbyteries, 626 ministers, 561 congregations, with 104,778 communicants, 90,431 families, 7,163 Sabbath-school teachers, and 92,994 scholars. During the year 1919-1920 this branch contributed by congregational effort £265,941 for religious, charitable, and missionary purposes. The total income for the year for all purposes was £347,985. It possesses two Colleges, with power to confer Theological Degrees, comprising a staff of 13 professors and 2 lecturers, and has 35 ministerial with 3 medical missionaries in foreign parts.—*Moderator*, Rev. H. P. Glenn, B.A., Bray. *General Secretary*, Rev. W. J. Lowe, D.D., Church House, Belfast.

(4) *The Presbyterian Church of England* has 13 presbyteries, 352 congregations, 6 preaching stations, and 85,551 members. It has a Theological College (Westminster College, Cambridge), and supports 89 missionaries abroad, including 40 women. In 1918 the amount raised for all purposes was £304,941. *Moderator*, Rev. T. Barclay, B.D.—*Church Offices:* 7 E. India Avenue, E.C. 3. *Financial Sec.*, Percy Graham. *Publications Office*, 21 Warwick Lane, Paternoster Row, E.C. 4.

(5) The less numerous divisions are: The *Free Church of Scotland*, consisting of those members who did not unite with the U.P. Church; the Reformed Presbyterian Synod, the Eastern Reformed Synod, the United Original Seceders, the Secession Presbytery in Ireland, and the Synod of the Church of Scotland in England.

The Methodist Churches.

UNDER the general designation of METHODISTS are included all those religious bodies which owe their existence, directly or indirectly, to the efforts of the Revds. John and Charles Wesley. The most numerous and influential of them are—

WESLEYAN METHODISTS.

1. *Wesleyan Methodists*, the original body founded in 1739 by these two brothers. The first *Conference*, consisting of six clergymen and four laymen, was held in 1744. Since then the growth of Methodism has been great, its present adherents being given as 32,000,000. This figure, however, is probably an over-estimate, and is therefore open to correction. The latest statistics are: Ministers, 55,589; local preachers, 98,884; members and probationers, 10,184,373; Sunday schools, 94,705; officers and teachers, 954,298; scholars, 9,025,106; churches and other preaching places, 100,607. The conference is now composed in its Representative Session of 300 ministers and 300 laymen, with a ministerial president and secretary at its head, elected year by year. The Wesleyans are governed primarily by the Conference, secondarily by the Synods, which are semi-annual meetings of the ministers and selected laymen in each district, over which a chairman is appointed by the Conference, and thirdly by quarterly meetings of the ministers and lay officers of each circuit. The authority of both these last meetings is subordinate to the Conference, which has the supreme legislative and judicial power in Methodism. The Wesleyan Conference will be held at Middlesbrough in 1921. —*Pres.*, Rev. J. T. Wardle Stafford, D.D., D.C.L.; *Sec.*, Rev. John E. Wakerley.

THE PRIMITIVE METHODISTS.

2. *The Primitive Methodists*, who sprang up in Staffordshire, in 1810, under the leadership of Hugh Bourne and William Clowes. Owing to the excesses attending certain outdoor services called "camp meetings," the Wesleyan Conference prohibited the continuance of the practice. Bourne and Clowes refused to comply with this decision, and were in consequence expelled. They and their sympathisers banded together in a new body, with enlarged powers for the laity. Next to the Wesleyans they are the most numerous and the most democratic of all the denominations which have arisen out of the Methodist movement.—*President*, Rev. M. P. Davison.

THE UNITED METHODIST CHURCH.

3. *The United Methodist Church* was formed by the Union in 1907 of three denominations of Methodists, which hitherto had been separate from and independent of each other. These were:—

The Methodist New Connexion, which owed its origin in 1797 to the Rev. Alexander Kilham, one of the early itinerating Wesleyan preachers. He demanded that the members of the societies, and not the Conference, should be constituted the source of all power in Methodism; and that the Conference should consist of lay as well as ministerial members, all of whom should be elected by the members of the various societies as their delegates. He was expelled by the Conference, and at once founded a new community.

The Bible Christians, founded in 1815 by William O'Bryan, a Wesleyan lay preacher in Cornwall. They existed mainly in the West of England.

The United Methodist Free Churches, which was itself an amalgamation of three different secessions—the Protestant Methodists, formed in 1828; the Wesleyan Methodist Association, which sprang out of a controversy in 1834, concerning the need for a trained ministry; and the Wesleyan Reform Association, founded in 1849, during a great agitation. A strong opposition to the leading Wesleyan officials was organised, which found expression in Conference debates, but more strongly in anonymous and bitter pamphlets, which were widely circulated. On suspicion of being the authors and circulators of these pamphlets three ministers were expelled. They found so many sympathisers that over 100,000 members seceded to found a new denomination.

An Act of Parliament was secured in 1907 to authorise the union of these three denominations into one, to be called the United Methodist Church, and to provide for the government of the Church by a Conference consisting of an equal number of ministers and laymen, elected by districts. The act of union took place in London on September 17, 1907, when the first united Conference was held. About 700 delegates were present. A deed was adopted and signed, declaring the terms of union, defining the constitution and doctrinal tenets, and containing provisions for government and discipline.—*President*, Rev. W. S. Welch; *Secretary*, Henry Smith.

INDEPENDENT METHODISTS.

4. *Independent Methodists.*—This body is Congregational in its organisation, with an unpaid Ministry. Its first Conference was held in 1805. —*President*, W. A. Hindley.

WESLEYAN REFORM UNION.

5. This Union is Methodist in doctrine, Congregational in government, with, if any church desires it, a paid ministry. It is the remnant of the original reformers who seceded from Wesleyan Methodism in 1849. The adherents are mainly in the Midland counties.—*Secretary*, Rev. E. Bromage, Sheffield.

FINANCES.

Finances.—The *Wesleyans* raised in 1919–20 £257,695 to sustain their very extensive missionary operations. At the same time their Home missionary income was £41,924. The *Primitive Methodists* raised £1,248 for new chapels, and the *United Methodist Church* £30,688 for their missions.

The number of Members is for the United Kingdom; of Chapel and Scholars, Great Britain only.	Ministers	Lay Preachrs.	Members	On Probation.	Chapels.	Sunday Scholars.
Wesleyan Methodists	2,768	19,043	489,870	21,176	8,533	849,861

Wesleyan Reform Union	16	403	8,506	290	196	21,978

The Calvinistic Methodist (Presbyterian) Church of Wales.

The CALVINISTIC METHODIST OR PRESBYTERIAN CHURCH OF WALES is the only Church of purely Welsh origin, and embraces a very large section of the Welsh-speaking population. Its form of government being Presbyterian, it is in federation with the Presbyterian Church of England, the United Free Church of Scotland, and the Presbyterian Church of Ireland. It is also a constituent of the Pan-Presbyterian Council or Alliance. It has foreign missions in Assam, India, and in Brittany.

In 1919 the body numbered—churches, 1,481; chapels and other buildings for Sunday-school branches, 1,774; ministers and preachers, 1,175; elders, 1,989; communicants, 187,575; on probation, 1,353; Sunday-school teachers, 24,417; teachers and scholars, 191,295; adherents (including communicants), 326,647.

Contributions in aid of the Ministry in 1919, £177,726. For various religious purposes (including the ministry), £434,732.

One of the features of the Welsh churches is the Sunday-school, which is attended by adults as well as children; the vernacular is the language used generally in these schools.

The English branch of the Church has 365 chapels and preaching stations, with 32,343 communicants and 86,977 adherents (including communicants). All the rest are Welsh.

The churches in Assam number 522; communicants, 16,275; adherents (including communicants), 54,773. The adherents in Brittany are few. The daughter churches in America number 120 and in Australia 3.

Moderator (*South Wales*) *Synod*, Rev. R. J. Rees, M.A., Aberystwyth; (*North Wales*), Rev. John Owen, M.A., Carnarvon.
Moderator of General Assembly, Rev. John Morgan Jones, LL.D., Cardiff.
Secretaries, Revs. Griffith Parry Williams, M.A., Mold, and J. Henry Williams, Portmadoc.
Statistical Secretaries, Revs. John Jones, Brynyrodyn, and D. E. Thomas, Llanstephan.

The Independents and the Baptists.

The INDEPENDENTS, or CONGREGATIONALISTS, are the most ancient community of Dissenters. In 1831 the majority of their churches were formed into the Congregational Union of England and Wales, incorporated in 1902, and in 1920 nine districts were formed, each under a Moderator. There are 51 county and other Associations in England and Wales, with 4,701 churches and preaching stations containing 1,127,442 sittings; the number of ministers in the British Isles is 3,062.
Chairman of the Congregational Union of England and Wales, 1920–21, Rev. A. E. Garvie, D.D.; 1921–22, Rev. A. J. Viner. *Secretary*, Rev. Richard J. Wells. *Chief Clerk*, C. Stancliff. *Office and Publication Department*, 16, Memorial Hall, Farringdon Street, E.C. 4.

The *Countess of Huntingdon's Connexion*, with 40 chapels and mission stations, is governed by nine trustees assisted by an annual conference of ministers and delegates. *Secretary*, E. Dolby Shelton. *Offices*, 41, Holborn Hall, Gray's Inn Road, W.C. 1.

The BAPTISTS are, in all respects but one, similar to the Independents; they have the same form of Church government, and differ but in one point of practice—viz., the Baptism by immersion of believers only. Like the Congregationalists, they are for the most part grouped in associations of churches, and the majority of these belong to the Baptist Union, which was formed in 1813. In the British Isles there were, in 1919, 4,249 chapels and 2,215 pastors. The members numbered 405,540, Sunday-school teachers 54,243, and Sunday scholars 501,784. In the U.S. the "members" alone number 7,044,097.
President of the Baptist Union, 1920–21, Rev. D. J. Hiley. *Secretary*, Rev. J. H. Shakespeare, D.D. *Office*, Baptist Church House, Southampton Row, London, W.C. 1.

Minor Religious Denominations.

MINOR RELIGIOUS DENOMINATIONS.—The chief are the Unitarians, with about 350 ministers, 345 chapels and other places of worship. H.Q., Essex Hall, Essex Street, W.C.2. The Society of Friends, which consists of 20,028 members and about 9,000 other adherents in Great Britain, Cape Colony and Australasia, and 2,307 in Ireland, has 272 recorded ministers, including over 100 women; their places of worship, in 1918, numbered 408. *Central Offices for Great Britain*, 136 Bishopsgate, E.C. 2. Ireland has a separate organisation, with *Office*, 5 Eustace Street, Dublin. The Churches of Christ have 14,277 members and 186 churches in the British Isles, with 159 Sunday Schools, 1,719 teachers, and 16,811 scholars. The Moravian Church (*Offices*, 32 Fetter Lane, E.C.) has in the U.K. 43 congregations and preaching stations, with 3,680 communicants. The Catholic Apostolic Church has above 80 churches; the New Church (Swedenborgian), 75 societies, with about 6,700 registered members; the Latter-Day Saints (Mormons) have 82 churches. The Brethren, or Plymouth Brethren (divided into two bodies, "Open" and "Exclusive") number about 80,000, of whom five-eighths belong to the "Open" body. The Reformed Episcopal Church: *Presiding Bishop in England*, Rt. Rev. P. Xenophon Eldridge, D.D., St. Jude's Ch., Balham, S.W. The Old Roman Catholic Church: *Archbishop in Great Britain*, Most Rev. Bernard Mary Williams, The Edge, Stroud, Glos. Among the inhabitants of the United Kingdom are about 300,000 Jews, mainly in London and other large towns, who possess 200 synagogues, with about 200 ministers and readers. *Chief Rabbi*, Very Rev. Dr. J. H. Hertz. Chief Rabbi's Office, Mulberry Street, Commercial Road, E.1. The Jews support their own poor. Their number throughout the world is computed at fourteen millions. The Greeks have churches in London, Manchester, Liverpool, and Cardiff. The Armenians have churches in London and Manchester; the French, Dutch, Swedes, and Swiss in London, Norwich, and Canterbury; and there is a mosque for Moslems.

In *England* and *Wales* there are 4 Archiepiscopal and 13 Episcopal Sees; in *Scotland* 2 Archiepiscopal and 4 Episcopal Sees; in *Ireland* 4 Archiepiscopal and 24 Episcopal Sees. In the *British Empire* there are 38 Archiepiscopal and 112 Episcopal Sees, with 54 Vicariates and 9 Prefectures Apostolic, as follows:—

THE SALVATION ARMY was founded by General William Booth (*b.* 1829, *d.* 1912). In Dec., 1919, the number of *Officers*, *Cadets* and *Employés* was 24,582, of *Corps* and *Outposts*, 11,173, *Local Officers*, 71,419. The number of countries occupied was 70, and of languages used 42. Connected with the Salvation Army are numerous philanthropic institutions, including 116 Industrial Homes for Fallen Women, 38 Maternity Homes and 87 Children's Homes, 196 Slum Posts, 16 Prison-Gate Homes, 265 Shelters and Cheap Food Depôts for the Homeless, 179 Workshops and Factories, 123 Labour Bureaux, 25 Farms, &c. More than 37,900 open-air meetings are held weekly, and a still larger number in the various halls of the organisation. At a large number of police courts, many gaols, and some convict establishments, Salvation Army officers are constantly in touch with prisoners, both of the first-offender class and confirmed criminals. In many instances men and women of both classes are taken into the care of the Army at the prison gate. Magistrates sometimes commit first offenders to the care of the Army instead of to prison. The total raised during "Self-Denial Week" in 1920 amounted to £268,010. Balance-sheets and statements of account relating to the General Funds or to the Social Funds can be obtained, post free, from 101 Queen Victoria Street, E.C. 4.—GENERAL, Bramwell Booth (1912), Queen Victoria Street, London, E.C. 4.

THE UNIVERSITY OF OXFORD.

ORGANISATION OF TEACHING.

On January 1, 1907, University College was transferred to the University, of which it now forms an integral part in the Faculties of Arts, Laws, Medicine, Science, Engineering, and Economics. On January 1, 1910, King's College was, in respect of all its Departments except that of Theology, transferred to the University, of which it now forms an integral part, but is divided into two separate institutions, viz.: (*a*) "King's College" (in the Faculties of Arts, Laws, Medicine, Science, Engineering, and Economics) and (*b*) "King's College for Women" (in the Faculties of Arts and Science). The Theological Department of the College remains a "School of the University" in the Faculty of Theology. Other Institutions maintained by the University are the Brown Animal Sanatory Institution in Wandsworth Road, the Physiological Laboratory in the University buildings at South Kensington, Goldsmiths' College at New Cross, the Francis Galton Laboratory for National Eugenics at University College, and the Ratan Tata Department of Social Science and Administration at the London School of Economics and Political Science.

TEACHING STAFF.

The numbers of the "Appointed" and "Recognised" Teachers in the several Faculties are as follows:—

Theology, 0 and 22; *Arts*, 59 and 168; *Laws*, 4 and 9; *Music*, 1 and 21; *Medicine*, 19 and 320; *Science*, 53 and 218; *Engineering*, 12 and 78; *Economics*, 19 and 18.

DEANS OF THE FACULTIES, 1920–22.

Theology, Rev. Prof. S. W. Green, M.A.
Arts, Prof. Sir Sidney Lee, LL.D., Litt.D., F.B.A.
Laws, H. J. H. Mackay, M.A., LL.B.
Music, T. F. Dunhill, A.R.C.M.
Medicine, H. J. Waring, C.B.E., M.S., M.B., F.R.C.S.
Science, A. N. Whitehead, Sc.D., M.A., F.R.S.
Engineering, Prof. E. G. Coker, D.Sc., F.R.S.
Economics, Mrs. Knowles, Litt.D.

UNIVERSITY COLLEGE, Gower Street, W.C. 1.
Chairman of Committee, Lord Reay, K.T., G.C.S.I.
Provost, Sir Gregory Foster.

Polytechnics aided by the L.C.C.

BATTERSEA POLYTECHNIC, Battersea Park Road, S.W.—*Principal*, Robt. H. Pickard, D.Sc., F.R.S.

BIRKBECK COLLEGE, Breams Buildings, Chancery Lane.—*Principal*, George Senter, D.Sc.

BOROUGH POLYTECHNIC, Borough Road, S.E.1.—*Principal*, C. T. Millis, M.I.Mech.E.

CITY OF LONDON COLLEGE, White Street, Moorfields.—*Principal*, Sidney Humphries, B.A., LL.B.

NORTHAMPTON POLYTECHNIC, 280 St. John Street, E.C.1.—*Principal*, R. M. Walmsley, D.Sc.

NORTHERN POLYTECHNIC, Holloway Rd., N.7.—*Principal*, R. S. Clay, D.Sc.

REGENT STREET POLYTECHNIC, 309 Regent Street, W.1.—*Director of Education*, Major Robert Mitchell, C.B.E.

SIR JOHN CASS TECHNICAL INSTITUTE, Aldgate.—*Principal*, C. A. Keane, D.Sc.

SOUTH-WESTERN POLYTECHNIC, Manresa Road, Chelsea, S.W.—*Principal*, S. Skinner, M.A.

WOOLWICH POLYTECHNIC, William Street, Woolwich, S.E.18.—*Principal*, A. F. Hogg, M.A.

Technical Institutes, &c., aided by the L.C.C.

ALBANY INSTITUTE DOMESTIC ECONOMY SCHOOL FOR GIRLS, Albury Street, Deptford.—*Head Mistress*, Mrs. Landels.

BERMONDSEY SETTLEMENT, Farncombe Street, Jamaica Road, S.E.—*Warden*, Rev. J. Scott Lidgett, D.D.

CHURCH INSTITUTE, Wiseton Rd., Upper Tooting.—*Hon. Secretary*, C. H. Baker.

COLLEGE FOR WORKING WOMEN, 7 Fitzroy Street, W.1.—*Hon. Secretary*, Mrs. H. F. Plant.

DEVAS INSTITUTE, New Road, Battersea, S.W.—*Secretary*, W. F. Holmes.

GOLDSMITHS' COLLEGE, New Cross, S.E.14.—*Warden*, T. Raymont, M.A.

HEROLD'S INSTITUTE, Drummond Road, Bermondsey (*Branch of the Borough Polytechnic*).—*Principal*, C. T. Millis, M.I Mech.E.

LEATHERSELLERS' COMPANY'S TECHNICAL COLLEGE, 176 Tower Bridge Road, S.E.—*Principal*, Dr. J. Gordon Parker, F.I.C.

MORLEY COLLEGE, Waterloo Road, S.E.—*Vice-Principal*, Miss C. I. Brennand.

NEWCOMEN'S FOUNDATION TRADE SCHOOL FOR DOMESTIC SERVICE, Newcomen Street, Borough, S.E. 1.—*Lady Principal*, Miss R. A. Roberts.

ROYAL SCHOOL OF ART NEEDLEWORK, Exhibition Road, S.W.—*Principal*, Miss E. Bradshaw.

SAILORS' HOME, Dock Street, E. (School of Nautical Cookery). — *Secretary*, Payr.-Lt.-Comm. A. E. Loder, R.N.R.

ST. BRIDE FOUNDATION INSTITUTE, Bride Lane, Fleet Street, E.C. (for Printing Trades).—*Principal*, J. R. Riddell.

SCHOOL OF WOOD-CARVING, 39 Thurloe Place, S.W. 7.—*Secretary*, J. Bailey.

WANDSWORTH TECHNICAL INSTITUTE, High Street, Wandsworth, S.W. 18.—*Hon. Principal*, A. R. Gridley, M.A.

WORKING MEN'S COLLEGE, Crowndale Road, N.W. 1.—*Superintendent*, A. A. Aldworth, M.A.

Schools of Art aided by the L.C.C.

BLACKHEATH, LEE, LEWISHAM AND GREENWICH, *Temp. premises*, Lee Terrace, Blackheath.—*Principal*, J. Howard Hale.

ST. MARTIN'S, 107 Charing Cross Road, W.C.—*Headmaster*, J. E. Allen.

In addition to the above schools there are Art Schools or Classes attached to all the Polytechnics, except the Northern Polytechnic. Schools of Art are also conducted by the City and Guilds of London Institute at Finsbury Technical College and at the South London Technical Art School, 122–124 Kennington Park Road (see below).

II.—OTHER LONDON INSTITUTIONS.

Imperial College of Science and Technology,
South Kensington, S.W. 7.
Visitor: H.M. THE KING.

Chairman of Governing Body, The Marquess of Crewe, K.G.

Chairman of Executive Committee, Right Hon. Sir Arthur Acland.

Chairman of Delegacy, Walter T. Prideaux.

An Institution for the most advanced training and research in Science, especially in its application to industry. The Departments and Professors are :—

Royal College of Science.

Aeronautics: Sir Richard Glazebrook, K.C.B., F.R.S. (*Aviation*); Sir Napier Shaw, F.R.S. (*Meteorology*); L. Bairstow (*Aerodynamics*).

Mathematics: A. R. Forsyth, F.R.S., A. N. Whitehead, F.R.S. (*Applied*); *Physics:* H. L. Callendar, C.B.E., F.R.S., A. O. Rankine, F.R.S., A. Fowler, F.R.S. (*Astro-Physics*); *Technical Optics*, F. J. Cheshire; A. E. Conrady, *Optical design*; A. Pol'ard, *Mechanical design*; *Chemistry:* H. B. Baker, F.R.S., J. F. Thorpe, F.R.S. (*Organic*), J. C. Philip (*Physical*); *Chemical Technology — Fuel and Refractory Materials:* W. A. Bone, F.R.S.; *Biology:* J. B. Farmer, F.R.S. (*Botany*), E. W. McBride, F.R.S. (*Zoology*), V. H. Blackman, F.R.S. (*Plant Physiology*), P. Groom (*Woods and Fibres Technology*), H. M. Lefroy (*Entomology*); S. B. Schryvor (*Biochemistry*); *Geology:* W. W. Watts, F.R.S., C. G. Cullis (*Economic Mineralogy*).

Royal School of Mines.

Mining: S. J. Truscott; *Mine Surveying*, L. H. Cooke; *Mining Geology*, W. W. Watts, F.R.S.; *Metallurgy:* H. C. H. Carpenter, F.R.S.; *Oil Technology:* W. W. Watts, F.R.S.

City and Guilds (Engineering) College.

Mechanical Engineering and Motive Power: W. E. Dalby, F.R.S.; *Civil Engineering:* S. M. Dixon; *Electrical Engineering:* T. Mather, F.R.S.

Rector, Sir Alfred Keogh, G.C.B.

Secretary, A. Gow, M.A.

City and Guilds of London Institute,
Gresham College, E.C. 2.

(1). *City Guilds Engineering College* (see Imperial College of Science and Technology).

(2). *Technical College*, Leonard Street, Finsbury, E.C.—*Professors:* A. J. Margetson, M.Sc., M.I.M.E., *Civil and Mech. Engineering*; (vacant), *Applied Chemistry*; W. H. Eccles, D.Sc., *Applied Physics and Electr. Engineering.*

(3). *Technical Art School*, 122 and 124 Kennington Park Road, S.E.

(4). *Department of Technology*, Exhibition Road, S.W. 7.

CORDWAINERS' TECHNICAL COLLEGE, 42, Bethnal Green Road, E. 1.—*Principal*, F. Y. Golding.

CRYSTAL PALACE (School of Practical Engineering).—*Principal*, J. W. Wilson, M.Inst.C.E.

EAST LONDON COLLEGE (*see* University of London).

FARADAY HOUSE ELECTRICAL ENGINEERING COLLEGE (Southampton Row, W.C.).—*Princ.*, A. Russell, D.Sc.

INSTITUTE OF CERTIFICATED GROCERS (Incorporated), 4 Cullum St., E.C. 3.—*Sec.*, C. L. T. Beeching.

POLYTECHNIC SCHOOL OF ENGINEERING (Electrical, Civil, Motor, Aero, and Mechanical), 307-312 Regent Street, W.—*Head of School*, Henry J. Spooner, M.I.Mech.E.

SCHOOL OF MOTOR BODY AND CARRIAGE BUILDING (Balderton St., W.).—*Head of Depart.*, Ernest Bailey.

SOUTH OF ENG. COLL. OF PHARMACY (186 Clapham Rd., S.W. 9).—*Principal*, H. Lucas, F.C.S.

TRADES' TRAINING SCHOOLS, 153 Great Titchfield Street, W. 1.—*Director*, Sir Banister Fletcher, F.R.I.B.A.

WILLESDEN POLYTECHNIC, Priory Park Road, N.W. 6.—*Principal*, A. J. Bird.

PROVINCIAL TECHNICAL COLLEGES.

ASHTON-UNDER-LYNE (Heginbottom Techn. Sch.).—*Principal*, A. Morris, B.Sc.

BANBURY (Munic. Techn. Sch.).—*Headmaster*, R. Luscombe, B.A.

BARROW-IN-FURNESS (Techn. Sch.). — *Princ.*, David Bardman, M.Sc.

BATH (Munic. Techn. Coll.).—*Director*, A. G. Day, A.M.I.Mech.E.

BATLEY (Techn., Art Sch. and Voly. Day Contn. Sch.).—*Principal*, N. B. Ratcliffe, M.Sc.

BELFAST (Munic. Techn. Inst.).—*Princ.*, Rupert Stanley, B.A., M.I.E.E.

BIRKENHEAD (Holt Techn. Sch., Tranmere).—*Princ.*, J. E. L. Barnes, M.I.M.E.

BIRMINGHAM (Munic. Techn. Sch.). — *Princ.*, W. E. Sumpner, D.Sc.

" (Tech. Sch., Handsworth).—*Princ.*, W. E. Harrison, B.Sc.

" (Techn. Sch., Aston).—*Princ.*, C. A. White, M.B.E., M.Sc.

" (Vittoria St.—For Jewellers and Silversmiths).—*Headmaster*, A. J. Gaskin.

BLACKBURN (Munic. Techn. Coll.).—*Princ.*, F. J. Harlow, B.Sc.

BOLTON (Munic. Techn. Sch.).—*Director*, F. Wilkinson, C.B.E., F.G.S.

BOOTLE (Munic. Techn. Sch.). — *Principal*, Laurence Small, B.Sc.

BRADFORD (Techn. Coll.).—*Princ.*, H. Richardson, M.Sc.

BRIERLEY HILL, STAFFS (Techn. Inst.).—*Princ.*, H. B. Cronshaw, B.A.

BRIGHOUSE (Techn. Sch.). —*Sec.*, A. W. Hoyle, B.Sc.

BRIGHTON (Munic. Techn. Coll.). — *Princ.*, W. Mansergh Varley, M.A., D.Sc.

BRISTOL (Merchant Venturers' Technical Coll.). —*Princ.*, Prof. J. Wertheimer, D.Sc.; *Sec.*, G. H. Pope, B.C.L.

BURNLEY (Munic. Coll.). — *Princ.*, W. Mun Rankin, B.Sc.

BURY (Munic. Techn. Sch.).—*Princ.*, R. Wilkinson, B.A.

CAMBORNE (Sch. of Metalliferous Mining).—*Princ.*, Alex. Richardson, M.I.M.M.

CARDIFF (City Techn. Coll.).—*Princ.*, Charles Coles, B.Sc.

CHELTENHAM (Techn. Sch.).—*Director*, F. W. Dickenson, M.A.

CHORLEY (Munic. Techn. Inst.).—*Head Master*, C. H. Glew.

COVENTRY (Munic. Techn. Inst.).—*Princ.*, D. R. MacLachlan, B.Sc., A.M.Inst.C.E.

CREWE (Technical Inst.).—*Princ.*, J. Smith, M.B.E., M.Eng.

CROYDON (Central, S. Norwood, and Thornton Heath Polytechnic).—*Princ.*, W. Thomson, M.A.

DARLINGTON (Techn. Coll.). — *Princ.*, J. W. Angles, M.Sc.

DARWEN (Munic. Techn. Sch.)—*Principal*, R. Roberts, B.Sc.

DERBY (Tec. Coll.).—*Principal*, F. W. Shurlock, B.Sc.

DEVONPORT (Plymouth and Devonport Techn. Sch.).—*Princ.*, W. S. Templeton, M.A., B.Sc.

DEWSBURY (Techn. Sch., Day Cont. Sch., and Sch. of Art).—*Head Master*, H. J. Taylor, F.C.S.

DONCASTER (Techn. Coll.).—*Princ.*, J. Eagles, A.R.C.Sc.

DOVER (Sch. of Sci. and Tech., Ladywell).—*Princ.*, F. Whitehouse, M.A.

DUBLIN (Royal College of Science).—*Dean of Faculty*, H. H. Jeffcott, M.I.Mech.E.

EAST HAM (Techn. Coll.).—*Princ.*, W. H. Barker, B.Sc.

EDINBURGH (Heriot-Watt Coll.).—*Princ.*, A. P. Laurie, M.A., D.Sc.

GLASGOW (Royal Technical College, George St. (1796), affiliated to the University of Glasgow 1913.—*Director*, H. F. Stockdale, LL.D., F.R.S.E.

HALIFAX (Munic. Techn. Coll.). — *Princ.*, J. Crowther, B.Sc.

HUDDERSFIELD (Techn. Coll.). — *Princ.*, J. F. Hudson, M.A.

HULL (Munic. Techn. Coll.).—*Princ.*, T. Luxton, B.A., B.Sc.

IPSWICH (Munic. Techn. Sch.).—*Princ.*, P. Wilkinson, B.A., B.Sc.

KEIGHLEY (Techn. Inst.).—*Princ.*, T. P. Watson, M.A.

LANCASTER (Storey Inst.).—*Headmaster*, F. H. Mould, B.Sc., A.R.C.S.

LEEDS (Central Techn. Sch.).—*Principal*, R. E. Barnett, B.Sc.

LEICESTER (Munic. Techn. Sch.).—*Principal*, J. H. Hawthorn, M.A.

LINCOLN (Munic. Techn. Sch.). — *Principal*, A. E. Collis, M.I.M.E.

LIVERPOOL (Munic. Techn. Sch.). — *Director*, James G. Legge, B.A.; *Princ.*, J. Scholes Hague, M.Sc.

MANCHESTER (Munic. Coll. of Technology).—*Princ. (acting)*, James Moir, M.A.

NEWCASTLE-UPON-TYNE (Rutherford Technical College).—*Princ.*, C.L. Eclair-Heath, A.M.I.M.E.

NEWRY (Munic. Techn. Sch.).—*Princ.*, T. J. Flynn, D.Ec.

NORTHAMPTON (Techn. Sch.).—*Principal*, J. Blakeman, M.A., M.Sc.

NORWICH (Techn. Inst.).—*Princ.*, H. Ramage, M.A., F.R.C.Sc.I.

NOTTINGHAM (Munic. Techn. Art Sch.). — *Principal*, J. Harrison, A.R.C.A.

OLDHAM (Munic. Techn. Sch.).—*Principal*, H. H. Wareing.

PAISLEY (Tech. Coll.).—*Princ.*, A. MacLean, B.Sc.

PETERBOROUGH (County Techn. Sch. for Soke). —*Head Master*, J. O. Sibree, B.Sc., A.M.I.E.E.

PLYMOUTH (Plymouth and Devonport Techn. Sch.).—*Principal*, W. S. Templeton, M.A., B.Sc.

PORTSMOUTH (Munic. Coll.).—*Principal*, Oliver Freeman, Wh.Sc., B.Sc.

PRESTON (Harris Inst.).—*Princ.*, T. R. Jolly, M.B.E., F.C.I.E.

ROCHDALE (Munic. Techn. Sch.).—*Princ. and Sec.*, J. E. Holden.

ROTHERHAM (Techn. Inst.).—*Principal*, James A. Mair.

SALFORD (Royal Technical Inst.).—*Principal*, Bertram Prentice, D.Sc.

SHEFFIELD University (*q.v.*).

SOUTHAMPTON (Hartley Univ. Coll., *q.v.*).

SOUTH WALES AND MONMOUTHSHIRE SCHOOL OF MINES, Treforest.—*Princ.*, Prof. G. Knox, F.C.S., M.I.M.E.

STOCKPORT (Munic. Techn. Sch.).—*Princ.*, R. J. Brown, M.Sc.

STOKE-ON-TRENT (Longton Sutherland Inst.).—*Principal*, J. H. Dickins. M.A.

SUNDERLAND (Munic. Techn. Coll.). — *Princ.*, V. A. Mundella, M.A., B.Sc.

SUTTON COLDFIELD (Munic. Techn. Sch.).—*Princ.*, H. Pochin, M.A.; *Actg. Princ.*, H. R. Fairweather, M.A.

SWANSEA (Techn. Coll.).—*Princ. (acting)*, T. Gilbert Jones, M.Sc.

SWINDON (Techn. Sch.).—*Princ.*, G. H. Burkhardt, M.Sc.

TONBRIDGE (Techn. Inst.).—*Principal*, T. Newsome, A.R.C.Sc.

TOTTENHAM (Polytechnic).—*Princ.*, H. B. Shallard, M.A.

TUNBRIDGE WELLS (Techn. Inst.).—*Princ.*, J. Lister, Ph.D., B.Sc.

WAKEFIELD (Techn. Sch.)—*Princ.*, S. Carter, B.Sc.

WALSALL (Munic. Inst.). — *Princ.*, F. E. Thompson, A.R.C.S., F.I.C., F.C.S.

WARRINGTON (Munic. Techn. Inst.). — *Princ.*, J. S. Broome, M.Sc.

WELLINGBOROUGH (Techn. Inst.).—*Princ.*, F. J. Thorpe, B.Sc.

WEST BROMWICH (Techn. Sch.).—*Princ.*, Ernest Rawson, B.Sc.

WEST HAM (Munic. Techn. Inst.).—*Princ.*, T. C. Baillie, M.A., D.Sc.

WIDNES (Munic. Techn. Sch.).—*Princ.*, Capt. T. H. Crabtree, B.Sc.

WIGAN (Mining and Techn. Coll.).—*Princ.*, S. C. Laws, M.A., M.Sc.

WOLVERHAMPTON (Munic. Techn. Sch.).—W. E. Fisher, D.Sc.
WORCESTER (Victoria Inst.).—*Sec.*, T. Duckworth.

SOCIOLOGY.

BARNETT HOUSE, Broad Street, Oxford.
President, The Master of Balliol.
Hon. Secs., Dr. A. J. Carlyle; Miss A. W. Thackeray.

RUSKIN COLLEGE, Walton Street, Oxford.
Principal, H. Sanderson Furniss, M.A.
Vice-Principal, R. H. Gretton, M.A.
Secretary, F. Smith.

THEOLOGICAL.

Church of England.

BIRKENHEAD (St. Aidan's). — *Principal*, Rev. R. T. Howard, M.A.
BURGH (St. Paul's Missionary Coll.).—*Principal*, Rev. Canon W. E. Boulter, M.A.
CAMBRIDGE (Ridley Hall).—*Principal*, Rev. A. J. Tait, D.D.

GLASGOW (United Free Church Coll.).—*Principal* Rev. Archibald Henderson, D.D.

Calvinistic Methodists.

ABERYSTWYTH.—*Principal*, Rev. T. C. Edwards, M.A.

BALA.—*Principal*

Unitarian.

MANCHESTER (Home Missionary College, Victoria Park).—*Princ.*, Rev. S. H. Mellone, D.Sc.

Moravian.

FAIRFIELD (Manchester).—*Principal*, Rev. A. H. Mumford, B.D.

Theology Unfettered by Dogma.

CARMARTHEN PRESBYTERIAN COLLEGE.—*Principal*, Walter J. Evans, M.A.

OXFORD (Manchester Coll.).—*Principal*, Rev. L. P. Jacks, LL.D., D.D.

JEWS' COLLEGE, Queen Square House, W.C. 1. *President*, Very Rev. Dr. J. H. Hertz (*Chief Rabbi*).
Principal, Prof. A. Büchler, Ph.D.
Secretary, Albert M. Hyamson.

TRAINING COLLEGES.

For Elementary Teachers.

M. = For Men ; *W.* = For Women.

ABERYSTWYTH (Day Training Coll.), *M.* & *W.*—*Principal*, J. H. Davies, M.A.

BANGOR COLL. (Teachers' Training Dept.), *M.* & *W.*—Sir Henry R. Reichel, LL.D.

BANGOR (Normal College), *M.* & *W.*—D. R. Harris, M.A.

BANGOR (N. Wales Tr. Coll., C. of E.), *W.*—Rev. Canon Fairchild, M.A.

BINGLEY Yorks, *W.*—Miss M. S. Lilley, M.A.

BIRMINGHAM UNIVERSITY (Training Dept.), *M.*—A. P. Braddock, M.A., B.Sc.

BIRMINGHAM UNIVERSITY (Training Dept.), *W.*—Miss M. Hammond, B.A.

BISHOP'S STORTFORD, Hockerill (C. of E.), *W.*—Miss A. D. Malden.

BRIGHTON (Munic. Tr. Coll.), *W.*—Miss Hartle, B.Sc.

BRIGHTON (C. of E.), *W.*—Miss H. M. Preston.

BRISTOL UNIVERSITY (Dept. of Education), *M.* & *W.*—Prof. Helen M. Wodehouse, M.A.

BRISTOL, Fishponds (C. of E.), *W.*—Rev. J. R. W. Thomas, M.A.

CAMBRIDGE (Homerton Coll.), *W.*—Miss M. M. Allan.

CARDIFF (Aberdare Hall Hostel), *W.*—Miss K. Hurlbatt.

CARMARTHEN (C. of E.), *M.*—Rev. A. W. Parry, M.A., D.Sc.

CHELTENHAM (Ladies' Coll.), *W.*—Miss L. M. Faithfull, M.A.

CHELTENHAM (St. Paul's, St. Mary's Hall, & The Priory Hostel, C. of E.), *M.* & *W.*—Rev. H. A. Bren, M.A.

CHESTER (Diocesan Tr. Coll.), *M.*—Rev. R. A. Thomas, O.B.E., M.A.

CHICHESTER (Bp. Otter Memorial Coll.) *W.*—Miss F. Johnson, M.A.

CREWE (Cheshire County Tr. Coll.), *M.* & *W.*—R. Delaney, B.A.

CULHAM, Abingdon (Oxford Diocesan), *M.*—Rev. Canon A. R. Whitham, M.A.

DARLINGTON (Brit. and Foreign Sch. Soc.), *W.*—Miss F. Hawtrey.

DERBY (C. of E.), *W.*—Rev. Canon Bater, M.A.

DUDLEY (Munic. Tr. Coll.), *W.*—J. Makepeace Forster, B.A., M.Litt.

DURHAM (Bede Coll., C. of E., Univ. Durham), *M.*—Rev. Donald Jones, B.D.

DURHAM (St. Hild's, C. of E.), *W.*—Miss Eleanor Christopher.

EXETER (City Tr. Coll.), *M.* & *W.*—Harry A. S. Wortley, M.A. ; Miss A. J. Walker, M.A.

EXETER (Diocesan Tr. Coll.), *M.*—Rev. R. L. Collins, M.A.

HEREFORD (County Tr. Coll.), *W.*—Miss S. M. Smith, M.A.

HULL (Newland, R.C.), *W.*—Margaret O'Hara.

LEEDS (University), *M.* & *W.*—M. E. Sadler, C.B.

LEEDS (Beckett's Park, City Tr. Coll.), *M.* & *W.*—J. R. Airey, M.A.

LINCOLN (C. of E.), *W.*—Mrs. F. Exton, M.A.

LIVERPOOL UNIVERSITY :—
(Hostel), *W.*—Miss D. Chapman, M.A.
(Hostel), *M.*—G. H. Turnbull, M.A.

LIVERPOOL (Ashton Rathbone Hostel), *M.*—P. M. Roxby.

LIVERPOOL (Edge Hill), *W.*—Miss Eva M. Smith.

LIVERPOOL (96 Mt. Pleasant, R.C.), *W.*—Miss Bellord.

LONDON UNIVERSITY :—
(London Day Tr. Coll.), *M.* & *W.*—John Adams, M.A., LL.D.
(Granville Pk., Lewisham, S.E., Kent, for Goldsmiths' Coll., Education Committee's Hostel), *W.*—Miss M. G. Carter, B.Sc.
(Grove Hostel, Blackheath, Goldsmiths' Coll., *M.*—Dr. R. T. White.
(St. Michael's Hostel, Grove Park, S.E. 12, Goldsmiths' College), *W.*—Miss Powell.
(Goldsmiths' Coll., New Cross), *M.* & *W.* T. Raymont, M.A.
(Surrey Hostel, Goldsmiths' Coll.), *W.*—Miss Sherriff, M.A.

LONDON COUNTY COUNCIL :—
(Avery Hill, Eltham, S.E. 9), *W.*—Miss E. M. Julian, M.A.
(Graystoke Place, E.C.), *W.*—Miss L. Brackenbury, M.A.
(Furzedown Coll., Mitcham Lane, S.W. 17), *W.*—Miss A. Lloyd Evans, M.A.

LONDON :—
BATTERSEA (St. John's, C. of E.), *M.*—Rev. G. H. Dix, M.A.
BATTERSEA (Southlands, Wesleyan), *W.*—Miss Brunyate, M.A.

ROYAL SOCIETY MEDALS.

THE following is a list of those to whom the Royal Society awarded medals in 1920. The awards of the Royal medals have received the King's approval. A *Royal* medal to Mr. W. Bateson, F.R.S., for his contributions to biological science, and especially his studies in genetics; a *Royal* medal to Prof. G. H. Hardy, F.R.S., for his researches in pure mathematics, particularly in the analytic theory of numbers and allied subjects. The *Copley* medal to Mr. H. T. Brown, F.R.S., for his work on the chemistry of carbohydrates, the assimilation of atmospheric carbon dioxide by leaves, and on gaseous diffusion through small apertures. The *Rumford* medal to Lord Rayleigh, F.R.S., for his work in physical chemistry, and more especially on the composition and constitution of alloys. The *Darwin* medal to Prof. R. H. Biffen, F.R.S., for his work on scientific principles applied to the breeding of plants. The *Hughes* medal to Prof. O. W. Richardson, F.R.S., for his work in experimental physics, and especially thermionics.
